

# DS0-001 Exam Braindumps: CompTIA DataSys+ Certification Exam & DS0-001 Certification Training

P.S. Free 2026 CompTIA DS0-001 dumps are available on Google Drive shared by CramPDF: [https://drive.google.com/open?id=1F-POQbl5CcS3jwzlsUh\\_1\\_MVFeMj0QYZ](https://drive.google.com/open?id=1F-POQbl5CcS3jwzlsUh_1_MVFeMj0QYZ)

CompTIA DS0-001 practice test software can be used on devices that range from mobile devices to desktop computers. We provide the CompTIA DS0-001 exam questions in a variety of formats, including a web-based practice test, desktop practice exam software, and downloadable PDF files. CramPDF provides proprietary preparation guides for the certification exam offered by the CompTIA DS0-001 Exam Dumps. In addition to containing numerous questions similar to the CompTIA DS0-001 exam, the CompTIA DS0-001 exam questions are a great way to prepare for the CompTIA DS0-001 exam dumps.

Our DS0-001 study guide provide you with three different versions including PC、App and PDF version. Each version has the same questions and answers, and you can choose one from them or three packaged downloads of DS0-001 training materials. In addition to a wide variety of versions, our learning materials can be downloaded and used immediately after payment. We believe you will understand the convenience and power of our DS0-001 Study Guide through the pre-purchase trial.

## CompTIA DS0-001 Test Engine | DS0-001 Pass Guide

We pay emphasis on variety of situations and adopt corresponding methods to deal with. More successful cases of passing the DS0-001 exam can be found and can prove our powerful strength. As a matter of fact, since the establishment, we have won wonderful feedback and ceaseless business, continuously working on developing our DS0-001 Test Prep. We have been specializing DS0-001 exam dumps many years and have a great deal of long-term old clients, and we would like to be a reliable cooperator on your learning path and in your further development.

## CompTIA DataSys+ Certification Exam Sample Questions (Q99-Q104):

### NEW QUESTION # 99

Which of the following is part of logical database infrastructure security?

- A. Biometric access
- B. Cooling system
- C. Surveillance
- D. Perimeter network

**Answer: D**

Explanation:

The option that is part of logical database infrastructure security is perimeter network. Perimeter network, also known as DMZ (Demilitarized Zone), is a network segment that lies between an internal network and an external network, such as the internet. Perimeter network provides an additional layer of security for the internal network by isolating and protecting the servers or services that are exposed to the external network, such as web servers, email servers, database servers, etc. Perimeter network also helps prevent unauthorized access or attacks from the external network to the internal network by using firewalls, routers, proxies, etc. The other options are either part of physical database infrastructure security or not related to database infrastructure security at all. For example, surveillance is a method of monitoring and recording physical activities or events in a location or resource; biometric access is a device that uses biological characteristics to control access to a physical location or resource; cooling system is a device or system that regulates the temperature and humidity of a location or resource. References: CompTIA DataSys+ Course Outline, Domain

4.0 Data and Database Security, Objective 4.1 Given a scenario, implement database infrastructure security.

**NEW QUESTION # 100**

Which of the following indexes stores records in a tabular format?

- A. Columnstore
- B. Secondary
- C. Unique
- D. Non-clustered

**Answer: A**

Explanation:

The index that stores records in a tabular format is columnstore. A columnstore index is a type of index that stores and compresses data by columns rather than by rows. A columnstore index can improve the performance and efficiency of queries that perform aggregations, calculations, or analysis on large amounts of data, such as data warehouse or business intelligence applications. A columnstore index can also reduce the storage space required for data by applying various compression techniques, such as dictionary encoding, run-length encoding, bit packing, etc. The other options are either different types of indexes or not related to indexes at all. For example, a non-clustered index is a type of index that stores the values of one or more columns in a sorted order along with pointers to the corresponding rows in the table; a unique index is a type of index that enforces uniqueness on one or more columns in a table; a secondary index is an alternative term for a non-clustered index. References: CompTIA DataSys+ Course Outline, Domain 3.0 Database Management and Maintenance, Objective 3.1 Given a scenario, perform common database maintenance tasks.

**NEW QUESTION # 101**

A database administrator would like for users to be able to access resources remotely from home. Which of the following best describes how the administrator can enable this access without compromising the security of the stored data?

- A. Implement a parameter network for internet-facing database applications.
- B. Implement a virtual private network.
- C. Implement strong passwords policies.
- D. Configure and deploy a firewall.

**Answer: B**

**NEW QUESTION # 102**

A database administrator wants to create a database that does not have a predefined schema.

Which of the following tools should the administrator use to create this type of database?

(Choose two.)

- A. PostgreSQL
- B. MongoDB
- C. MariaDB
- D. SQL Server
- E. Cosmos
- F. MySQL

**Answer: B,E**

#### **NEW QUESTION # 103**

Which of the following have data manipulation and procedural scripting power? (Choose two.)

- A. Advanced
- B. PQL
- C. PL/SQL
- D. T-SQL
- E. SQL
- F. SQL

**Answer: C,D**

Explanation:

The two options that have data manipulation and procedural scripting power are PL/SQL and T-SQL. PL /SQL, or Procedural Language/Structured Query Language, is an extension of SQL that adds procedural features to SQL for Oracle databases. PL/SQL allows users to create and execute stored procedures, functions, triggers, packages, etc., using variables, loops, conditions, exceptions, etc., in addition to SQL commands. PL

/SQL helps improve the performance, functionality, modularity, and security of SQL queries and applications.

T-SQL, or Transact-SQL, is an extension of SQL that adds procedural features to SQL for Microsoft SQL Server databases. T-SQL allows users to create and execute stored procedures, functions, triggers, etc., using variables, loops, conditions, exceptions, etc., in addition to SQL commands. T-SQL helps improve the performance, functionality, modularity, and security of SQL queries and applications. The other options are either not related or not having both data manipulation and procedural scripting power. For example, PQL, or Power Query Language, is a data analysis and transformation language for Microsoft Power BI and Excel; Advanced SQL is a term that refers to the advanced features or techniques of SQL, such as subqueries, joins, aggregations, etc.; SQL, or Structured Query Language, is a standard language for manipulating and querying data in relational databases, but it does not have procedural features. References: CompTIA DataSys+ Course Outline, Domain 1.0 Database Fundamentals, Objective 1.2 Given a scenario, execute database tasks using scripting and programming languages.
