

# Clear F5CAB1 Exam - Exam F5CAB1 Pattern

BONUS!!! Download part of DumpsActual F5CAB1 dumps for free: <https://drive.google.com/open?id=1ounIoN4lXYNKWaIMVHWyT4tmNUiAapuv>

We provide the F5 F5CAB1 exam questions in a variety of formats, including a web-based practice test, desktop practice exam software, and downloadable PDF files. DumpsActual provides proprietary preparation guides for the certification exam offered by the BIG-IP Administration Install, Initial Configuration, and Upgrade (F5CAB1) exam dumps. In addition to containing numerous questions similar to the BIG-IP Administration Install, Initial Configuration, and Upgrade (F5CAB1) exam, the BIG-IP Administration Install, Initial Configuration, and Upgrade (F5CAB1) exam questions are a great way to prepare for the F5 F5CAB1 exam dumps.

## F5 F5CAB1 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• <b>BIG IP Administration Control Plane Administration:</b> This section of the exam measures skills of System Administrators and covers managing the control plane where BIG IP is configured and administered. It includes working with user accounts, roles, device settings, configuration management, and using the graphical interface and command line for daily administrative tasks.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>BIG IP Administration Data Plane Configuration:</b> This section of the exam measures skills of System Administrators and covers configuring BIG IP objects that control data plane behavior. It focuses on setting up virtual servers, pools, nodes, monitors, and profiles so that applications are delivered reliably and efficiently according to design requirements.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>BIG IP Administration Data Plane Concepts:</b> This section of the exam measures skills of Network Administrators and covers how BIG IP handles application traffic on the data plane. It includes understanding flow of traffic, key data path components, basic concepts of load balancing, and how security and performance features affect user traffic.</li> </ul>

Topic 4	<ul style="list-style-type: none"> <li>• <b>BIG IP Administration Install Initial Configuration and Upgrade:</b> This section of the exam measures skills of System Administrators and covers the lifecycle tasks for deploying and maintaining a BIG IP system. It includes installing the platform, performing initial setup, applying licenses, configuring basic networking, and planning and executing software upgrades and hotfixes.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>BIG IP Administration Support and Troubleshooting:</b> This section of the exam measures skills of Network Administrators and covers identifying and resolving common issues that affect BIG IP operation. It focuses on using logs, statistics, diagnostic tools, and basic troubleshooting methods to restore normal traffic flow and maintain stable application delivery.</li> </ul>

## 100% Pass 2026 F5 Valid Clear F5CAB1 Exam

However, it's not always the same. Cramming is not what shall stay in your mind forever. you can forget the lines anytime making you blank while you are trying to solve your F5CAB1 Exam Questions. So, don't cram even if it takes you a little more time to clear your doubts and get the concept clear. Cramming is not going to stay with you forever.

### F5 BIG-IP Administration Install, Initial Configuration, and Upgrade Sample Questions (Q57-Q62):

#### NEW QUESTION # 57

An administrator is in the process of reactivating the license using the interface displayed in the exhibit.

What is the address of the license server to which the BIG-IP device must be able to establish an outbound connection in order to use the Automatic Activation Method?

- A. license.f5.com
- B. ask.f5.com
- C. activate.f5.com
- D. callhome.f5.com

**Answer: C**

**Explanation:**

When you choose Automatic as the activation method in the License, Re-activate screen, the BIG-IP device itself contacts F5's license activation service over the Internet.

For successful automatic activation:

- \* The BIG-IP must have outbound network connectivity (typically via the management interface).
- \* DNS resolution and routing must allow it to reach the F5 license activation host (the one shown in option D).
- \* The device sends its dossier and registration key to that service and receives an updated license file in return, which is then installed

automatically.

The other hostnames in the options are not used by BIG-IP for license activation, so they cannot be correct in the context of Automatic Activation.

### NEW QUESTION # 58

The BIG-IP Administrator uses Secure Copy Protocol (SCP) to upload a TMOS image to the /shared/images/ directory in preparation for a TMOS upgrade.

After the upload is completed, what will the system do before the image is shown in the GUI under:

System > Software Management > Image List ?

- A. The system performs a reboot into a new partition
- B. The system copies the image to /var/local/images/
- C. The system verifies the internal checksum

**Answer: C**

Explanation:

When a TMOS image (.iso file) is uploaded into the /shared/images/ directory, the BIG-IP performs an internal validation step before the ISO appears in the GUI.

1. The system verifies the internal checksum

- \* BIG-IP automatically reads the embedded checksum inside the ISO file
- \* Verifies integrity of the uploaded image
- \* Confirms the file is not corrupted or incomplete
- \* Ensures the image is a valid F5 TMOS software image

Only after this checksum verification succeeds does the image appear under:

System # Software Management # Image List

Why the other options are incorrect:

- A). The system performs a reboot into a new partition
  - \* Uploading an ISO file never triggers a reboot.
- C). The system copies the image to /var/local/images/
  - \* All valid TMOS images remain in /shared/images/ .
  - \* No copying occurs.

