The Technological environment is changing rapidly because of new technological advancements and innovations. It's become mandatory to study and apply new techniques. EMC D-ISM-FN-01 dumps certification will help you to adapt to the demands of the current world. D-ISM-FN-01 Exam Dumps will assist you in obtaining better employment opportunities compared to your competitors. A Prep4sureGuide will not only increase your knowledge but it will polish your skills as well to proceed successfully in the world of EMC.

Authorized test Dell Information Storage and Management Foundations v2 Exam dumps Premium Files Test Engine pdf. Updated D-ISM-FN-01 training topics with question explanations. Free practice EMC study demo with reasonable exam price. Guaranteed D-ISM-FN-01 Questions Answers 365 days free updates, pass D-ISM-FN-01 exam with excellent pass rate. Positive feedback from Prep4sureGuide's customers. D-ISM-FN-01 sample questions answers has regular updates.

## **EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q40-Q45):**

**NEW QUESTION # 40**

Question:

A storage system uses SSDs as a secondary cache tier in front of traditional hard drives. What is the primary goal of this configuration?

- A. To simplify data backup
- B. To increase storage capacity
- C. To improve read performance
- D. To reduce power consumption

**Answer: C**

Explanation:

Using SSDs as a secondary cache (sometimes called a "flash cache") helps:

Improve read performance by storing frequently accessed data in the faster SSDs.

Reduce latency for read requests because SSDs are much faster than traditional spinning hard drives (HDDs).

\* Power consumption (A): SSDs do use less power, but the primary goal here is performance.

\* Data backup (C): SSD cache doesn't impact backup operations.

\* Storage capacity (D): This is not the main focus; the SSDs act as a cache layer only.

## NEW QUESTION # 41

Question:

A company is looking for a continuous data protection solution that can provide any point-in-time recovery.

Which Dell solution is most suitable for this requirement?

- A. Dell Cloud Tier
- B. Dell SRDF
- C. Dell RecoverPoint
- D. Dell TimeFinder SnapVX

**Answer: C**

Explanation:

Dell RecoverPoint is a continuous data protection (CDP) solution that uses journaling to provide any point-in-time recovery of data. It continuously captures and replicates data changes, storing them in a journal to enable precise recovery to any required point in the past.

\* Dell SRDF (Symmetrix Remote Data Facility): Provides synchronous/asynchronous replication, not CDP.

\* Dell TimeFinder SnapVX: Creates point-in-time snapshots but doesn't offer continuous journaling.

\* Dell Cloud Tier: Used for archiving older data to the cloud.

## NEW QUESTION # 42

Question:

What type of disk devices are the highest performing and most expensive of all disk devices?

- A. FC
- B. SSD
- C. SATA
- D. SAS
- E. SCM

**Answer: E**

Explanation:

Storage Class Memory (SCM) represents a new class of storage technology that bridges the gap between traditional DRAM and NAND flash memory. SCM offers significantly lower latency and higher endurance compared to NAND flash, making it the highest-performing storage medium currently available. Due to its advanced technology and performance characteristics, SCM is also the most expensive among the listed options.

- \* FC (Fibre Channel):A network protocol used for high-speed data transfer, not a type of disk device.
- \* SATA (Serial ATA):Commonly used in consumer-grade storage; offers lower performance and cost.
- \* SAS (Serial Attached SCSI):Offers better performance than SATA but still lags behind SSDs and SCM.
- \* SSD (Solid State Drive):Provides faster data access than HDDs but is outperformed by SCM.
- \* SCM (Storage Class Memory):Combines the speed of DRAM with the persistence of NAND, offering unparalleled performance.

#### NEW QUESTION # 43

Question:

What is the first step in the machine learning process?

- A. Selecting the type of learning
- B. **Collecting the datasets**
- C. Training the model
- D. Analyzing the data

**Answer: B**

Explanation:

The first step in any ML project is to collect the datasets that will be used to train and validate the model.

This data collection step ensures you have enough representative examples.

After this, data is analyzed, learning type is chosen, and the model is trained.

#### NEW QUESTION # 44

Question:

Which information is contained in a stub file?

- A. Address of the source file
- B. Hard drive address storing the archived file
- C. **Address of the archived file**
- D. Name and size of the archived file

**Answer: C**

Explanation:

A stub file is a small placeholder file that remains on primary storage after data has been archived or moved to secondary storage. It contains a pointer or address of the archived data's location.

When accessed, the data is transparently retrieved from the archive.

\* Address of the source file and other options do not accurately describe a stub file's purpose.
