

Pass Guaranteed Quiz 2026 High Hit-Rate Cisco 350-501 Free Practice

P.S. Free & New 350-501 dumps are available on Google Drive shared by TrainingQuiz: https://drive.google.com/open?id=1pEe9BFprP5ujW9WBj5Av_cYFnNDHlpky

350-501 is the authentic study guides with the latest exam material which can help you solve all the difficulties in the actual test. Our 350-501 free demo is available for all of you. You will receive an email attached with the 350-501 training dumps within 5-10 minutes after completing purchase. Immediately download for the 350-501 study pdf is available for study with no time wasted. We have money refund policy to ensure your interest in case the failure of 350-501 actual test.

Great concentrative progress has been made by our company, who aims at further cooperation with our candidates in the way of using our 350-501 exam engine as their study tool. Owing to the devotion of our professional research team and responsible working staff, our 350-501 training materials have received wide recognition and now, with more people joining in the 350-501 Exam army, we has become the top-raking training materials provider in the international market. we believe our 350-501 practice materials can give you a timely and effective helping for you to pass the exam.

350-501 Study Group & 350-501 Exam Simulations

We have free demo of our 350-501 exam questions offering the latest catalogue and brief contents for your information on the website, if you do not have thorough understanding of our 350-501 study materials. Many exam candidates build long-term relation with our company on the basis of our high quality 350-501 Guide engine. And our 350-501 training brandumps have become their best assistant on the way to pass the exam.

Cisco 350-501 Certification Exam is a valuable credential for IT professionals who want to advance their careers in the service provider industry. Implementing and Operating Cisco Service Provider Network Core Technologies certification can help candidates stand out to potential employers, demonstrate their expertise in complex networking technologies, and open up new job opportunities.

Cisco Implementing and Operating Cisco Service Provider Network Core Technologies Sample Questions (Q173-Q178):

NEW QUESTION # 173

How does Cisco MPLS TE use OSPF extensions to allow for optimized transit between a headend router and a destination router?

- A. Opaque LSAs calculate and establish unidirectional tunnels that are set according to the network constraint.
- B. ASBR Summary LSAs share OSPF domain information so that the two routers know how to reach each other during tunnel setup.
- C. Network LSAs share RSVP information to build the tunnel between the two routers.

- D. Router LSAs share router link advertisements to each router within the MPLS environment so that tunnels can be built bidirectionally.

Answer: A

Explanation:

Cisco MPLS TE uses OSPF extensions to allow for optimized transit between a headend router and a destination router by utilizing Opaque LSAs. Opaque LSAs allow for the calculation and establishment of unidirectional tunnels that are set according to the network constraint. The tunnels are built bidirectionally by utilizing Router LSAs, which share router link advertisements to each router within the MPLS environment.

ASBR Summary LSAs are also used to share OSPF domain information so that the two routers know how to reach each other during tunnel setup. Furthermore, Network LSAs are used to share RSVP information which is necessary for setting up the tunnel between the two routers.

NEW QUESTION # 174

Drag and drop the message types from the left onto the target field of the message originator on the right.

Answer:

Explanation:

NEW QUESTION # 175

A router is configured to perform MPLS LDP graceful restart.

Which three steps are included when the RP sends an LDP initialization to a neighbor to establish an LDP session? (Choose three)

- A. Reconnect Timeout field
- B. Type-9 LSA
- C. Learn from Neighbor (N) flag, set to 1
- D. Graceful restart capability in OPEN message
- E. Learn from Network (L.) flag, set to 1
- F. Recovery Time field

Answer: A,D,F

Explanation:

A) Reconnect Timeout field: Specifies the time within which the LDP session should be reestablished after a failure.

C) Graceful restart capability in OPEN message: Indicates that the router supports LDP graceful restart and is capable of maintaining its MPLS forwarding state across a control plane failure.

D) Recovery Time field: Specifies the time that the router will maintain the MPLS forwarding state while it attempts to reestablish LDP sessions.

NEW QUESTION # 176

Refer to the exhibit.

While troubleshooting the OSPF adjacency between routers R1 and R2 an engineer noticed that both routers are stuck in the EXCHANGE/EXSTART state. What should the engineer fix to solve the ongoing issue?

- A. match OSPF network types
- B. match MTU values
- C. match IPv4 addresses
- D. match OSPF areas

Answer: B

Explanation:

In OSPF, for two routers to form an adjacency, they must have matching MTU sizes on their connecting interfaces. If the MTUs are mismatched, OSPF adjacency will be stuck in the EXSTART/EXCHANGE state because OSPF hello packets will not be exchanged between the routers. In this case, both routers R1 and R2 are stuck in EXCHANGE/EXSTART state due to

mismatched MTU sizes as indicated in the exhibit. Reference: Implementing and Operating Cisco Service Provider Network Core Technologies (SPCOR) - Cisco

NEW QUESTION # 177

Refer to the exhibit. ISP A provides VPLS services and DDoS protection to Company XYZ to connect their branches across the North America and Europe regions. The uplink from the data center to the ISP is Mbps.

The company XYZ security team asked the ISP to redirect ICMP requests which are currently going to the web server to a new local security appliance which configuration must an ISPP engineer apply to router R2 to redirect the ICMP traffic?

- A.
- B.
- C.
- D.

Answer: D

Explanation:

The configuration should include a class-map that matches the ICMP traffic destined for the web server's IP address. This can be achieved by using an access control list (ACL) within the class-map to match the ICMP traffic. Then, a policy-map should be applied that sets the next hop to the IP address of the new security appliance. This policy-map is then applied to the appropriate interface on router R2 using the service-policy command.

The Implementing and Operating Cisco Service Provider Network Core Technologies (SPCOR) course provides detailed information on configuring class-maps and policy-maps for traffic redirection. Specifically, it covers topics related to VPLS services and DDoS protection, which are relevant to the scenario presented in the question. The course materials and official Cisco documentation serve as the primary references for this solution.

NEW QUESTION # 178

.....

Our excellent 350-501 study materials beckon exam candidates around the world with their attractive characters. Our experts made significant contribution to their excellence. So we can say bluntly that our 350-501 actual exam is the best. Our effort in building the content of our 350-501 Practice Questions lead to the development of practice materials and strengthen their perfection. So our 350-501 training prep is definitely making your review more durable.
