You can try the CompTIA 220-1101 exam dumps demo before purchasing.

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q230-Q235):

NEW QUESTION # 230

A laptop PC user is reporting issues with the hard drive. A filesystem check shows that all files are accessible and the filesystem is clean. After the check, the PC still issues a hard drive error message. Which of the following is the MOST likely cause of the error?

- A. S.M.A.R.T failure
- B. RAID failure
- C. DIMM failure
- D. IOPS failure

Answer: A

Explanation:

Explanation

If the filesystem check shows that all files are accessible and the filesystem is clean, but a hard drive error message persists, it's possible that the hard drive is experiencing S.M.A.R.T. (Self-Monitoring, Analysis, and Reporting Technology) failure. This is a warning system built into hard drives to alert users of potential issues before they become critical. NEW QUESTION # 231

A user's touch-screen tablet is having an issue with the screen orientation. Which of the following is MOST likely causing this issue?

- A. The touch-screen digitizer is malfunctioning
- B. The screen rotation is locked
- C. The inverter is misconfigured
- D. The screen protector on the tablet is damaged

Answer: B

Explanation:

The screen rotation is locked. If a user's touch-screen tablet is having an issue with screen orientation, it could be due to screen rotation being locked in device settings. If the screen rotation is locked, the touch-screen tablet will not rotate the screen when the device is turned.

This can usually be unlocked in the settings or by pressing a specific key combination.

NEW QUESTION # 232

An IT manager is requesting that the company buy new cables to be used with F-type connectors that are already in house. Which of the following cables should the company buy?

- A. Coaxial out
- B. Plenum
- C. Cat 5e
- D. Fiber

Answer: A

Explanation:

The company should buy Coaxial cables to be used with F-type connectors.

NEW QUESTION # 233

A small office has a wireless network with several access points for roaming laptop use. Users occasionally report that the wireless connection drops or becomes very slow. Users have confirmed that this issue only happens when connected to the office wireless network. Which of the following would MOST likely be the cause?

- A. Ethernet port flapping
- B. Hidden SSID
- C. High ISP latency

- **D. Device interference**

Answer: D

Explanation:

Device interference is the most likely cause of the wireless connection dropping or becoming slow.

Interference can come from other wireless devices, microwave ovens, or physical barriers like walls and metal objects. Hidden SSID, Ethernet port flapping, and high ISP latency are not likely to cause this issue.

Wireless interference from other devices can cause a drop in wireless connection speed and stability. In a small office environment, there may be several wireless devices competing for the same bandwidth, causing the issues described. NEW QUESTION # 234

A new computer was plugged into a port that was used by a legacy network printer prior to the completion of an office remodeling project. The user who was assigned to the new computer has been reporting an issue with slow network speeds. A technician verified the NIC is functioning properly and the drivers are up to date, and then swaps out the Cat 6 patch cable. However, the issue persists. Which of the following troubleshooting steps should the technician take NEXT?

- A. Verify which port the VLAN is assigned to.
- B. Ensure settings within the computer's BIOS.
- **C. Check the speed and duplex settings on the switch.**
- D. Replace the cable that runs from the user's desk to the patch panel.

Answer: C

NEW QUESTION # 235

.....
