Salesforce Certified Tableau Data Analyst Sample Questions (Q137-Q142):

NEW QUESTION # 137

You have the following visualization.

You want the count of Returns displayed only for the first year in the table.

How should you complete the formula in the calculated field? (Use the dropdowns in the Answer Area to select the correct options to complete the formula.)

Answer Area

IF FIRST()
INDEX()
[Ship Date]
LAST()
RANK() THEN COUNT([Returns]) END

Answer:

Explanation:

Answer Area

IF FIRST()
INDEX()
[Ship Date]
LAST()
RANK() THEN COUNT([Returns]) END

Explanation:

we need to create a calculated field that displays the count of returns only for the first year in the table. To do this, we can use the following formula:

IF FIRST() = 0 THEN COUNT (Returns) END

This formula uses the FIRST() function, which returns the number of rows from the current row to the first row in the partition. If the current row is the first row, then FIRST() returns 0. The IF statement checks if this condition is true, and if so, it returns the count of returns for that row. Otherwise, it returns NULL.

To complete the formula in the calculated field, you should select the following options from the drop-down menus:

* FIRST()

* 0

* COUNT (Returns)

NEW QUESTION # 138

You want to ensure that when you click a bar on a dashboard, a tooltip appears that contains a link named "Click here to know more!" as shown in the following exhibit.

The screenshot shows a Salesforce dashboard titled "Sales by Sub-Category". A bar chart displays sales data for various sub-categories. A tooltip is shown for the "Phones" bar, containing the text "Sub-Category: Phones" and "Sales: 330,000". Below the sales amount is a link labeled "Click here to know more!". The "Answer Area" below the dashboard contains configuration for a bar chart action. The "Action type" dropdown is set to "Filter", and the "Run action on" dropdown is set to "Hover".

Answer:

Explanation:

The screenshot shows a Salesforce dashboard titled "Sales by Sub-Category". A bar chart displays sales data for various sub-categories. A tooltip is shown for the "Phones" bar, containing the text "Sub-Category: Phones" and "Sales: 330,000". Below the sales amount is a link labeled "Click here to know more!". The "Answer Area" below the dashboard contains configuration for a bar chart action. The "Action type" dropdown is set to "Go to URL", and the "Run action on" dropdown is set to "Menu".

Explanation:

A tooltip is shown for the "Phones" bar, containing the text "Sub-Category: Phones" and "Sales: 330,000". Below the sales amount is a link labeled "Click here to know more!". The "Answer Area" below the dashboard contains configuration for a bar chart action. The "Action type" dropdown is set to "Go to URL", and the "Run action on" dropdown is set to "Menu".

NEW QUESTION # 139

A Data Analyst has the following chart that shows the cumulative volume of sales from various dates.

The analyst wants the months to appear as shown in the following chart.

What should the analyst do?

- A. Convert the date to Attribute
- B. Change the Sort Order
- C. Convert the date to Continuous**
- D. Convert the date to Exact Date

Answer: C

NEW QUESTION # 140

You want to create the following table in a view.

Segment	Position	Sales
Corporate	0	706,146
Home Office	1	429,653
Consumer	-2	1,161,401

Which function should you use to create the Position column?

- A. RANK
- B. INDKX
- C. LAST
- D. FIRST**

Answer: D

Explanation:

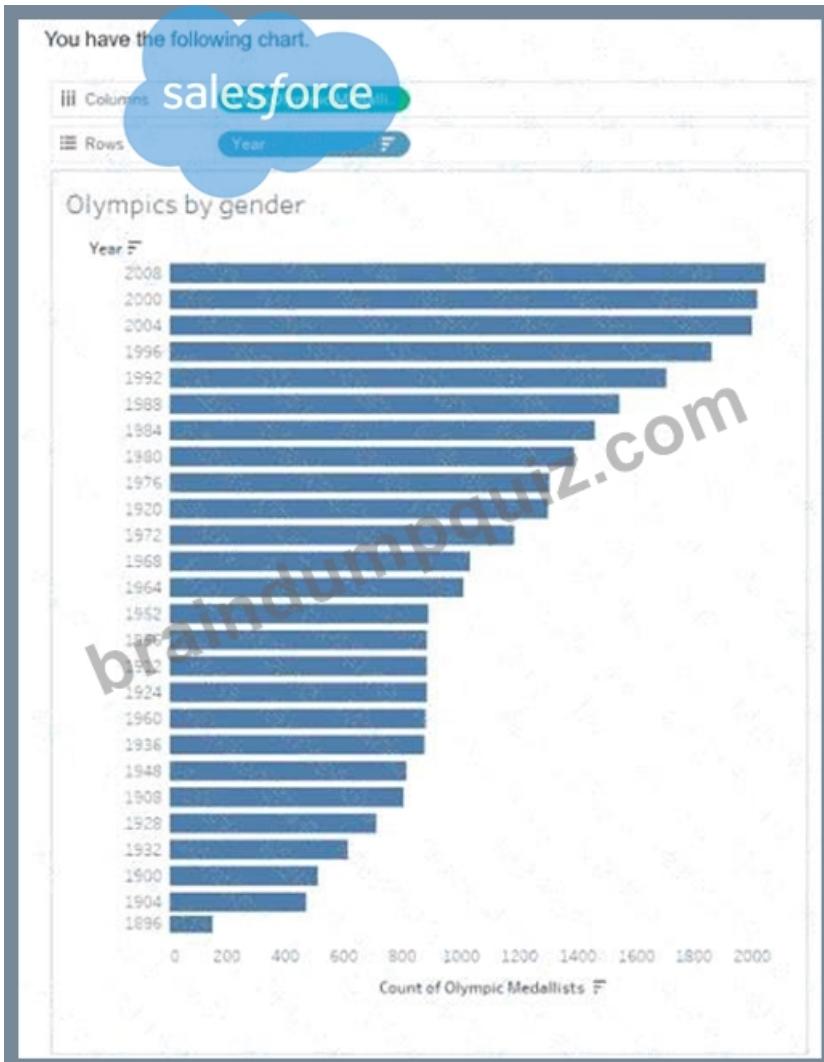

To create the Position column, you should use the FIRST() function. The FIRST() function returns the number of rows from the current row to the first row in the partition. For example, the first row in a partition will return 0, the second row will return -1, and so on. In this question, the partition is defined by the Segment field, and the table is sorted by the Sales field in descending order. Therefore, the Position column shows the offset of each row from the first row in each segment, based on the sales ranking.
