

Latest Updated Forcepoint DSPM-Deploy-and-Administer Real Torrent - DSPM-Deploy-and-Administer Certified Forcepoint DSPM - Professional: Deploy and Administer Exam

Our DSPM-Deploy-and-Administer study questions will update frequently to guarantee that you can get enough test banks and follow the trend in the theory and the practice. That is to say, our product boosts many advantages and to gain a better understanding of our Certified Forcepoint DSPM - Professional: Deploy and Administer Exam guide torrent. It is very worthy for you to buy our product and please trust us. If you still can't fully believe us, please read the introduction of the features and the functions of our product as follow.

Forcepoint DSPM-Deploy-and-Administer Exam Syllabus Topics:

Section	Objectives
Preparing and Deploying Forcepoint DSPM	- Lab Environment Preparation - DSPM Deployment Architecture - User Management Configuration - Data Source Configuration
Pattern Matching and Classification	- Sensitive Data Identification - Custom Pattern Creation - Regular Expressions - Classification Policies
Compliance Hub and Data Register	- Security Posture Policies - Metadata Management - Departments Configuration - Data Asset Inventory
Analytics and Dashboards	- Risk Analysis and Reporting - Enterprise Search - Analytic Dashboards - Dashboard Customization
Detector Configuration	- Keyword Detectors - Regular Expression Detectors - Path Detectors - Detector Testing and Validation
Controls Orchestration	- Risk Classification - Webhook Configuration - Incident Investigation - Rule Creation and Management

Data Discovery and Scanning

- SMB Data Sources
- LDAP Integration
- Scan Configuration
- Data Visibility and Monitoring

DSPM-Deploy-and-Administer Valid Exam Practice & DSPM-Deploy-and-Administer Practice Questions

If you haplessly fail the DSPM-Deploy-and-Administer exam, we treat it as our responsibility then give you full refund and get other version of DSPM-Deploy-and-Administer practice material for free. That is why we win a great deal of customers around the world. Especially for those time-sensitive and busy candidates, all three versions of DSPM-Deploy-and-Administer Exam Questions can be chosen based on your preference. Such as app version of our DSPM-Deploy-and-Administer learning guide, you can learn it using your phone without the limitation of place or time.

Forcepoint Certified Forcepoint DSPM - Professional: Deploy and Administer Exam Sample Questions (Q26-Q31):

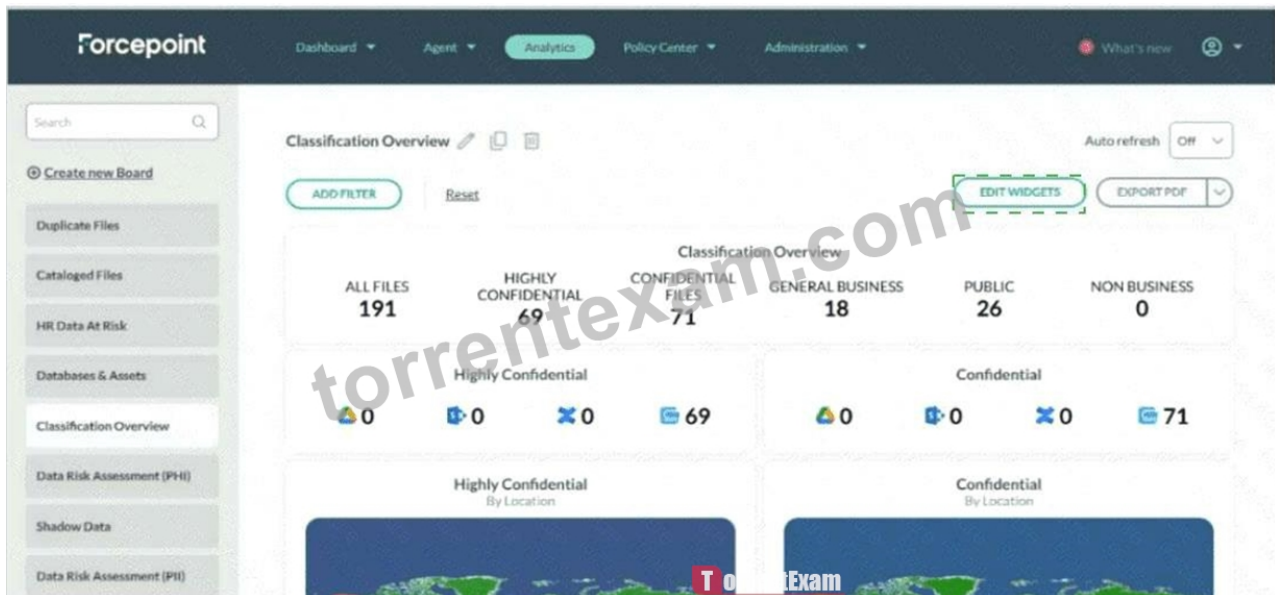

NEW QUESTION # 26

Ella needs to add a panel to the following dashboard. Where would she click to have access to add a panel to the dashboard?

