Salesforce Order Management Administrator Accredited Professional Sample Questions (Q69-Q74):

NEW QUESTION # 69

What are two reasons an admin should choose an Event over a Trigger when it comes to building out a solution?

- A. Events cannot be subscribed to in a batch for bulk operations
- B. Events are asynchronous
- C. Events do not participate in a transaction scope
- D. Event order is not guaranteed within a topic

Answer: B,C

Explanation:

Two reasons an admin should choose an Event over a Trigger when it comes to building out a solution are:

Events are asynchronous. This means that events are processed in the background, without blocking the main execution thread. This can improve the performance and user experience of the solution, as well as avoid governor limits and timeouts.

Events do not participate in a transaction scope. This means that events are independent of the transaction that publishes them, and they do not affect the rollback or commit behavior of the transaction. This can avoid unwanted side effects and errors in the solution, as well as decouple the logic from the data.

NEW QUESTION # 70

An administrator is setting up Order Management in a development org. The administrator is using Workbench to create test orders but the corresponding Order Summaries are not being created. What could be the issue?

- **A. The Create Order Summary flow is not activated**
- B. The administrator did not set the "CreateOrderSummary" attribute to TRUE in the API call in workbench when posting the orders
- C. Order Summary has been disabled in the Order Management settings in Setup
- D. The Order object trigger is not activated

Answer: A

NEW QUESTION # 71

A developer is creating a flow to generate Fulfillment Orders for Order Summaries. What object is used to generate the Fulfillment Groups?

- **A. Order Product Summaries**
- B. Order Fulfillment Summaries
- C. Products
- D. Fulfillment Summaries

Answer: A

NEW QUESTION # 72

How can an administrator synchronize licenses from the production org when preparing a sandbox for development?

- A. Use a custom shell script
- B. Export a Change Set
- **C. Run the Match Production Licenses to Sandbox without a Refresh tool in Setup**
- D. Import a Change Set

Answer: C

Explanation:

The best way for an administrator to synchronize licenses from the production org when preparing a sandbox for development is to run the Match Production Licenses to Sandbox without a Refresh tool in Setup. This tool allows administrators to match their sandbox licenses with their production licenses without refreshing their sandbox. This way, the administrator can ensure that the sandbox has the same number and type of licenses as the production org, and avoid any license-related issues when developing or testing in the sandbox.
