2026 Trustable 100% Free CIS-DF–100% Free Valid Exam Tips | Certified Implementation Specialist - Data Foundations (CMDB and CSDM) Latest Test Testking

If you have interests with our CIS-DF practice materials, we prefer to tell that we have contacted with many former buyers of our CIS-DF exam questions and they all talked about the importance of effective CIS-DF practice material playing a crucial role in your preparation process. Our CIS-DF practice materials keep exam candidates motivated and efficient with useful content based wholly on the real CIS-DF guide materials. There are totally three versions of CIS-DF practice materials which are the most suitable versions for you: pdf, software and app versions.

We are proud that our ServiceNow CIS-DF exam preparation material is one of the best in the market. You should buy our Certified Implementation Specialist - Data Foundations (CMDB and CSDM) (CIS-DF) valid dumps and start preparation now because of some amazing offers. These offers are up to 1 year of Free CIS-DF Dumps updates, free demos of our CIS-DF exam product, and a full refund guarantee. What are you waiting for? Buy actual ServiceNow CIS-DF now at discount and start your preparation.

Free PDF CIS-DF - Newest Certified Implementation Specialist - Data Foundations (CMDB and CSDM) Valid Exam Tips

Our company is a well-known multinational company, has its own complete sales system and after-sales service worldwide. In the same trade at the same time, our CIS-DF real study dumps have become a critically acclaimed enterprise, so, if you are preparing for the exam qualification and obtain the corresponding certificate, so our company launched CIS-DF exam questions are the most reliable choice of you. The service tenet of our company and all the staff work mission is: through constant innovation and providing the best quality service, make the CIS-DF question guide become the best customers electronic test study materials. No matter where you are, as long as you buy the CIS-DF real study dumps, we will provide you with the most useful and efficient learning materials. As you can see, the advantages of our research materials are as follows.

ServiceNow Certified Implementation Specialist - Data Foundations (CMDB and CSDM) Sample Questions (Q55-Q60):

NEW QUESTION # 55
The Apache Web Server Identification Rule is configured with the following criterion attributes:
Class
Configuration file
Version
☐
Yesterday, an Apache Web Server CI was discovered as part of Service Mapping.
Today, the application owner upgraded Apache to a different version and reran discovery of the service.
What will happen in the CMDB?

- A. A duplication error will occur.
- B. The Apache Web Server CI will be reclassified as a Web Server CI.

- C. A new Apache Web Server CI is created.
- D. The existing Apache Web Server CI will be reconciled and its version will be updated.

Answer: C

Explanation:
This scenario hinges on how theIdentification and Reconciliation Engine (IRE) inServiceNowevaluatesidentification rules.
The identification rule for theApache Web Serverclass includesVersionas part of theidentifier criteria, along with Class and Configuration file. Identification rules must matchall criterion attributes exactlyfor an incoming record to be identified as an existing CI and reconciled.
Yesterday's discovery created an Apache Web Server CI with a specific version value. When Apache is upgraded and discovery is rerun, theVersion attribute changes. Because Version is part of the identifier, the incoming recordno longer matchesthe existing CI's identifier entry. As a result, the IREcannot identify the existing CIas the same configuration item.
When identification fails and no matching identifier entry is found, the IRE proceeds toinsert a new CI recordrather than updating the existing one. This behavior is intentional and protects the CMDB from incorrectly reconciling records that no longer meet identification criteria.
Option A is incorrect because reconciliation only occursafter successful identification.
Option C is incorrect because reclassification is unrelated to identification criteria.
Option D is incorrect because this is not an error condition; it is expected IRE behavior.
This example highlights abest practice caution:volatile attributes (such as Version)should generallynot be used as identifier attributes, as they can cause unintended CI duplication during upgrades.

NEW QUESTION # 56
A CMDB Administrator identifies duplicate CIs. One was created by a manual import, and the other was created by automated discovery. The discovered CI has the latest IP address, while the manually imported CI has an accurate relationship to a critical business application.
How does the Administrator use theDuplicate CI Remediatorto resolve this issue?

- A. Retain the discovered CI and delete the manually imported CI
- B. Retain the manually imported CI and delete the discovered CI
- C. Retain the discovered CI, but merge the relationship from the manually imported CI
- D. Merge the two CIs automatically, retaining all attributes from the discovered CI

Answer: C

Explanation:
InServiceNow, theDuplicate CI Remediatoris designed to resolve duplicate records while preserving themost authoritative datafrom each source. Data Foundations guidance clearly states thatautomated discovery is the system of record for technical attributes, such as IP address, hostname, and operational status, while manually maintained records often containinvaluable business context, such as relationships to business applications or services.
In this scenario, the discovered CI contains the most accurate and up-to-datetechnical data, making it the correct CI to retain as the primary record. However, the manually imported CI has acritical relationship to a business application, which is essential for impact analysis, incident prioritization, and CSDM alignment.
Deleting this CI without preserving the relationship would result in loss of business context and reduced CMDB value.
The Duplicate CI Remediator supportsselective merging, allowing administrators to retain one CI while merging specific attributes or relationships from the duplicate. Option C reflects this best practice by retaining the discovered CI and merging the relationship from the manually imported CI, ensuring both technical accuracy and business relevance are preserved.
Options A and D would result in the loss of important relationship data, while Option B would discard the discovered CI, violating the principle that discovery should be the authoritative source for technical attributes.
Therefore,Option Cis the correct and Data Foundations-aligned answer.

NEW QUESTION # 57
An organization is updating the CMDB to include new asset types like loT devices Relevant CI classes need to be added and outdated ones need to be removed from the Principal Class filler to ensure accurate display in ITSM processes.
Which roles are needed to add or remove classes?

