The SAP C\_S4EWM\_2023 demo version is provided for customer satisfaction.

### SAP C\_S4EWM\_2023 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Warehouse Processing, Warehouse Task and Order Creation, Strategies: This topic includes defining warehouse process types and setting up determination, as well as defining putaway and picking strategies.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Outbound Processes (Wave Management, Cross-docking, Production Integration): This topic covers combining outbound deliveries using wave management, packing and kitting in outbound processes, and staging products for production.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Warehouse Management (Monitor - Cockpit): This topic involves monitoring warehouse activities using the Warehouse Management Monitor, Warehouse Cockpit, and analytical apps.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>System Integration, Master Data and Delivery Document Customizing: This focuses on setting up system integration, distributing master data, and customizing delivery documents.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>Process and Layout Oriented Storage Control: It covers creating customizing settings and using Process and Layout-Oriented Storage Control.</li></ul>
Topic 6	<ul style="list-style-type: none"><li>Managing Clean Core: It covers evaluating and applying clean core principles to ERP to maximize business process agility, reduce adaptation efforts, and accelerate innovation.</li></ul>
Topic 7	<ul style="list-style-type: none"><li>Warehouse Structure, Resource Management and SAP EWM Master Data: This topic encompasses defining the warehouse structure and setting up resource management, along with creating SAP EWM master data like storage bins and products, packaging specifications, supply chain units, and business partners.</li></ul>
Topic 8	<ul style="list-style-type: none"><li>Shipping and Receiving: It focuses on configuring Yard Management, SAP Dock Appointment Scheduling, and using the Shipping Cockpit.</li></ul>

### SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Extended Warehouse Management Sample Questions (Q70-Q75):

#### NEW QUESTION # 70

Which of the following actions are possible based on a value-added service (VAS) order? Note: There are 3 correct answers to this question.

- A. Perform quality inspection
- B. Capture time required
- C. Assemble a kit
- D. Consume auxiliary products
- E. Capture costs

**Answer: B,C,D**

Explanation:

Comprehensive and Detailed In-Depth Explanation:

A VAS order in SAP EWM supports additional services during processing. Option A ("Assemble a kit") is correct as kitting is a common VAS activity. Option B ("Consume auxiliary products") is correct because VAS often uses materials like packaging, and option D ("Capture time required") is correct as Labor Management tracks VAS execution time, all configured in SPRO: SCM Extended Warehouse Management > Value-Added Services. Option C (quality inspection) is a separate QM process, and option E (costs) is tracked indirectly, not directly via VAS orders.

#### NEW QUESTION # 71

You need to create warehouse tasks for putaway. Which SAP Extended Warehouse Management document do you use as your reference document?

- **A. Inbound delivery**
- B. Posting change request
- C. Inbound delivery notification
- D. Expected goods receipt

**Answer: A**

Explanation:

To create warehouse tasks for putaway in SAP EWM, the reference document is:

- \* A. Inbound Delivery:
- \* The inbound delivery is used to initiate putaway processes and serves as the basis for creating warehouse tasks.
- \* It contains all necessary details, such as product, quantity, and source location.

Incorrect Options:

- \* B: The inbound delivery notification is a precursor to the inbound delivery.
- \* C: Posting change requests are used for inventory updates, not putaway.
- \* D: Expected goods receipt provides preliminary information but is not used directly for task creation.

References:

- \* SAP Help Portal: Inbound Delivery Processing
- \* SAP EWM Documentation: Warehouse Task Creation

#### NEW QUESTION # 72

Which of the following is a prerequisite for assigning a warehouse order to a resource automatically?

- **A. The warehouse order must be picked from the same activity area that is assigned to the resource.**
- B. The resource group of the resource must be assigned to the warehouse order creation rule.
- C. The creation of a pick-handling unit must be done automatically with a packaging specification.
- D. The warehouse order must be in a queue that is assigned to the resource either directly or through a resource group.

**Answer: A**

Explanation:

Automatic Assignment of Warehouse Orders to Resources

\* A warehouse order can be automatically assigned to a resource if it is closely tied to specific operational areas, such as activity areas.

\* Activity Areas (B): These represent logical divisions in the warehouse where resources perform tasks such as picking. The resource must be assigned to the same activity area to enable automatic assignment.

Excluded Options

- \* Option A: Although queues may influence assignment, they are not the sole determining factor for automatic assignment.
- \* Option C: Resource group assignment to warehouse order creation rules is unrelated to automatic order assignment.
- \* Option D: Automatic creation of pick-handling units is a packaging specification requirement, not directly related to resource assignment.

SAP S/4HANA Cloud Private Edition Reference

\* Refer to Activity Areas in Resource Management in SAP EWM documentation for detailed configuration.

#### NEW QUESTION # 73

What do you need to configure before you can create warehouse tasks for an outbound delivery order or an inbound delivery?

Note: There are 2 correct answers to this question.

- A. Putaway control indicator or stock removal control indicator
- B. Warehouse order creation rules
- C. Warehouse process types
- D. Warehouse process type determination

**Answer: C,D**

Explanation:

Comprehensive and Detailed In-Depth Explanation:

Creating warehouse tasks in SAP EWM requires foundational configuration. Option B ("Warehouse process type determination") is correct because it defines how the system assigns a process type (e.g., putaway, picking) to a delivery item, configured in SPRO: SCM Extended Warehouse Management > Cross-Process Settings > Warehouse Task > Define Warehouse Process Type Determination. Option D ("Warehouse process types") is correct as it specifies the process flow (e.g., "PICK" for picking), set up in SPRO: SCM Extended Warehouse Management > Cross-Process Settings > Warehouse Task > Define Warehouse Process Type. Option A (indicators) influences task execution but isn't a prerequisite for creation, and option C (order creation rules) applies to warehouse orders, not tasks directly.

#### NEW QUESTION # 74

In process-oriented storage control, what can you use rule-based determination for?

- A. To determine the warehouse process type
- B. To determine the destination storage bin
- C. To determine the warehouse order creation rule
- D. To determine the source storage bin

**Answer: B**

Explanation:

Comprehensive and Detailed In-Depth Explanation:

Process-oriented storage control (POSC) in SAP EWM manages complex warehouse processes with rule-based determination. Option B ("To determine the destination storage bin") is correct because POSC uses rules to dynamically assign bins for steps like putaway, configured in SPRO: SCM Extended Warehouse Management > Cross-Process Settings > Process-Oriented Storage Control > Define Storage Process. Options A, C, and D (WOGR, source bin, process type) are determined by other mechanisms like warehouse process types or stock removal strategies, not POSC rule-based logic.

#### NEW QUESTION # 75

.....

Actual SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Extended Warehouse Management (C\_S4EWM\_2023) dumps are designed to help applicants crack the Central Finance in C\_S4EWM\_2023 test in a short time.
