

Valid Associate-Cloud-Engineer Exam Questions, Reliable Associate-Cloud-Engineer Test Cram

What's more, part of that ValidTorrent Associate-Cloud-Engineer dumps now are free: <https://drive.google.com/open?id=11pip2natr-qxQq7I7nOx1LMb4YRa4l8q>

The meaning of qualifying examinations is, in some ways, to prove the candidate's ability to obtain Associate-Cloud-Engineer qualifications that show your ability in various fields of expertise. If you choose our Associate-Cloud-Engineer learning guide materials, you can create more unlimited value in the limited study time, learn more knowledge, and take the exam that you can take. Through qualifying Associate-Cloud-Engineer examinations, this is our Associate-Cloud-Engineer real questions and the common goal of every user, we are trustworthy helpers, so please don't miss such a good opportunity.

Google Associate-Cloud-Engineer Certification Exam is an entry-level certification exam that tests an individual's ability to deploy, monitor, and manage Google Cloud Platform (GCP) projects. Google Associate Cloud Engineer Exam certification exam is designed for individuals who are looking to start a career in cloud engineering and want to demonstrate their foundational knowledge of GCP. Google Associate Cloud Engineer Exam certification exam covers a variety of topics related to GCP, including cloud services, compute, networking, storage, security, and management.

Reliable Associate-Cloud-Engineer Test Cram - Associate-Cloud-Engineer Trustworthy Exam Content

With our numerous advantages of our Associate-Cloud-Engineer latest questions and service, what are you hesitating for? Our company always serves our clients with professional and precise attitudes, and we know that your satisfaction is the most important thing for us. We always aim to help you pass the Associate-Cloud-Engineer Exam smoothly and sincerely hope that all of our candidates can enjoy the tremendous benefit of our Associate-Cloud-Engineer exam material, which might lead you to a better future!

The Google Associate-Cloud-Engineer exam is intended for individuals who have hands-on experience in working with Google Cloud Platform and are familiar with the fundamental concepts of cloud computing. Google Associate Cloud Engineer Exam certification is ideal for professionals such as system administrators, cloud architects, and developers who want to demonstrate their expertise in Google Cloud Platform. Associate-Cloud-Engineer Exam is conducted online and consists of multiple-choice questions that are designed to test the candidate's knowledge of Google Cloud Platform services.

Google Associate Cloud Engineer Exam Sample Questions (Q394-Q399):

NEW QUESTION # 394

You need to provide a cost estimate for a Kubernetes cluster using the GCP pricing calculator for Kubernetes. Your workload requires high IOPs, and you will also be using disk snapshots. You start by entering the number of nodes, average hours, and average days. What should you do next?

- A. Fill in local SSD. Add estimated cost for cluster management.

- B. Fill in local SSD. Fill in persistent disk storage and snapshot storage.
- C. Select Add GPUs. Fill in persistent disk storage and snapshot storage.
- D. Select Add GPUs. Add estimated cost for cluster management.

Answer: B

Explanation:

Local SSD is sufficient for high IOPS.

NEW QUESTION # 395

You create a new Google Kubernetes Engine (GKE) cluster and want to make sure that it always runs a supported and stable version of Kubernetes. What should you do?

- A. Enable the Node Auto-Upgrades feature for your GKE cluster.
- B. Select "Container-Optimized OS (cos)" as a node image for your GKE cluster.
- C. Enable the Node Auto-Repair feature for your GKE cluster.
- D. Select the latest available cluster version for your GKE cluster.

Answer: A

Explanation:

NEW QUESTION # 396

You have an instance group that you want to load balance. You want the load balancer to terminate the client SSL session. The instance group is used to serve a public web application over HTTPS. You want to follow Google-recommended practices. What should you do?

- A. Configure an external TCP proxy load balancer.
- B. Configure an internal TCP load balancer.
- C. Configure an HTTP(S) load balancer.
- D. Configure an external SSL proxy load balancer.

Answer: C

Explanation:

NEW QUESTION # 397

Every employee of your company has a Google account. Your operational team needs to manage a large number of instances on Compute Engine. Each member of this team needs only administrative access to the servers. Your security team wants to ensure that the deployment of credentials is operationally efficient and must be able to determine who accessed a given instance. What should you do?

- A. Generate a new SSH key pair. Give the private key to each member of your team. Configure the public key in the metadata of each instance.
 - B. Ask each member of the team to generate a new SSH key pair and to send you their public key. Use a configuration management tool to deploy those keys on each instance.
 - C. Ask each member of the team to generate a new SSH key pair and to add the public key to their Google account. Grant the "compute.osAdminLogin" role to the Google group corresponding to this team.
 - D. Generate a new SSH key pair. Give the private key to each member of your team. Configure the public key as a project-wide public SSH key in your Cloud Platform project and allow project-wide public SSH keys on each instance.
- <https://cloud.google.com/compute/docs/instances/managing-instance-access>

Answer: C

NEW QUESTION # 398

You have a workload running on Compute Engine that is critical to your business. You want to ensure that the data on the boot disk of this workload is backed up regularly. You need to be able to restore a backup as quickly as possible in case of disaster. You also want older backups to be cleaned automatically to save on cost. You want to follow Google-recommended practices. What should you do?

- A. Create a snapshot schedule for the disk using the desired interval.
- B. Create a cron job to create a new disk from the disk using gcloud.
- C. Create a Cloud Function to create an instance template.
- D. Create a Cloud Task to create an image and export it to Cloud Storage.

Answer: A

Explanation:

Best practices for persistent disk snapshots

You can create persistent disk snapshots at any time, but you can create snapshots more quickly and with greater reliability if you use the following best practices.

Creating frequent snapshots efficiently

Use snapshots to manage your data efficiently.

Create a snapshot of your data on a regular schedule to minimize data loss due to unexpected failure.

Improve performance by eliminating excessive snapshot downloads and by creating an image and reusing it.

Set your snapshot schedule to off-peak hours to reduce snapshot time.

Snapshot frequency limits

Creating snapshots from persistent disks

You can snapshot your disks at most once every 10 minutes. If you want to issue a burst of requests to snapshot your disks, you can issue at most 6 requests in 60 minutes.

If the limit is exceeded, the operation fails and returns the following error:

<https://cloud.google.com/compute/docs/disks/snapshot-best-practices>
