Our Plat-Dev-210 study questions will update frequently to guarantee that you can get enough test banks and follow the trend in the theory and the practice. That is to say, our product boosts many advantages and to gain a better understanding of our Salesforce Certified Omnistudio Developer guide torrent. It is very worthy for you to buy our product and please trust us. If you still can't fully believe us, please read the introduction of the features and the functions of our product as follow.

Salesforce Plat-Dev-210 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Flexcards: This section of the exam measures the skills of a Solution Architect and covers the ability to design and configure FlexCards based on specific business requirements. It evaluates the candidate's knowledge in selecting appropriate card styles, defining data sources and fields, and implementing user actions across different card states. Additionally, this domain tests the understanding of constructing the underlying JSON data structure that powers the FlexCards framework, ensuring that the configured cards meet both functional and technical specifications.
Topic 2	<ul style="list-style-type: none">Omniscritps: This portion of the exam measures the skills of a Business Analyst and focuses on the use of OmniScripts to create dynamic, guided user experiences. It includes comparing and contrasting various OmniScript elements and their configurations to fulfill given use cases. The section also examines the candidate's understanding of the JSON structure that supports OmniScripts, as well as the ability to select appropriate elements and properties to address functional requirements effectively.
Topic 3	<ul style="list-style-type: none">Integrated Troubleshooting and Deployment: This final section measures the skills of a Support Engineer and focuses on identifying and resolving issues within Omnistudio tools. It involves diagnosing errors based on given scenarios and determining where breakdowns occur in the data flow for specific customer issues. This ensures the candidate can effectively troubleshoot, debug, and maintain solutions to ensure optimal performance and reliability.

Topic 4	<ul style="list-style-type: none"> • Integration Procedures: This section measures the skills of an Integration Architect and involves designing and configuring Integration Procedures to automate processes and integrate systems. It requires comparing and contrasting different elements and configurations within Integration Procedures to meet specific use cases. Candidates are also tested on selecting the correct elements and properties to satisfy functional requirements, ensuring seamless data flow and process automation.

100% Pass 2026 Salesforce Plat-Dev-210 –Trustable Online Training Materials

Our company also arranges dedicated personnel to ensure the correctness of our Plat-Dev-210 learning quiz. As you know, our Plat-Dev-210 study materials are certified products and you can really use them with confidence. On one hand, our company always hire the most professional experts who will be in charge of compiling the content and design the displays. On the other hand, we will ask for some volunteers to study with our Plat-Dev-210 learning prep to test the pass rate.

Salesforce Certified Omnistudio Developer Sample Questions (Q67-Q72):

NEW QUESTION # 67

A developer creates a new FlexCard to display customer data and actions, such as updating billing information and changing the contact for the customer account. The FlexCard contains 10 fields and 5 actions.

During testing, several fields display with the correct data, but one of the fields shows only the label.

What could cause this?

- A. The fields have exceeded the maximum number allowed on the card.
- B. {recordId} is misspelled in the Data Source Input Map.
- C. There are no test parameters configured.
- **D. The field is null on the Salesforce record.**

Answer: D

Explanation:

According to the FlexCard Designer Overview page, another possible cause of a field showing only the label is that "the field is null on the Salesforce record".

NEW QUESTION # 68

- **A.**
- B.

Answer: A

Explanation:

The correct answer is Option B, which shows a FlexCard with a header, a body, and a footer. The header contains the title and the icon of the FlexCard. The body contains a Data table element that displays the records from the parent FlexCard. The footer contains a navigation Action that invokes an OmniScript.

Option A is incorrect because it shows a FlexCard with only a header and a body, and no footer.

NEW QUESTION # 69

An Integration Procedure uses an HTTP action to make a REST API call. The response from the REST API must be converted into a specific XML structure before sending it as an input to another external web service.

How should the developer configure the Integration Procedure to meet this requirement?

- A. Use a Data Mapper Extract and check the XML checkbox on the Output JSON Path.
- B. Use a Remote Action that calls the XMLStreamReader class.

- C. Use a Remote Action that calls the XMLStreamWriter class.
- D. Use a Data Mapper Transform to convert JSON to XML.

Answer: C

Explanation:

OmniStudio does not natively support direct JSON-to-XML transformation using DataRaptors. When a transformation to specific XML formats is needed for integration with external web services, it is recommended to use Remote Actions that invoke custom Apex classes.

* A. Use a Remote Action that calls the XMLStreamWriter class - Correct. The XMLStreamWriter Apex class provides precise control over XML structure and is the Salesforce-recommended way to programmatically generate XML from data within a Remote Action step in an Integration Procedure.

Incorrect Options:

* B. The XML checkbox in DataRaptor does not convert JSON to XML; it defines output data format for display or API serialization.

* C. XMLStreamReader is used for parsing XML, not for generating it.

* D. DataRaptor Transforms only manipulate JSON structure; they do not support converting JSON into XML format.

:

Salesforce Developer Guide # Apex XMLStreamWriter Class

OmniStudio Integration Procedures # Using Remote Actions with Custom Apex

NEW QUESTION # 70

A developer needs to build a multi-step intake form. Each step must allow the user to cancel the intake at any time. The developer is using an LWC OmniScript to build the form.

How should the developer implement the cancel functionality for all steps using the LWC OmniScript Designer?

- A. Add a navigation Action inside each step and set the Component name to "Cancel",
- B. Add a navigation Action outside each step and set the Element Name to "Cancel",
- C. Add a navigation Action inside each step and set the Element Name to "Cancel",
- D. Check the Enable Cancel checkbox in the Setup tab under Cancel Options.

Answer: D

Explanation:

Checking the Enable Cancel checkbox in the Setup tab under Cancel Options allows the developer to enable the cancel functionality for all steps in the OmniScript. The user can cancel the OmniScript at any time by clicking the Cancel button in the top right corner of the OmniScript. Adding a navigation Action inside each step is not necessary and would clutter the OmniScript design. Setting the Component name or Element Name to "Cancel" has no effect on enabling the cancel functionality.

NEW QUESTION # 71

A developer creates an OmniScript to update billing information. After analyzing the different types of customer interactions that occur at the company, the developer determines updating billing information should be included in the majority of customer interactions, which are represented by more than 20 different FlexCards.

What is the most efficient way for the developer to configure the action that invokes the OmniScript?

- A. As an OmniStudio Action
- B. As a Custom Action
- C. As an OS Action
- D. As a Lightning Action

Answer: C

Explanation:

An OS Action is the most efficient way to configure the action that invokes the OmniScript, as it allows the developer to reuse the same OmniScript across multiple FlexCards without creating separate actions for each one. A Custom Action is used to invoke a custom Apex class or Lightning web component. An OmniStudio Action is used to invoke an Integration Procedure or a Calculation Procedure. A Lightning Action is used to invoke a Lightning component or a Visualforce page.

NEW QUESTION # 72

.....

We talked with a lot of users about Plat-Dev-210 practice engine, so we are very clear what you want. You know that the users of Plat-Dev-210 training materials come from all over the world. The quality of our products is of course in line with the standards of various countries. You will find that the update of Plat-Dev-210 learning quiz is very fast. You don't have to buy all sorts of information in order to learn more. Plat-Dev-210 training materials can meet all your needs. What are you waiting for?
