NEW QUESTION # 15

You're looking to take an image and have a Generative AI solution generate additional content beyond the bounds of the current image size. What Generative AI approach can you use?

- A. Use of super#resolution to enhance the existing image
- B. Prompt engineering for new image generation
- C. Use of inpainting to replace image components
- D. Use of Generative Outpainting

Answer: D

It leverages the same learned representations as inpainting or super#resolution but focuses on generating entirely new regions around an existing image.

NEW QUESTION # 16

Your organization has just rolled out a new image recognition system and is asking all employees to use it. It was trained using images from the ImageNet test set. After a few weeks, users are finding the results are not as expected and are asking for visibility into all the aspects of what went into building an AI system. What area of Trustworthy AI is being addressed here?

- A. Explainable AI
- B. Governed AI
- C. Responsible AI
- D. AI Systemic Transparency
- E. Transparent AI

Answer: E

Explanation:

In CPMAI's Trustworthy AI framework, Transparent AI focuses on providing clear documentation of data sources, modeling approaches, evaluation methods, and deployment plans so that stakeholders can audit and understand how the system was built. The users' request for "visibility into all aspects" of model development, training data, and test sets directly maps to the Required AI Transparency Considerations task early in the methodology.

NEW QUESTION # 17

- B. **Take inventory of all data your company has and use the relevant data**
- C. Take inventory of all data your team has and use the relevant data
- D. Take all the existing data you have and apply it to this project