- A. personalize.dictionary
- B. sn_csdm_admin
- C. sn_cmdb_admin

- D. cmdb_query_ builder

Answer: A,C

Explanation:
ManagingCI classes and Principal Class designationis aschema-level CMDB activitythat directly impacts how CIs appear in ITSM processes such as Incident, Change, and Problem. InServiceNow, these activities require specific administrative privileges to ensure governance, security, and upgrade safety.
Thesn_cmdb_adminrole is required because it provides administrative access to CMDB structures, including CI class hierarchy management, Principal Class configuration, and overall CMDB governance. Without this role, users cannot add, remove, or govern CI classes effectively.
Thepersonalize_dictionaryrole is also required because adding or removing CI classes involvesdictionary- level changes. CI classes are implemented as tables that extend the CMDB schema, and modifying the Principal Class filter relies on dictionary metadata. This role grants permission to create, modify, or remove class definitions safely.
Thesn_csdm_adminrole focuses on managing CSDM constructs (domains, services, lifecycle alignment) but does not grant dictionary or schema modification rights. Thecmdb_query_builderrole is used only for querying and reporting and does not allow structural changes.
Therefore, the two required roles arepersonalize.dictionaryandsn_cmdb_admin, makingOptions A and Bcorrect.

NEW QUESTION # 58
(Choose 2 options)
A Change Manager wants to gain value fromCSDM.
How will theChange Managementprocess benefit fromCSDM?

- A. Determine the root cause of the change issue
- B. Route the change dynamically
- C. Understand the impact of the change on services
- D. Identify blackout windows

Answer: C,D

Explanation:
CSDM significantly enhancesChange Managementby providingservice-aware context, enabling better planning, risk assessment, and stakeholder communication.
One key benefit is the ability toidentify blackout windows(Option A). Through CSDM-alignedBusiness Services, Service Offerings, and service calendars, Change Managers can clearly see when services are unavailable for change due to business constraints, regulatory requirements, or peak usage periods. This helps prevent changes from being scheduled during high-risk windows.
Another critical benefit is the ability tounderstand the impact of the change on services(Option D). CSDM establishes clear relationships between infrastructure CIs, Application Services, and Business Services. When a change is proposed, these relationships enable accurateimpact analysis, allowing Change Managers to assess risk based on business criticality rather than just technical scope.
Option B (root cause determination) is primarily aProblem Managementfunction. Option C (dynamic routing of changes) is driven by workflow and approval logic, not directly by CSDM.
Therefore, the correct answers areA - Identify blackout windowsandD - Understand the impact of the change on services.

NEW QUESTION # 59
The CMDB Configuration Manager is using theCI Class Managerto define group ownership of CI classes and needs to leverage the ownership value specified in the CI Class Manager.
When creating aCMDB Data Manager policy, whichgroup reference fieldshould be set?

- A. Managed By Group
- B. Approval Group
- C. Support Group
- D. Change Group

Answer: A

Explanation:
In ServiceNow CMDB governance, theCI Class Managerallows administrators to assignownership and accountabilityat the class

level. This ownership is used by governance tools-especiallyCMDB Data Manager-to automatically determinewho receives tasks and actionsrelated to data lifecycle management.

The group reference field that aligns with class ownership and is consumed byCMDB Data Manager policiesis theManaged By Group. This field represents the team responsible for thetechnical stewardship and lifecycle managementof CIs within that class. When CMDB Data Manager executes policies such as retention, archival, or cleanup, it uses theManaged By Groupto assign tasks to the appropriate data owners. This ensures governance actions are routed to the correct accountable team without manual intervention.

Approval Group, Support Group, and Change Group serve different purposes. Approval Group is used for workflow approvals, Support Group is used for operational ticket routing, and Change Group supports Change Management governance. None of these reflectdata ownership at the class level.

Therefore, to leverage CI class ownership defined in the CI Class Manager within CMDB Data Manager policies, the correct field isManaged By Group, makingOption Bthe verified answer.

NEW QUESTION # 60

......

We are concerted company offering tailored services which include not only the newest and various versions of CIS-DF practice guide, but offer one-year free updates of our CIS-DF exam questions services with patient staff offering help 24/7. So there is considerate and concerted cooperation for your purchasing experience accompanied with patient staff with amity. Their enrichment is dependable and reliable on the CIS-DF training braindumps.

CIS-DF Latest Test Testking: https://www.actual4test.com/CIS-DF_examcollection.html

You will find everything you need in real exam from our CIS-DF free demo, ServiceNow CIS-DF Valid Exam Tips With great outcomes of the passing rate upon to 98-100 percent, our practice materials are totally the perfect one, Our CIS-DF practice questions have been commonly known as the most helpful examination support materials and are available from global internet storefront, Actual4test believes in customer satisfaction and strives hard to make the entire ServiceNow CIS-DF exam preparation process simple, smart, and successful.

Thanks for your great exam questions, Let's New CIS-DF Real Test take a look at both, You will find everything you need in real exam from our CIS-DF free demo, With great outcomes of the passing CIS-DF rate upon to 98-100 percent, our practice materials are totally the perfect one.

100% Pass CIS-DF Certified Implementation Specialist - Data Foundations (CMDB and CSDM) Marvelous Valid Exam Tips

Our CIS-DF practice questions have been commonly known as the most helpful examination support materials and are available from global internet storefront, Actual4test believes in customer satisfaction and strives hard to make the entire ServiceNow CIS-DF exam preparation process simple, smart, and successful.

Actual4test is offering ServiceNow CIS-DF Dumps questions, especially for applicants who want to prepare quickly for the Certified Implementation Specialist - Data Foundations (CMDB and CSDM) test.
