Using our reliable exam product can prove a helping hand for you to become Nokia 4A0-D01 certified. Do not waste any more time because this 4A0-D01 exam dumps can be a turning point in your exam preparation journey. Remember that you cannot afford to suffer from 4A0-D01 Exam failure because the registration fee of the test is high and you will not want to spend this massive amount for the second attempt.

4A0-D01 practice test can be your optimum selection and useful tool to deal with the urgent challenge. With over a decade's striving, our 4A0-D01 training materials have become the most widely-lauded and much-anticipated products in industry. We have three versions of 4A0-D01 Exam Questions by modernizing innovation mechanisms and fostering a strong pool of professionals. Therefore, rest assured of full technical support from our professional elites in planning and designing 4A0-D01 practice test.

New 4A0-D01 Exam Name, 4A0-D01 Reliable Test Question

We cannot predicate the future but we can live in the moment. There are many meaningful things waiting for us to do. Try to immerse yourself in new experience. Once you get the Nokia 4A0-D01 certificate, your life will change greatly. First of all, you will grow into a comprehensive talent under the guidance of our Nokia Data Center Fabric Fundamentals Exam 4A0-D01 Exam Materials, which is very popular in the job market.

Nokia 4A0-D01 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> SR Linux Logging, Monitoring, and Filtering: This section of the exam measures skills of a Data Center Network Engineer and addresses how to implement logging, monitoring, and traffic filtering in SR Linux. It explains log file usage, ACL types, CPM filtering, and packet capture filters. Configuration tasks involve applying ACLs and monitoring network activity using capture tools.
Topic 2	<ul style="list-style-type: none"> SR Linux User and System Management: This section of the exam measures skills of a Network Automation Specialist and includes managing user roles, TLS configurations for secure communication, and automation features like Zero-Touch Provisioning (ZTP). It covers ZTP setup, configuration processes, and common issues that may arise during deployment.
Topic 3	<ul style="list-style-type: none"> This section of the exam measures skills of a Network Automation Specialist and introduces the principles of Event Driven Automation in SR Linux environments. It covers integration with Kubernetes and explores core use cases such as intent-based automation for fabrics and services, as well as enhanced network observability.
Topic 4	<ul style="list-style-type: none"> Module 5 – EDA (Event Driven Automation) Introduction

Nokia Data Center Fabric Fundamentals Exam Sample Questions (Q33-Q38):

NEW QUESTION # 33

Which of the following is NOT part of Day 2+ operations with Nokia's Fabric Services System?

- A. Use a fabric intent to build and validate design templates.
- B. Monitor the data center fabric using model-driven telemetry.
- C. Analyze the overall health of the data center fabric for proactive operations.
- D. Use the digital sandbox to test and validate configuration changes and upgrades.

Answer: A

Explanation:

Using a fabric intent to build and validate design templates is primarily a Day 0 or Day 1 activity focused on initial fabric deployment and design, not part of Day 2+ operational tasks like monitoring, health analysis, or change validation.

NEW QUESTION # 34

Which of the following statements about the data center's leaf-spine topology (clos network) is FALSE?

- A. It uses ECMP to distribute traffic across duplicate links.
- B. It provides a consistent path for east-west traffic.
- C. It uses the spanning tree protocol to avoid forwarding loops.
- D. Each leaf router is connected to all the spine routers in the cluster.

Answer: C

Explanation:

The leaf-spine (Clos) topology does not use the spanning tree protocol because it relies on equal-cost multipath (ECMP) routing to prevent loops and efficiently utilize all available paths. Spanning tree is typically avoided in modern data center fabrics to enable full bandwidth utilization.

NEW QUESTION # 35

Which of the following statements about the YANG model used in Nokia's SR Linux is FALSE?

- A. All configuration and state information is defined as a YANG model.
- B. The YANG model uses a tree structure with "leafs" as the branches and "containers" as the data components.

- C. The YANG model provides a standardized way for applications to retrieve SR Linux configuration and state information.
- D. The YANG model can be converted into other formats such as JSON or XML.

Answer: B

Explanation:

In YANG models, "leafs" are the data nodes (not branches), and "containers" group related data nodes. The statement incorrectly reverses their roles by calling leafs branches and containers data components.

NEW QUESTION # 36

Which of the following is NOT how prefixes are typically learned and advertised in a leaf and spine data center?

- A. Each leaf router advertises the prefixes of its own locally connected servers.
- B. Spine routers learn prefixes from leaf routers directly using eBGP.
- C. Spine routers advertise learned prefixes to leaf routers directly using eBGP.
- D. Each leaf router learns the prefixes of remote servers from other leaf routers directly using eBGP.

Answer: D

Explanation:

Leaf routers do not learn prefixes from other leaf routers directly using eBGP; instead, leaf routers learn remote prefixes via spine routers. The spine acts as the route reflector or intermediary between leaf routers.

NEW QUESTION # 37

Which of the following statements about the IRB subinterface configuration in Nokia SR Linux is FALSE?

- A. One IRB subinterface is configured in a MAC-VRF network instance.
- B. An IP address is configured under the IRB's subinterface.
- C. One IRB subinterface is configured for each interface within a MAC-VRF network instance.
- D. An IRB subinterface is configured in an IP-VRF network instance.

Answer: C

Explanation:

In Nokia SR Linux, IRB subinterfaces are configured one per MAC-VRF network instance, not one for each interface within that instance. Multiple IRB subinterfaces per interface are not typical.

NEW QUESTION # 38

.....

It is certain that the pass rate of our 4A0-D01 study guide among our customers is the most essential criteria to check out whether our 4A0-D01 training materials are effective or not. The good news is that according to statistics, under the help of our 4A0-D01 learning dumps, the pass rate among our customers has reached as high as 98% to 100%. It is strongly proved that we are professional in this career and our 4A0-D01 exam braindumps are very popular.
