Realistic Plat-Dev-210 Exam Simulations & Free PDF Quiz 2026 Salesforce Test Salesforce Certified Omnistudio Developer Engine

With all Plat-Dev-210 practice materials being brisk in the international market, our Plat-Dev-210 practice materials are quite catches with top-ranking quality. But we do not stop the pace of making advancement by following the questions closely according to exam. So our experts make new update as supplementary updates. During your transitional phrase to the ultimate aim, our Plat-Dev-210 practice materials as well as these updates are referential. Those materials can secede you from tremendous materials with least time and quickest pace based on your own drive and practice to win. Those updates will be sent to you accordingly for one year freely.

Salesforce Certified Omnistudio Developer Sample Questions (Q85-Q90):

NEW QUESTION # 85

A developer needs to retrieve data from an external system that stores policy data. The external system supports REST APIs to access and update the policies. Due to the volume of the policy data and peak hours of hours of business, calls to the REST APIs sometimes take longer than expected to response.

The developer creates an Integration Procedure to retrieve the policy data for use in an OmniScript.

Given the external system's known performance issues, which configuration should be used to implement the call to the external system?

Choose 2 answers

- A. Configure a Remote action with timeout settings of 120000
- **B. Set the Timeout property on the HTTP Action in the Integration Procedure**
- **C. Check the Chain on Step Check on the HTTP Action in the Integration Procedure**
- D. Check the Chainable checkbox on the integration procedure Action in the OmniScript

Answer: B,C

Explanation:

Setting the Timeout property on the HTTP Action in the Integration Procedure allows the developer to specify how long to wait for a response from the external system before timing out. Checking the Chain on Step Check on the HTTP Action in the Integration Procedure allows the developer to chain multiple HTTP Actions together and execute them sequentially. Configuring a Remote action with timeout settings of 120000 is not necessary, as it is already done by default in OmniStudio. Checking the Chainable checkbox on the integration procedure Action in the OmniScript has no effect on calling an external system.

NEW QUESTION # 86

Refer to the exhibit below.

In this Integration Procedure structure, which Send JSON Path should be used to send the output of the Action1 element to a Remote Action?

- A. BlockA:BlockB:Action1
- B. Action1:BlockB:BlockA
- **C. BlockA.BlockB.Action1**
- D. Action1.BlockB.BlockA

Answer: C

Explanation:

In OmniStudio Integration Procedures, when you want to reference the output of an element in a nested block (e.g., for use in a Remote Action or another step), you must use dot notation that mirrors the block structure hierarchy.

In the exhibit:

* Action1 is nested inside:

* BlockB, which is nested inside:

* BlockA

Therefore, the correct Send JSON Path to access the result of Action1 is:

CopyEdit

BlockA.BlockB.Action1

This format complies with the standard output reference syntax in Integration Procedures, which follows the pattern:

php-template

CopyEdit

<ParentBlock>.<ChildBlock>.<ActionElement>

Incorrect Options:

* B. BlockA:BlockB:Action1 - Uses colons instead of dots. This is invalid syntax in JSON path resolution within Integration Procedures.

* C. Action1:BlockB:BlockA - Incorrect order and invalid separators.

* D. Action1.BlockB.BlockA - Incorrect order (reversed path).

NEW QUESTION # 87

A developer configures a FlexCard with a Data Mapper data source that uses the params.id as an input. When the developer clicks

"View Data" on the FlexCard, valid data displays. However, when the developer previews the layout, the FlexCard does not display.

What could cause this error?

Choose 2 answers

- A. The Attributes haven't been configured to pass the data to the fields.
- **B. There is no Salesforce record for the FlexCard based on the RecordId in the layout's Test Data Source Settings.**
- C. The RecordId in the Test Data Source Settings is for the wrong record type.
- **D. The Data Node field for the FlexCard is empty.**

Answer: B,D

Explanation:

This scenario relates to FlexCard preview behavior and data mapping issues.

* B. There is no Salesforce record for the FlexCard based on the RecordId in the layout's Test Data Source Settings - If the test record does not exist, the FlexCard will not display any data during preview. This is a common setup mistake.

* C. The Data Node field for the FlexCard is empty - The Data Node field must be set correctly to match the JSON node where the expected data resides. If it is empty or incorrect, the FlexCard won't bind data to UI elements.

Incorrect Options:

* A. Even if the RecordId is from a different record type, as long as the data structure aligns, it would still render; it's not a definitive reason for the card failing to display.

* D. Attributes are not required to display field values directly; they are used for passing data between cards or from context, not for direct field rendering.

NEW QUESTION # 88

A developer needs to configure an Expression Set to calculate the sum of the entire BasePrice.

What is the most efficient way for the developer to meet this requirement?

- **A. Add an Aggregation Step as SUM(BasePrice).**
- B. Add a Sub Expression step as SUM(BasePrice).
- C. Add a Calculation Step as SUM(BasePrice).

Answer: A

Explanation:

The Expression Set component in OmniStudio allows developers to perform calculations using steps such as Aggregation, Calculation, and Sub Expression.

* C. Add an Aggregation Step as SUM(BasePrice) - This is correct. Aggregation steps are specifically designed to perform functions like SUM, AVG, COUNT, MIN, MAX over collections (arrays) of data. In this use case, summing the entire BasePrice array is best handled using an Aggregation Step.

Incorrect Options:

* A. Sub Expression Step is used to combine or manipulate previously calculated values, not to aggregate across an array.

* B. Calculation Step is used for row-level calculations, not aggregation across multiple rows.

:

Salesforce OmniStudio Documentation # Expression Sets # Aggregation Step

NEW QUESTION # 89

A developer creates an Integration Procedure with a Set Values and a DataRaptor Extract Action that requires AccountId as a key.

When the developer previews the Integration Procedure, the developer enters the AccountId correctly and execute the Preview. The developer sees the data extract by the DataRaptor in the Debug Log, but the response is empty.

What is the likely cause of this issue?

- A. The DataRaptor Action did not have the add response Ro Response JSON property set to true.
- B. The AccountId used for the preview is invalid.
- **C. A Response Action was not added to the integration Procedure.**
- D. The Response cannot be previewed directly.

Answer: C

Explanation:

According to the OmniStudio Developer Guide, "To return a response from an Integration Procedure, add a Response action as the last action in your Integration Procedure." Therefore, the correct answer is C.

NEW QUESTION # 90

.....

Free4Dump is a leading platform in this area by offering the most accurate Plat-Dev-210 exam questions to help our customers to pass the exam. And we are grimly determined and confident in helping you. With professional experts and brilliant teamwork, our Plat-Dev-210 practice materials have helped exam candidates succeed since the beginning. To make our Plat-Dev-210 simulating exam more precise, we do not mind splurge heavy money and effort to invite the most professional teams into our group.