Answer:

Explanation:

Explanation:

Click EDIT WIDGETS in the upper-right area of the dashboard.

Ella should click the EDIT WIDGETS button near the upper-right side of the dashboard, beside the EXPORT PDF button. This control opens the dashboard edit view, which exposes the controls required to modify dashboard content, including adding widgets and adding panels. In the screenshot, the correct click target is the green-outlined EDIT WIDGETS button above the dashboard panels.

Forcepoint documents dashboards as being primarily constructed from panels and widgets . A panel is the container that organizes one or more widgets, while widgets display selected datasets such as files, trustees, connectors, agents, or other DSPM analytics data. The Forcepoint documentation specifically states: "Edit Widgets: Click the Edit Widget button, to open the edit view." It then lists Add widget and Add panel as functions available from that edit mode.

Therefore, Ella cannot add a panel by clicking the existing charts, the left navigation list, or the dashboard title. She must first enter edit mode through EDIT WIDGETS , then use the available Add panel option.

References/topics: Analytics, Components of a Dashboard, Edit Widgets, Add Panel, Panels and Widgets

NEW QUESTION # 27

Which of the following describes a use case for Forcepoint DSPM pattern matching?

- A. Identifying and redacting personally identifiable information on OneDrive.
- B. Identifying personally identifiable information on SharePoint.
- C. Identifying personally identifiable information in Outlook and Gmail emails.
- D. Identifying and encrypting personally identifiable information on Google Drive.

Answer: B

Explanation:

Forcepoint DSPM pattern matching is used to identify defined pieces of information inside scanned content by applying regular expressions. The documented function is discovery and classification: pattern matching identifies particular information in a document by using RegEx that attempts to match file content. This makes identifying personally identifiable information on SharePoint the correct use case. SharePoint is a supported Microsoft data source for scanning, and Forcepoint specifically documents SharePoint Online as a connector used to scan SharePoint accounts and apply classification tags to files containing sensitive data stored in SharePoint.

The key distinction is that pattern matching does not perform remediation actions such as redaction or encryption. Options B and D therefore overstate the capability: Forcepoint DSPM may discover and classify sensitive data that later informs controls, but the pattern itself is not a redaction or encryption engine. Option A is less precise in this context because the question is testing the canonical pattern-matching use case against scanned documents and repositories, while the strongest documented repository example among the choices is SharePoint. Pattern configuration can also assign classification, compliance, and distribution tags when a RegEx is detected, such as GDPR/PII tagging for identifiers. References/topics: Pattern Matching, RegEx, Compliance Tags, SharePoint Scanning, Sensitive Data Classification .

NEW QUESTION # 28

What is the role of the File Audit Log in Forcepoint DSPM?

- A. To display who has access to the file.
- B. To display who has last accessed the file.
- **C. To display the status of data scanning and any errors.**
- D. To display the number of discovered files from a data scan.

Answer: C

Explanation:

The correct answer is D. To display the status of data scanning and any errors . In Forcepoint DSPM, the File Audit Log is tied to scan processing and file-level scan events. Forcepoint's GraphQL reference defines the File Audit Log as "events associated with scanning of files," and lists fields such as source , eventType , functionalityName , moduleName , createdAt , message , path , fileId , scanId , and configurationId .

Those fields are designed to explain what happened to a file during the scan/classification process, including the relevant scan, module, event, and message detail.

This aligns with the scan analytics workflow. Forcepoint documents that when files are not classified, the interface can show the event indicating the classification failure, the file path, and the reason for the failure. It then allows the user to view the file audit log filtered by not-classified events, scan, and reason.

The other options describe different DSPM views. File access permissions are handled through access governance, discovered-file totals appear in scan analytics summaries, and last access information is a separate file activity or metadata concept.

References/topics: Scan Analytics, File Audit Log, GraphQL File Audit Log Dataset, Scan Events, Classification Errors .

