If you are a busy individual, you will have a short time to sit and study properly for the User-Experience-Designer exam. Finding the best route to quick learning is important because you are not a genius who can cover everything before the final attempt. You have to memorize real Salesforce Certified User Experience Designer (User-Experience-Designer) questions that will appear in the final User-Experience-Designer test. In this way, you can quickly prepare for the User-Experience-Designer examination.

Salesforce User Experience Designer certification exam covers a range of topics such as design thinking, user research, prototyping, and usability testing. It also covers the best practices for designing user interfaces and user experiences for applications developed using Salesforce. Salesforce Certified User Experience Designer certification exam is intended for individuals who have a basic understanding of Salesforce and experience in designing user interfaces and experiences.

Salesforce User-Experience-Designer Exam is designed to test the knowledge and skills of a user experience designer who can design and develop user interfaces for the Salesforce platform. User-Experience-Designer exam focuses on various aspects of user experience design, such as user research, user interface design, usability testing, and accessibility compliance. User-Experience-Designer exam is designed to test the candidate's ability to design user interfaces that are intuitive, easy to use, and aesthetically pleasing.

By compiling our User-Experience-Designer prepare torrents with meticulous attitude, the accuracy and proficiency of them is nearly perfect. As the leading elites in this area, our User-Experience-Designer prepare torrents are in concord with syllabus of the exam. They are professional backup to this fraught exam. So by using our User-Experience-Designer Exam torrents made by excellent experts, the learning process can be speeded up to one week. They have taken the different situation of customers into consideration and designed practical User-Experience-Designer test braindumps for helping customers save time. As elites in this area they are far more proficient than normal practice materials' editors, you can trust them totally.

Salesforce Certified User Experience Designer Sample Questions (Q35-Q40):

NEW QUESTION # 35
Cloud kicks wants to incorporate human-centered design across its organization.
Which two practices should be adopted?

- A. Observing user behavior
- B. Including Innovative ideas to showcase technology
- C. Creating requirements based business leaders' priorities
- D. Putting oneself in the situation of the end user

Answer: A,D

Explanation:
Human-centered design is a practice where designers focus on people and their context, and seek to understand and solve the right problems for them. Human-centered design involves the following elements1:
* Empathy. Designers need to genuinely care about the people they design for, and build empathy by immersing themselves in the community that will use their products or services.
* Creativity. Designers need to find creative ways to solve users' problems, and generate multiple ideas and prototypes that can be tested and refined.
* Business needs. Designers need to make their products or services commercially successful, and align them with the goals and values of the organization.
To incorporate human-centered design across its organization, Cloud Kicks should adopt the following two practices:
* Observing user behavior. Designers should conduct user research and communicate with their users regularly, to understand their needs, motivations, challenges, and goals. Observing user behavior can help designers to identify the pain points and opportunities for improvement, and to validate their assumptions and hypotheses.
* Putting oneself in the situation of the end user. Designers should empathize with their users, and try to see the world from their perspective. Putting oneself in the situation of the end user can help designers to create products or services that are relevant, useful, and desirable for them.
The following two practices are not aligned with human-centered design, and should be avoided:
* Including innovative ideas to showcase technology. Designers should not prioritize technology over people, and should not include features or functions that are not necessary or beneficial for the users.
Including innovative ideas to showcase technology can lead to products or services that are complex, confusing, or frustrating for the users.
* Creating requirements based on business leaders' priorities. Designers should not ignore the voice of the users, and should not create products or services that only satisfy the business needs. Creating requirements based on business leaders' priorities can lead to products or services that are irrelevant, useless, or undesirable for the users.

NEW QUESTION # 36
A UX Designer is creating a site for delivery within Builder for a customer who has strict requirements is stay focused on out-of-the-box styling and components only.
Which three methods would deliver a branded experience?
Choose 3 answers

- A. Select a theme and customize content including copy and imagery.
- B. Display custom variations of pages based on user behavior.
- C. Select a footer and configure which social media links to display.
- D. Use the theme editor to adjust fonts, text case, colors, and site logo.
- E. Create flexible layouts for pages with unique background images.