### NEW QUESTION # 59

When logged into the bash shell of a BIG-IP system, which of the following commands will display the management-ip address? (Choose two.)

- A. list / sys management-ip
- B. tmsh list /sys management-ip
- C. ifconfig mgmt
- D. show mgmt ip

**Answer: B,C**

Explanation:

When logged into the bash shell of a BIG-IP system, there are two valid ways to view the management-ip address:

A). tmsh list /sys management-ip

\* Even from the bash shell, the administrator can enter a tmsh command by typing:

\* tmsh list /sys management-ip

\* This displays:

\* Management IP address

\* Netmask

\* Any configured management routes

\* This is the official tmsh method for viewing the management-ip configuration.

C). ifconfig mgmt

\* In the underlying Linux OS, the management interface maps to the mgmt interface.

\* Running:

\* ifconfig mgmt

displays:

- \* Assigned management IP
  - \* Netmask
  - \* Link-level status
  - \* This is a valid Linux-level method used frequently for troubleshooting
- Why the other options are incorrect:
- B). show mgmt ip
- \* Not a valid bash or tmsh command on BIG-IP.
- D). list / sys management-ip
- \* Missing the tmsh prefix.
  - \* In bash, this will generate a syntax error.
  - \* The correct form requires:
- ```
tmsh list /sys management-ip
```

### NEW QUESTION # 60

The BIG-IP Administrator wants to manage the newly built F5 system through an in-band Self-IP.

The administrator has configured a VLAN and Self-IP and can ping the IP from their workstation, but cannot access the system via SSH or HTTPS.

What port lockdown settings should the BIG-IP Administrator use to allow management access on the Self-IP?

(Choose two.)

- A. The Self-IP port lockdown behavior could be adjusted to Allow Default
- B. The Self-IP port lockdown behavior could be adjusted to Allow Mgmt
- C. The Self-IP port lockdown behavior could be adjusted to Allow Management
- D. The Self-IP port lockdown behavior could be adjusted to Allow All

**Answer: B,C**

Explanation:

Self-IPs include a security feature called Port Lockdown, which restricts which services respond on that Self-IP.

By default, Self-IPs block management access (SSH and HTTPS/TMUI), meaning an administrator cannot manage the device through in-band Self-IPs unless explicitly allowed.

Allow Mgmt / Allow Management

These settings enable only the management services required for administrative access, specifically:

- \* SSH (22)
- \* HTTPS/TMUI (443)

These options allow secure administration without opening unnecessary ports.

Why these are correct:

- \* They provide only the essential access for management.
- \* They follow F5 security best practices when using in-band admin access.
- \* They do not expose all services, reducing the attack surface.

Why the other options are incorrect:

A). Allow Default

- \* This allows only a minimal set of system-required ports (e.g., failover, config sync), not SSH or HTTPS.
- \* Administrator access would still fail.

B). Allow All

- \* Opens all ports on the Self-IP, which is not secure.
- \* Exposes services that should remain restricted.

Therefore, Allow Mgmt / Allow Management are the correct choices.

### NEW QUESTION # 61

An organization is planning to upgrade a BIG-IP system from 16.1.x to 17.1.x.

For a successful upgrade, the Service Check Date must be equal to or newer than the License Check Date required for 17.1.x.

Which command will show the Service Check Date on the BIG-IP system being upgraded?

- A. `grep "Service check date" /config/BigDB.dat`
- B. `grep "Service check date" /config/bigip.license`
- C. `grep "Service check date" /config/svc_chk_date.dat`
- D. `grep "Service check date" /config/bigip.conf`

**Answer: B**

**Explanation:**

BIG-IP licensing information, including the Service Check Date, is stored in the file:

/config/bigip.license

This file contains all license attributes downloaded from the F5 licensing server, including:

License key

Licensed modules

Useful life date

Service check date

The Service Check Date determines whether the system is eligible for upgrades to specific TMOS versions. When reviewing upgrade readiness, administrators extract this value directly from the license file with:

```
grep "Service check date" /config/bigip.license
```

Why the other options are incorrect:

/config/bigip.conf stores BIG-IP configuration objects, not license metadata.

/config/svc\_chk\_date.dat is not a valid file in the licensing system; it does not contain license parameters.

/config/BigDB.dat stores internal database values, not licensing attributes.

Thus, only the bigip.license file contains the correct licensing information required for verifying upgrade eligibility.

**NEW QUESTION # 62**

.....

DumpsActual is a globally famous IT exam provider, offering the valid and latest F5 F5CAB1 study material to all the candidates. Our mission is to provide quality F5CAB1 vce dumps which is easy to understand. There are F5CAB1 free demo for you to be downloaded. The purpose of the F5CAB1 demo is to show our F5CAB1 quality material to valuable customers. If you are satisfied with our F5CAB1 latest dumps, you can rest assured to buy it.
