CompTIA Data+ Certification Exam Sample Questions (Q310-Q315):

NEW QUESTION # 310

Which of the following data types is best for representing count data?

- A. Continuous
- B. Referential
- C. Sequential
- D. Discrete

Answer: D

Explanation:

Comprehensive and Detailed In-Depth Explanation:

Count data refers to data that represents the number of occurrences of an event or the number of items in a set, which are whole numbers (integers). Understanding the nature of data types is crucial for accurate data analysis and representation.

* Discrete Data: This type of data consists of distinct, separate values. Discrete data is countable and often represents items that can be counted in whole numbers, such as the number of customers, defects, or occurrences. Since count data involves whole numbers, discrete data is the most appropriate representation.

* Referential Data: This pertains to data that establishes relationships between tables in a database, often using keys. It is not related to counting occurrences.

* Sequential Data: This involves data that follows a specific order or sequence, such as timestamps or ordered events. While it indicates order, it doesn't inherently represent count data.

* Continuous Data: This type of data can take any value within a range and is measurable rather than countable, such as height, weight, or temperature. Continuous data is not suitable for representing count data, as counts are discrete by nature.

Therefore, Discrete data is the best choice for representing count data, as it accurately reflects whole number counts of occurrences or items.

NEW QUESTION # 311

Which of the following data manipulation techniques is an example of a logical function?

- A. WHERE
- B. AGGREGATE
- C. BOOLEAN
- D. IF

Answer: D

Explanation:

Explanation

This is because an IF function is a type of logical function that returns a value based on a condition or a set of conditions. An IF function can be used to manipulate data by applying different actions or calculations depending on whether the condition is true or false. For example, an IF function in Excel that can achieve this is:

=IF (condition, value_if_true, value_if_false)

The other data manipulation techniques are not examples of logical functions. Here is why:

WHERE is a type of clause that filters data based on a condition or a set of conditions. A WHERE clause can be used to manipulate data by selecting only the rows that satisfy the condition(s). For example, a WHERE clause in SQL that can achieve this is:

□ AGGREGATE is a type of function that performs a calculation on a group of values, such as sum, average, count, etc. An AGGREGATE function can be used to manipulate data by summarizing or aggregating the values in a column or a table. For example, an AGGREGATE function in SQL that can achieve this is:

□ BOOLEAN is a type of data type that represents two possible values: true or false. A BOOLEAN data type can be used to manipulate data by storing or returning logical values based on a condition or a set of conditions. For example, a BOOLEAN data type in Python that can achieve this is:

NEW QUESTION # 312

An analyst is reporting on the average income for a county and is reviewing the following data:

Which of the following is the reason the analyst would need to cleanse the data in this data set?

- A. Missing values
- B. Data completeness
- C. Duplicate data
- **D. Data outliers**

Answer: D

NEW QUESTION # 313

Which of the following would be used to store unstructured data from different sources?

- **A. A data lake**
- B. A database
- C. A data warehouse

Answer: A

NEW QUESTION # 314

You are working with a professional statistician to perform an analysis and would like to use a statistics package.

Which one of the following would be the most appropriate?

- **A. Minitab.**
- B. QLIK.
- C. Power BI.
- D. Rapid Miner.

Answer: A

Explanation:

Explanation:

Minitab is statistical analysis software. It can be used for learning about statistics as well as statistical research. Statistical analysis computer applications have the advantage of being accurate, reliable, and generally faster than computing statistics and drawing graphs by hand.
