Free PDF Quiz 2026 C_SAC_2501: High Pass-Rate Pdf SAP Certified Associate - Data Analyst - SAP Analytics Cloud Version

Due to professional acumen of expert's, our C_SAC_2501 guide quiz has achieved the highest level in proficiency's perspective. For your particular inclination, we have various versions of our C_SAC_2501 exam braindumps for you to choose:the PDF, the Software version and the APP online. Now take a look of their features and you can get realized of our C_SAC_2501 Training Materials better. And as long as you purchase our C_SAC_2501 study engine, you can enjoy free updates for one year long.

SAP Certified Associate - Data Analyst - SAP Analytics Cloud Sample Questions (Q50-Q55):

NEW QUESTION # 50

To which story elements can you apply conditional formatting? Note: There are 2 correct answers to this question.

- A. Composite
- B. Table
- C. Lane
- D. Chart

Answer: B,D

Explanation:

In SAP Analytics Cloud stories, conditional formatting can be applied to Table and Chart elements. This feature allows users to visually highlight data points based on specific conditions, such as thresholds, ranges, or comparisons, making it easier to identify trends, outliers, or areas of interest within the data presented in tables and charts.

NEW QUESTION # 51

You need to delete characters from a column in a dataset. What can you use? Note: There are 2 correct answers to this question.

- A. Calculation editor
- B. Formula bar
- C. Transform bar
- D. Custom expression editor

Answer: C,D

NEW QUESTION # 52

In which types of data source can you concatenate data? Note: There are 3 correct answers to this question.

- A. Imported data model
- B. Standalone dataset
- C. Embedded data set
- D. Live data model
- E. Data analyzer insight

Answer: A,B,C

Explanation:

In SAP Analytics Cloud, data concatenation can be performed on Embedded datasets, Standalone datasets, and Imported data models. This process involves combining data from multiple sources or tables into a single dataset or model, providing a unified view of the data. This is particularly useful for analyses that require a comprehensive dataset compiled from various data sources.

NEW QUESTION # 53

You have a dimension with members for product groups and products. Each product group has associated products. You want to plan by product group without disaggregating into the products. How can you do this?

- A. Use two properties
- B. Dis-able allocations
- C. Use two hierarchies
- D. Dis-able distribution

Answer: C

Explanation:

When you have a dimension with members for product groups and associated products and want to plan by product group without disaggregating into the individual products, using two hierarchies is the best approach. One hierarchy can represent the product groups at a higher level, allowing for planning and analysis at the group level. The second hierarchy can include both the product groups and their associated individual products for more detailed analysis when needed. This approach provides flexibility in planning and analyzing data at different levels of detail without the necessity of disaggregating data at the product group level.

NEW QUESTION # 54

How can you limit the refresh time of a story?

- A. Use canvas pages
- B. Implement a value driver tree
- C. Collapse the hierarchy
- D. Create calculated measures

Answer: C

Explanation:

Collapsing the hierarchy in a story can help limit the refresh time, as it reduces the amount of data that needs to be processed and displayed at any given time. By presenting data at a higher aggregation level initially, you can improve performance and allow users to expand specific sections of the hierarchy as needed for more detailed analysis.
