

Security, Specialist (JNCIS-SEC) exam training dumps & JN0-336 valid test questions & Security, Specialist (JNCIS-SEC) test vce torrent

P.S. Free & New JN0-336 dumps are available on Google Drive shared by TopExamCollection: <https://drive.google.com/open?id=1uHhQO5sQxO364rOOApa9OYyui5TkBjFg>

In order to survive better in society, we must understand the requirements of society for us. In addition to theoretical knowledge, we need more practical skills. After we use the JN0-336 practice guide, we can get the certification faster, which will greatly improve our competitiveness. And as long as you have more competitiveness than the others, then you will stand out to get higher salary and better positions. Our JN0-336 Exam Questions not only can help you more capable on your job, but also help you get certification. Just rush to buy our JN0-336 learning guide!

You can take the Juniper JN0-336 desktop practice exam on Windows computers. TopExamCollection has come up with this new style format in which you can easily track the records of your previous progress. So, you will understand how much you have improved or how much you need improvement for passing exam. The Security, Specialist (JNCIS-SEC) (JN0-336) practice exam will also boost your time management skills.

JN0-336 Vce Format | JN0-336 New Braindumps Pdf

Juniper JN0-336 training materials have won great success in the market. Tens of thousands of the candidates are learning on our JN0-336 practice engine. First of all, our Juniper JN0-336 study dumps cover all related tests about computers. It will be easy for you to find your prepared learning material. If you are suspicious of our JN0-336 Exam Questions, you can download the free demo from our official websites.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q61-Q66):

NEW QUESTION # 61

You are asked to ensure that if the session table on your SRX Series device gets close to exhausting its resources, that you enforce a more aggressive age-out of existing flows.

In this scenario, which two statements are correct? (Choose two.)

- A. The high-watermark configuration specifies the percentage of how much of the session table is left before disabling a more aggressive age-out timer.
- B. The early-ageout configuration specifies the timeout value, in seconds, that will be applied once the low-watermark value is met.
- C. The high-watermark configuration specifies the percentage of how much of the session table can be allocated before applying a more aggressive age-out timer
- D. The early-ageout configuration specifies the timeout value, in seconds, that will be applied once the high-watermark value

is met.

Answer: C,D

Explanation:

The early-ageout configuration specifies the timeout value, in seconds, that will be applied once the high- watermark value is met. The high- watermark configuration specifies the percentage of how much of the session table can be allocated before applying a more aggressive age-out timer. This ensures that the session table does not become full and cause traffic issues, and also ensures that existing flows are aged out quickly when the table begins to get close to being full.

NEW QUESTION # 62

Click the Exhibit button.

Which two statements describe the output shown in the exhibit? (Choose two.)

- A. Node 0 is controlling traffic for redundancy group 1.
- B. Node 1 is controlling traffic for redundancy group 1.
- C. Redundancy group 1 was administratively failed over.
- D. Redundancy group 1 experienced an operational failure.

Answer: A,B

Explanation:

The output indicates that node1 has a priority of 200 and is marked as "Primary," which means it is currently the active node controlling traffic for redundancy group 1. The "Primary" status designates that this node is handling the traffic for the specified redundancy group.

According to the exhibit, node0 is listed with a priority of 0 and is marked as "Secondary." This status indicates that node0 is currently not controlling traffic for redundancy group 1, serving instead in a standby role ready to take over should node1 fail or become unavailable.

NEW QUESTION # 63

Your company is using the Juniper ATP Cloud free model. The current inspection profile is set at 10 MB. You are asked to configure ATP Cloud so that executable files up to 30 MB can be scanned while at the same time minimizing the change in scan time for other file types.

Which configuration should you use in this scenario?

- A. Use the ATP Cloud UI to change the default profile to increase the scan limit for all files to 30 MB.
- B. Use the CLI to create a custom profile and increase the scan limit.
- C. Use the ATP Cloud UI to update a custom profile and increase the scan limit for executable files to 30 MB.
- D. Use the CLI to change the default profile to increase the scan limit for all files to 30 MB.

Answer: C

Explanation:

In this scenario, you should use the ATP Cloud UI to create a custom profile and update the scan limit for executable files to 30 MB. This will ensure that executable files up to 30 MB can be scanned, while at the same time minimizing the change in scan time for other file types. To do this, log in to the ATP Cloud UI and go to the Profiles tab. Click the Create button to create a new profile, and then adjust the scan limits for executable files to 30 MB. Once you have saved the custom profile, you can apply it to the desired systems and the new scan limit will be in effect.

NEW QUESTION # 64

Which statement regarding Juniper Identity Management Service (JIMS) domain PC probes is true?

- A. JIMS domain PC probes are triggered to map usernames to group membership information.
- B. JIMS domain PC probes are initiated by an SRX Series device to verify authentication table information.
- C. JIMS domain PC probes analyze domain controller security event logs at 60-minute intervals by default.
- D. JIMS domain PC probes are triggered if no username to IP address mapping is found in the domain security event log.

Answer: D

Explanation:

Juniper Identity Management Service (JIMS) domain PC probes are used to map usernames to IP addresses in the domain security event log. This allows for the SRX Series device to verify authentication table information, such as group membership. The probes are triggered whenever a username to IP address mapping is not found in the domain security event log. By default, the probes are executed at 60-minute intervals.

NEW QUESTION # 65

You want to deploy a virtualized SRX in your environment.

In this scenario, why would you use a vSRX instead of a cSRX? (Choose two.)

- A. The vSRX has faster boot times.
- B. Only the vSRX provides NAT, IPS, and UTM services
- C. Only the vSRX provides clustering.
- D. The vSRX supports Layer 2 and Layer 3 configurations.

Answer: C,D

Explanation:

vSRX provides flexible networking capabilities which include support for both Layer 2 (data link) and Layer 3 (network) configurations. This allows it to handle a variety of routing and switching tasks within virtual environments.

Clustering capability, which involves grouping multiple vSRX instances to operate as a single entity for redundancy and high availability, is a feature specific to vSRX. This is critical in environments where continuous uptime and resilience are required.

NEW QUESTION # 66

.....

The latest technologies have been applied to our JN0-336 actual exam as well since we are at the most leading position in this field. You can get a complete new and pleasant study experience with our JN0-336 study materials. Besides, you have varied choices for there are three versions of our JN0-336 practice materials. At the same time, you are bound to pass the exam and get your desired certification for the validity and accuracy of our JN0-336 training guide.
