

Exam Dumps C-DBADM-2601 Zip | Latest C-DBADM-2601 Exam Cost

P.S. Free 2026 SAP C-DBADM-2601 dumps are available on Google Drive shared by Itcertking: <https://drive.google.com/open?id=13wLDQHFLFGm29SsFx9YBc0f1M3DL-Kolo>

Our company has the highly authoritative and experienced team. In order to let customers enjoy the best service, all C-DBADM-2601 exam prep of our company were designed by hundreds of experienced experts. Our C-DBADM-2601 test questions will help customers learn the important knowledge about exam. If you buy our products, it will be very easy for you to have the mastery of a core set of knowledge in the shortest time, at the same time, our C-DBADM-2601 Test Torrent can help you avoid falling into rote learning habits. You just need to spend 20 to 30 hours on study, and then you can take your exam. In addition, the authoritative production team of our C-DBADM-2601 exam prep will update the study system every day in order to make our customers enjoy the newest information.

SAP C-DBADM-2601 Exam Syllabus Topics:

Section	Objectives
Topic 1: Monitoring and Performance Tuning	- Resource management - System monitoring tools (HANA Cockpit) - Performance analysis and troubleshooting
Topic 2: SAP HANA Architecture and Core Concepts	- In-memory database concepts - SAP HANA system architecture overview - Tenant and system database concepts
Topic 3: Database Administration	- Schema and object administration - Backup and recovery operations - User and role management
Topic 4: Installation and Configuration	- SAP HANA installation procedures - Initial configuration and setup
Topic 5: Security and Authorization	- Security roles and privileges - Authentication and authorization concepts

SAP C-DBADM-2601 Exam Questions in Convenient PDF Format

Itcertking is a website to provide a targeted training for SAP certification C-DBADM-2601 exam. Itcertking is also a website which can not only make your expertise to get promoted, but also help you pass SAP certification C-DBADM-2601 exam for just one

time. The training materials of Itcertking are developed by many IT experts' continuously using their experience and knowledge to study, and the quality is very good and have very high accuracy. Once you select our Itcertking, we can not only help you pass SAP Certification C-DBADM-2601 Exam and consolidate their IT expertise, but also have a one-year free after-sale Update Service.

SAP Certified - Database Administrator - SAP HANA Sample Questions (Q179-Q184):

NEW QUESTION # 179

A regional medical equipment distributor restarts SAP HANA after a maintenance window. SAP HANA cockpit shows the database as available, and a small set of administrator checks passes. However, the configuration worksheet requires a post-start parameter verification, and the validation note still contains the parameter values captured before maintenance. A warehouse analytics user confirms that one dashboard opens successfully.

The constraint is that the administrator must close the maintenance window only after confirming the active configuration state. General availability and one successful dashboard cannot substitute for validation that the configured runtime values match the expected post-maintenance baseline.

What should the administrator do next?

- A. Close the maintenance window because SAP HANA cockpit shows availability and the dashboard opens.
- B. Restore the pre-maintenance parameter values because they already appear in the validation note.
- C. Ask more users to open dashboards so runtime configuration can be validated through workload access.
- **D. Verify the active post-start parameter values, update the validation note, and close the window only after configuration evidence matches the expected baseline.**

Answer: D

Explanation:

Feedback:

This addresses the configuration validation layer. Verifying active post-start values and updating the note aligns startup completion, runtime configuration, documented evidence, and maintenance closure.

NEW QUESTION # 180

CHALLENGE 1 - Plant Wave Configuration Evidence Alignment

The rollout coordinator wants to approve the next plant wave because the reporting outputs look consistent at a high level. The administration team has not confirmed whether the upgraded pilot system and newly installed wave database have comparable configuration records. Which decision best supports rollout readiness?

- A. Approve the wave because output consistency is the strongest evidence of database readiness.
- B. Approve the wave and document configuration differences only if users report data delays.
- **C. Confirm comparable configuration records before using the reporting outputs for release approval.**
- D. Use the SAP HANA Cloud provisioning record to complete the missing pilot system evidence.

Answer: C

Explanation:

Feedback:

Comparable configuration records should be confirmed before reporting outputs support release approval. The scenario requires evidence that the systems were evaluated under documented database states.

NEW QUESTION # 181

A digital publishing company operates SAP HANA for subscriber activity reporting. Users report that dashboards are available, but refresh times vary sharply during the morning reporting window. SAP HANA cockpit shows no service outage, while monitoring history shows a recurring peak in expensive statement activity from a reporting workload. The database team is asked to increase system capacity immediately because the reports are business-critical.

The constraint is that the administrator must identify the execution pattern before recommending a capacity or scheduling change. The business requires stable refresh times, but the system must remain available during investigation.

Which action best fits the observed performance evidence?

- **A. Review the expensive statement pattern and workload timing, then apply a targeted scheduling or workload adjustment**

based on validated evidence.

- B. Increase capacity immediately because dashboard variability always indicates insufficient database resources.
- C. Restart SAP HANA during the reporting window so existing expensive statements are cleared before users refresh dashboards.
- D. Disable the reporting workload until the next maintenance window so all expensive statements are removed from the system.

Answer: A

Explanation:

Feedback:

This acts on the monitored execution evidence before changing the operating model. Reviewing expensive statement behavior and timing supports a targeted correction that links workload activity, resource use, and dashboard refresh validation.

NEW QUESTION # 182

A regional insurance claims processor runs SAP HANA for daily operational reporting. After a scheduled workload increase, SAP HANA cockpit shows higher memory usage and slower report response times. The alert list shows a threshold warning, but the operations note only records that reports are "slow." A support analyst proposes increasing the threshold so the warning no longer appears.

The constraint is that the administrator must determine whether the warning represents a real workload pattern requiring follow-up or only an alert configuration mismatch. The response must preserve monitoring usefulness for future workload changes.

Which action best addresses the monitoring issue?

- A. Restart the database so memory usage returns to normal before the next reporting cycle.
- B. Correlate the alert timing with workload and memory behavior, update the monitoring evidence, and adjust thresholds only if the observed baseline supports it.
- C. Disable the alert temporarily so operational reports can continue without monitoring noise.
- D. Increase the alert threshold immediately because users already reported slow response times.

Answer: B

Explanation:

Feedback:

This validates the performance signal before changing monitoring configuration. Correlating alert timing, workload behavior, memory evidence, and threshold settings preserves useful monitoring while supporting a justified adjustment.

NEW QUESTION # 183

CHALLENGE 3 - Freight Cloud Readiness Boundary

The project team wants to approve cloud migration planning using three facts: the SAP HANA Cloud database is provisioned, freight sample data is loaded, and on-premises cutover reports run successfully. Which validation step is still required?

- A. Stop on-premises cutover validation because the future reporting direction is cloud-based.
- B. Treat the freight sample dataset as proof that cloud monitoring and recovery evidence are complete.
- C. Confirm cloud administration readiness evidence for the freight sample dataset scope.
- D. Approve migration planning because the three facts cover the full readiness chain.

Answer: C

Explanation:

Feedback:

Cloud administration readiness evidence is still required for the freight sample dataset scope. Provisioning and data loading support planning, but they do not complete cloud readiness validation.

NEW QUESTION # 184

.....

As a prestigious platform offering practice material for all the IT candidates, Itcertking experts try their best to research the best valid and useful C-DBADM-2601 exam dumps to ensure you 100% pass. The contents of C-DBADM-2601 exam training material

cover all the important points in the C-DBADM-2601 Actual Test, which can ensure the high hit rate. You can instantly download the C-DBADM-2601 practice dumps and concentrate on your study immediately.
