

Valid AZ-800 Exam Labs - Actual AZ-800 Test Answers

P.S. Free 2026 Microsoft AZ-800 dumps are available on Google Drive shared by ActualTorrent: https://drive.google.com/open?id=1306tEz-v0Ny6aBr_0W3BwqN2_2hln5ku

By attempting these Administering Windows Server Hybrid Core Infrastructure (AZ-800) mock exams, you can enhance your confidence and overcome weaknesses. The AZ-800 desktop software of ActualTorrent works offline on Windows computers. The web-based Microsoft AZ-800 Practice Exam is compatible with all operating systems and browsers.

Microsoft AZ-800 certification exam is designed to test the skills and knowledge of IT professionals who are responsible for administering and managing Windows Server Hybrid Core Infrastructure. AZ-800 exam covers a wide range of topics related to the planning, deployment, configuration, and maintenance of hybrid cloud environments that incorporate both on-premises and cloud-based resources.

Microsoft AZ-800 exam is a certification test designed for IT professionals who are responsible for administering and managing Windows Server hybrid infrastructures. AZ-800 Exam is intended for individuals who possess a good understanding of Windows Server technologies and how they can be integrated with cloud-based solutions. The goal of the exam is to validate the skills and knowledge of IT professionals in this domain so that they can effectively deploy and manage hybrid infrastructures.

100% Pass 2026 Authoritative Microsoft Valid AZ-800 Exam Labs

One of the key factors for passing the exam is practice. Candidates must use Microsoft AZ-800 practice test material to be able to perform at their best on the real exam. This is why ActualTorrent has developed three formats to assist candidates in their Microsoft AZ-800 Preparation. These formats include desktop-based Microsoft AZ-800 practice test software, web-based practice test, and a PDF format.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q69-Q74):

NEW QUESTION # 69

Your network contains an Active Directory Domain Services (AD DS) forest named contoso.com. The root domain contains the

domain controllers shown in the following table.

A failure of which domain controller will prevent you from creating application partitions?

- A. DC5
- **B. DC1**
- C. DC2
- D. DC3
- E. DC4

Answer: B

Explanation:

Reference:

NEW QUESTION # 70

Your network contains an Active Directory domain, a web app named App1, and a perimeter network. The perimeter network contains a server named Server1 that runs Windows Server.

You plan to provide external access to App1.

You need to implement the Web Application Proxy role service on Server1.

Which role should you add to Server1, and which role should you add to the network? To answer, drag the appropriate roles to the correct targets. Each role may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer:

Explanation:

NEW QUESTION # 71

You have an Azure subscription named sub1 and 500 on-premises virtual machines that run Windows Server.

You plan to onboard the on-premises virtual machines to Azure Arc by running the Azure Arc deployment script.

You need to create an identity that will be used by the script to authenticate access to sub1. The solution must use the principle of least privilege.

How should you complete the command? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

NEW QUESTION # 73

You have servers that have the DNS Server role installed. The servers are configured as shown in the following table.

□ All the client computers in the New York office use Server2 as the DNS server.
 You need to configure name resolution in the New York office to meet the following requirements:
 Ensure that the client computers in New York can resolve names from contoso.com.
 Ensure that Server2 forwards all DNS queries for internet hosts to 131.107.100.200.
 The solution must NOT require modifications to Server1.
 Each correct answer presents part of the solution.
 NOTE: Each correct selection is worth one point.

- A. a conditional forwarder
- B. a secondary zone
- C. a delegation
- D. a forwarder
- E. a reverse lookup zone

Answer: A,D

Explanation:

Infrastructure documents: =

In the Windows Server DNS guidance for hybrid core infrastructure, Microsoft specifies that forwarders send "all queries for names that the DNS server cannot resolve locally to a designated upstream server," while conditional forwarders target "queries for a specific DNS domain to one or more authoritative DNS servers for that domain." When a branch office DNS server must resolve a partner/remote domain hosted elsewhere in the organization and you cannot change the authoritative server, the recommended pattern is to configure a conditional forwarder on the branch server pointing to the remote authoritative server.

For Internet name resolution, you configure a standard forwarder to the required recursive resolver IP.

Applied here: New York clients use Server2. To resolve contoso.com (hosted on Server1), create a conditional forwarder on Server2 for contoso.com that points to 10.1.1.1 (Server1). To meet the requirement to forward all other external lookups, configure a forwarder on Server2 to 131.107.100.200. This design avoids zone transfers or changes on Server1 and fulfills both name-resolution requirements with minimal administration.

NEW QUESTION # 74

.....

The valid Administering Windows Server Hybrid Core Infrastructure (AZ-800) practice tests are available in AZ-800 pdf format which works on all smart devices. When you have all the actual AZ-800 questions in a pdf document, it will be easy for you to prepare successfully for the AZ-800 test in a short time. Practice makes a man perfect and we can apply the same thing here.
