Pass Guaranteed 2026 - C-ACDET-2506 - Vce SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Files

As we all know, C-ACDET-2506 certification is of great significance to highlight your resume, thus helping you achieve success in your workplace. So with our C-ACDET-2506 preparation materials, you are able to pass the exam more easily in the most efficient and productive way and learn how to study with dedication and enthusiasm, which can be a valuable asset in your whole life. There are so many advantages of our C-ACDET-2506 Guide dumps which will let you interested and satisfied.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q10-Q15):

NEW QUESTION # 10

What are the key characteristics of a Bluefield deployment scenario? (Select 2 correct answers)

- **A. The Production site may have live transactions**
- B. Many team members have a naive perception of deploying software solutions
- C. The Test site has been configured using the SAP Bluefield template
- **D. The customer already has an SAP Ariba Strategic Sourcing suite solution deployed**

Answer: A,D

Explanation:

A Bluefield deployment means the customer already has an SAP Ariba solution deployed (B), and the production system may be live with ongoing transactions (C). This requires careful, incremental migration to avoid disruption. There is no specific "Bluefield template" for test sites (D), and team perceptions (A) are irrelevant.

NEW QUESTION # 11

Which read-only files show the key and English translations for custom field labels and helptips?

- A. The JSON files that can be exported through ICM
- **B. The JSON files that can be exported through AML & Translations Upload**
- C. The customerResource files that can be exported through ICM
- D. The customerResource files that can be exported through AML & Translations Upload

Answer: B

Explanation:

SAP Ariba stores translations for custom field labels and help tips in JSON files exported and imported via AML (Advanced Metadata List) & Translations Upload. These JSON files contain key-value pairs representing the translation keys and their English or localized strings. This mechanism supports language management and bulk updates of translated content.

ICM exports configuration bundles but does not handle translation files in JSON format. CustomerResource files are not the standard format for translation export/import.

Using AML & Translations Upload allows administrators to maintain and update translations across multiple languages efficiently, ensuring consistent user experience in multi-lingual deployments.

NEW QUESTION # 12

A Migration is performed for a Greenfield deployment to production, and the status of the Template configuration type indicates that it Failed. What actions do you take to make the failed template(s) available in production?

- **A. Import the missing data in production and then import the template in production**
- B. The template must always be rebuilt in production
- C. Import the template in production
- D. Request SAP intervention

Answer: A

NEW QUESTION # 13

When performing migration to production for a Greenfield customer, which item needs to be made available in Production prior to creating the migration package in Intelligent Configuration Manager (ICM)?

- A. Users
- B. Locations
- C. Approval Rules
- **D. Translations**

Answer: D

Explanation:

Before creating and deploying migration packages with the Intelligent Configuration Manager (ICM), translation string resource files (custom field labels, help tips, validation messages, etc.) must be uploaded into Production via AML & Translations Upload. This

ensures that migration bundles referencing these translations do not cause missing label or localization issues post-migration. Locations, users, and approval rules are either migrated as part of configuration packages or managed separately, and do not require prior upload to Production before creating migration packages.

NEW QUESTION # 14

The customer wants to have a field to hold Contract Storage Locations and the address. Those locations are loaded from an external system, and the user should be able to search for storage locations.

What should be used to hold the valid storage locations?

- **A. You should create a new Flex Master Data (FMD) Template with appropriate attributes and call it Storage Location. Once the template is published and sample data loaded, you can create a custom field and select the type Storage Location**
- B. Create a new field of type Text, with a custom Validation where the available Storage Locations are listed.
- C. Create a new field of type Date, where each date entry is tied to a unique Storage Location and its corresponding address, allowing users to select locations based on historical data entries.
- D. You should load a new Enumeration Type and call it Storage Location and load the location addresses. Create a new field of type Enumeration with a custom filter to only Enumerations of type show Storage Locations.

Answer: A

NEW QUESTION # 15

.....

Test your knowledge of the C-ACDET-2506 exam dumps with SAP C-ACDET-2506 practice questions. The software is designed to help with C-ACDET-2506 exam dumps preparation. C-ACDET-2506 practice test software can be used on devices that range from mobile devices to desktop computers. We provide the C-ACDET-2506 Exam Questions in a variety of formats, including a web-based practice test, desktop practice exam software, and downloadable PDF files.