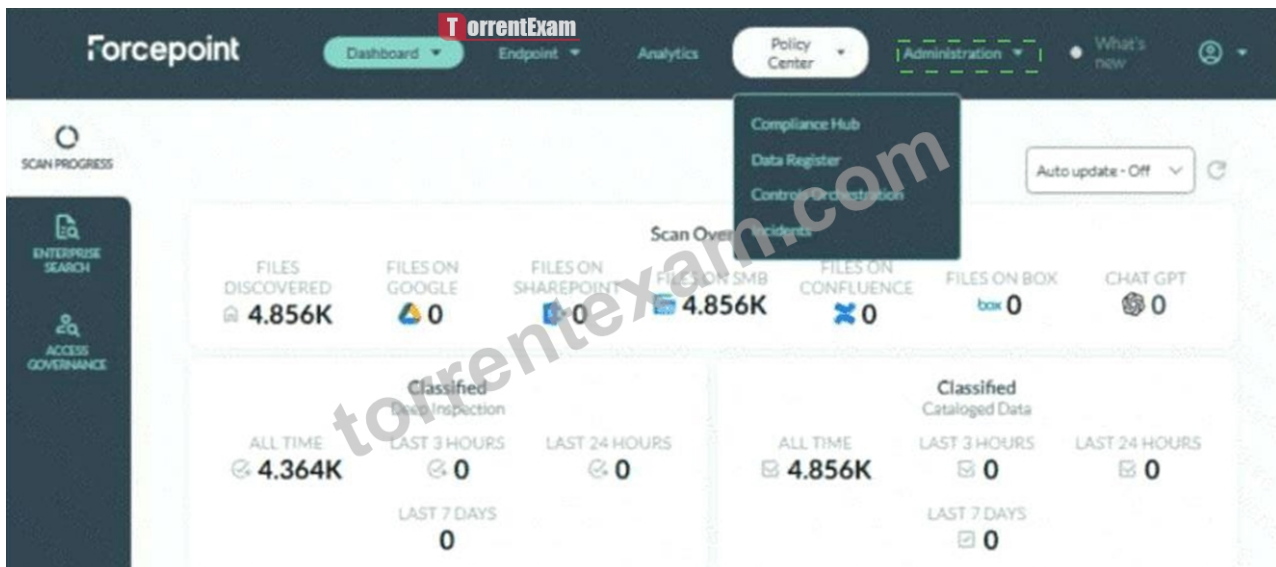

NEW QUESTION # 29

Adam needs to update the taxonomy tags in Forcepoint DSPM to match his company's policies. Where on the UI are taxonomy tags managed?

Answer:

Explanation:

Explanation:

Administration > Taxonomy

Taxonomy tags are managed from the Administration menu, specifically under Administration > Taxonomy . In the screenshot, Adam should not select Policy Center ; the currently open menu shows Compliance Hub, Data Register, Controls Orchestration, and Incidents, but taxonomy management is not located there. The correct UI action is to open the Administration drop-down on the top navigation bar and select Taxonomy .

Forcepoint's DSPM documentation states that the Taxonomy page displays predefined AI Mesh tags, which cannot be removed, and also allows administrators to add custom tags for pattern matching and detection rules. It further explains that taxonomy mapping can connect AI Mesh tags with data-source taxonomies so mapped tags can be written back as the organization's own labels. This location is important because taxonomy governs the classification language DSPM applies to scanned data. By updating taxonomy tags, Adam aligns DSPM classification output with the company's internal handling policies, sensitivity labels, and compliance terminology. Forcepoint also notes that new taxonomy tags are created from the Taxonomy tab under the Administration section, and that applied tags are visible in the Data Asset Inventory. References/topics: Administration, Taxonomy, AI Mesh Tags, Classification Tags, Pattern Matching, Detection Rules .

NEW QUESTION # 30

Which of the following is NOT a widget type available in Forcepoint DSPM dashboards?

- A. Heatmap
- B. Counter
- C. Chart
- D. Text

Answer: A

Explanation:

The correct answer is B. Heatmap . Forcepoint DSPM dashboards are built from configurable widgets that present scan, access, classification, and risk data in different visual formats. The official Forcepoint DSPM widget list includes Counter , Chart , Map , Text , Table , Incidents , Dual Data Grouping , and Multi Counter . Heatmap is not listed as an available dashboard widget type. The other answer choices are valid widget types. Counter widgets provide quick numerical summaries, such as counts of sensitive files, risky users, or matching records from selected datasets. Forcepoint describes Counter widgets as useful for at-a-glance metrics and supports aggregation functions such as count, sum, average, min, max, and median. Chart widgets visualize grouped data using supported chart formats, including horizontal bar, vertical bar, line, area, or pie charts. Text widgets are also part of the documented widget list and are used for static explanatory or contextual information on a board.

Therefore, Heatmap is the non-valid option. References/topics: Analytics, Dashboards, Widgets, Counter, Chart, Text, Dashboard Components .

NEW QUESTION # 31

.....

Normally, you will come across almost all of the real test questions on your usual practice. Maybe you are doubtful about our

DSPM-Deploy-and-Administer training questions. We have statistics to tell you the truth. The passing rate of our products is the highest according to the investigation. Many candidates can also certify for our DSPM-Deploy-and-Administer Study Materials. As long as you are willing to trust our DSPM-Deploy-and-Administer preparation materials, you are bound to get the certificate.