Answer: B,C,E

NEW QUESTION # 37
Cloud Kicks marketing development representatives need to process incoming leads. Understanding the typical lead to opportunity is essential to the design.
Which three new records would typically be created when they convert a lead?
Choose 3 answers

- A. Account
- B. Contact
- C. Opportunity
- D. Activity
- E. Converted Lead

Answer: A,B,C

Explanation:
When a lead is converted in Salesforce, three new records are typically created: a contact, an account, and an opportunity. A contact is a person who is associated with an account and has a role in a sales process. An account is a company or organization that is a potential or existing customer. An opportunity is a sales deal that is in progress or has been closed. These records are linked together and use the information from the lead record. The lead record becomes read-only and is marked as converted. References:

NEW QUESTION # 38
A developer is creating a Lightning Web Component (LWC) and wants to make sure the visual experience is consistent with Cloud Kicks' branding. The developer asks their UX Designer about the Salesforce Lightning Design System (SLDS) styling hooks.
How should the designer describe them?

- A. They use standard CSS properties to directly style HTML elements.
- B. They use standard CSS properties to easily style base and custom components.
- C. They use custom CSS properties to directly style HTML elements.
- D. The use custom CSS properties to easily style case and custom component.

Answer: D

Explanation:
The designer should describe SLDS styling hooks as custom CSS properties that can easily style base and custom components. Styling hooks are placeholders in the SLDS style sheet that allow developers to customize the look and feel of their Lightning components by using the corresponding CSS custom properties.
For example, the developer can change the background color of a button by setting the value of the
--slds-c-button-brand-color-background custom property. Styling hooks are especially useful when working with web components and shadow DOM, as they enable component-level customizations without affecting the global styles. Styling hooks also provide consistency and performance benefits, as they leverage the SLDS design tokens and the native browser support for CSS custom properties. References:
* : Styling Hooks - Lightning Design System
* : SLDS Styling Hooks | Lightning Web Components Developer Guide | Salesforce Developers
* : SLDS Styling hooks in Lightning web components - Forcetrails
The designer should describe the Salesforce Lightning Design System (SLDS) styling hooks as using standard CSS properties to easily style base and custom components. SLDS styling hooks allow developers to quickly and easily apply CSS classes to HTML elements, enabling consistent styling across both base and custom components. This allows developers to quickly and easily apply branding and styling to their Lightning Web Components, without needing to write custom CSS. For more information about SLDS styling hooks, please see the following Salesforce documentation: https://developer.salesforce.com/docs/component-

library/documentation/lwc/lwc.use_slds_styles

NEW QUESTION # 39

Cloud Kicks (CK) has not migrated to Lightning Experience but wants to leverage the Salesforce Lightning Design System (SLDS) in its custom applications.
Which three solutions should CK's designers use to deliver applications with a consistent Lightning Experience Look and feel?
Choose 3 answers

- A. Lightning Stylesheets for Visualforce
- B. iOS Static Library
- C. Standard Design Tokens
- D. Heroku
- E. Local Development Server

Answer: A,C,D

Explanation:
Explanation
Cloud Kicks (CK) can use the following three solutions to leverage the Salesforce Lightning Design System (SLDS) in its custom applications, without migrating to Lightning Experience:
Lightning Stylesheets for Visualforce: This solution allows CK to apply the SLDS styles to its existing Visualforce pages, without having to rewrite the markup or use a static resource. By adding the attribute lightningStylesheets="true" to the <apex:page> tag, CK can automatically transform the standard Visualforce components into their SLDS equivalents, and give the pages a consistent Lightning Experience look and feel12.
Standard Design Tokens: This solution allows CK to use the SLDS design tokens, which are predefined variables that store the visual design attributes of the SLDS, such as colors, fonts, sizes, and spacing. By using the design tokens, CK can ensure that its custom applications follow the SLDS guidelines and remain consistent with the Lightning Experience theme. CK can access the design tokens through the Lightning Design System Scoping tool, or by downloading them as a static resource3 .
Heroku: This solution allows CK to build and deploy its custom applications on Heroku, a cloud platform that supports various languages and frameworks, such as Node.js, Java, or PHP. By using Heroku, CK can leverage the SLDS resources, such as the base components, the tokens, and the design patterns, to create web applications that have a consistent Lightning Experience look and feel. CK can also use the Lightning Out feature to embed Lightning components into its Heroku applications, and use the Lightning Web Components framework to create reusable UI elements .
