DASCA Senior Data Scientist Sample Questions (Q80-Q85):

NEW QUESTION # 80

Spark programs can be written in:

- A. None of the above
- **B. All of the above**
- C. Scala
- D. Java
- E. Python

Answer: B

Explanation:

Apache Spark supports multiple programming languages for developing distributed applications:

Java (Option A): Supported through Spark's JVM-based APIs.

Scala (Option B): Spark is natively written in Scala, and Scala APIs provide full functionality.

Python (Option C): Supported via PySpark, enabling Python developers to leverage Spark.

Additionally, Spark also supports R and SQL-like queries, making it versatile for data scientists and engineers.

Thus, the correct answer is Option D (All of the above).

NEW QUESTION # 81

The aim of developing Scribe was to offer reliability with using:

- A. Extensive protocols
- B. High disk space usage
- **C. None of the above**
- D. Complex protocols

Answer: C

Explanation:

Scribe is a server developed by Facebook for aggregating log data streamed in real time from many servers.

Its primary aim was reliability and simplicity in collecting logs at scale.

Unlike other systems, Scribe was designed to avoid complex or extensive protocols and to ensure lightweight log transfer.

It also avoids unnecessary high disk usage, relying instead on efficient pipelines.

Thus, the correct answer is Option D (None of the above).

NEW QUESTION # 82

Bernoulli random variable is a type of:

- A. Sometimes Discrete or sometimes Continuous random variable
- B. Continuous random variable
- **C. Discrete random variable**
- D. Both A and B

Answer: C

Explanation:

A Bernoulli random variable is the simplest form of discrete random variable.

It can take only two values:

1 with probability p (success).

0 with probability $(1 - p)$ (failure).

Since the outcomes are finite (binary), it is a discrete random variable.

Option B (Continuous): Incorrect, as continuous variables take values from an interval (e.g., real numbers).

Option C and D: Incorrect, as Bernoulli is always discrete, never continuous.

Thus, the correct answer is Option A (Discrete random variable).

NEW QUESTION # 83

Which of the following standardizes scores similar to a percentile rank but preserves equal interval properties of a Z-score?

- A. High Curve Equivalent (HCE)
- B. None of the above
- **C. Normal Curve Equivalent (NCE)**
- D. Trend analysis
- E. Medium Curve Equivalent (MCE)

Answer: C

Explanation:

Normal Curve Equivalent (NCE) scores are standardized scores designed to:

Range between 1 and 99.

Be comparable to percentile ranks but with the advantage of equal-interval properties like Z-scores.

This makes NCE scores useful in educational assessments, survey analysis, and statistical modeling.

Option A (Trend analysis): Incorrect. Not related to score standardization.

Option B (Correct): NCE fits the definition perfectly.

Option C (HCE) & D (MCE): Not recognized standard measures in statistics.

Option E: Incorrect, since Option B is valid.

Thus, the correct answer is Option B: Normal Curve Equivalent (NCE).

NEW QUESTION # 84

Which of the following errors refers to the wrong negation of a true null hypothesis?

- A. None of the above
- B. Hypothesis Error
- C. Logical Error
- D. Type II Error
- **E. Type I Error**

Answer: E

Explanation:

In hypothesis testing, two main types of errors are defined:

Type I Error (Option A): Occurs when the null hypothesis (H_0) is true, but we incorrectly reject it. This is known as a false positive.

Example: Concluding a drug is effective when it is not.

Type II Error (Option B): Occurs when the null hypothesis (H_0) is false, but we fail to reject it. This is a false negative. Example:

Concluding a drug has no effect when it actually does.

Logical Error / Hypothesis Error (Options C and D): Not standard terms in statistical hypothesis testing.

Thus, the "wrong negation of a true null hypothesis" refers to a Type I Error (false positive).
