The Top Features of CheckPoint 156-521 PDF Dumps File and Practice Test Software

It is our consistent aim to serve our customers wholeheartedly. Our 156-521 real exam try to ensure that every customer is satisfied, which can be embodied in the convenient and quick refund process. Although the passing rate of our 156-521 training quiz is close to 100%, if you are still worried, we can give you another guarantee: if you don't pass the exam, you can get a full refund. So there is nothing to worry about, just buy our 156-521 exam questions.

CheckPoint Check Point Certified Automation Specialist - R81.20 (CCAS) Sample Questions (Q50-Q55):

NEW QUESTION # 50

Which of the following API commands support pagination? (Choose two)

- A. add user
- B. show objects
- C. set host
- D. show access-rulebase

Answer: B,D

Explanation:

Both show objects and show access-rulebase can return large datasets. Pagination parameters like limit and offset are supported to control the volume of data returned in a single response.

NEW QUESTION # 51

How can you reduce parsing complexity when chaining multiple `mgmt_cli` calls in a script?

- A. Convert output to plain text
- B. Use `--verbose` mode
- C. Use `--format json with structured parsing`
- D. Enable GAiA shell

Answer: C

Explanation:

Using `--format json` ensures consistent and parseable output across all `mgmt_cli` commands, allowing easy extraction of fields between steps, particularly when automating workflows or condition-based logic.

NEW QUESTION # 52

Which of the following scripting environments are suitable for automating Gaia API operations?
(Choose two)

- A. Python with requests library
- B. SmartView
- C. Excel VBA
- D. Bash with curl

Answer: A,D

Explanation:

Python (using the requests module) and bash scripts (using curl) are commonly used for automating Gaia API tasks such as system configuration, interface changes, or routing updates.

NEW QUESTION # 53

Which CLI command is used to verify the status of the API server on a Check Point Management Server?

- A. show services
- B. api status
- C. `mgmt_cli status`
- D. api check

Answer: B

Explanation:

The `api status` command displays whether the Management API server is enabled and running. It also shows allowed client IP addresses and API version details, useful for troubleshooting API access issues.

NEW QUESTION # 54

After login, how can the session token be passed to future requests in Postman?

- A. Set in cookie jar
- B. As a JSON key in the request body
- C. Set `X-chkp-sid` to `{{session}}` in headers
- D. Append to the endpoint URL

Answer: C

Explanation:

In subsequent requests, the `X-chkp-sid` header should be set to `{{session}}`, referencing the stored session token in the environment variable.
