CompTIA Linux+ Certification Exam Sample Questions (Q56-Q61):

NEW QUESTION # 56
A Linux administrator wants to add a user to the Docker group without changing their primary group. Which of the following commands should the administrator use to complete this task?

- A. sudo usermod -g docker user
- B. sudo groupmod -G docker user

- C. sudo usermod -aG docker user
- D. sudo groupmod docker user

Answer: C

Explanation:
The usermod -aG command appends (-a) the user to a supplementary group (-G) without changing their primary group. This is the correct way to add a user to the docker group.

NEW QUESTION # 57
After system startup, the X Window System GUI login interface is not displaying. Which of the following commands ensures that the GUI is started during the system startup process?

- A. systemctl set-default graphical.target
- B. systemctl enable xwindow.service
- C. systemctl isolate graphical.target
- D. systemctl unmask xwindow.service

Answer: A

Explanation:
Setting the default target to graphical.target tells systemd to boot into the graphical interface on startup. The command systemctl set-default graphical.target makes the GUI login display automatically at boot.

NEW QUESTION # 58
Which of the following best describes JSON?

- A. A software-based technique that allows a computer to simulate one or more machines so they appear to be real
- B. A file format for exchanging information or data between systems
- C. An open-source platform that facilitates the creation and administration of isolated environments
- D. A programming language that developers use to build dynamic websites

Answer: B

Explanation:
JSON (JavaScript Object Notation) is a lightweight data-interchange format that is easy for humans to read and write, and easy for machines to parse and generate. JSON is commonly used to transmit data between a server and a client, as it is language-independent and can be used in many environments.

NEW QUESTION # 59
A systems administrator wants to review the logs from an Apache 2 error.logfile in real time and save the information to another file for later review. Which of the following commands should the administrator use?

- A. tail -f /var/log/apache2/error.log | logfile.txt
- B. tail -f /var/log/apache2/error.log > logfile.txt
- C. tail -f /var/log/apache2/error.log >> logfile.txt
- D. tail -f /var/log/apache2/error.log | tee logfile.txt

Answer: D

Explanation:
Using tee allows output to be viewed in real time on the terminal while simultaneously writing it to logfile.txt. This meets both requirements: monitoring live updates and saving them for later review.

NEW QUESTION # 60
A systems administrator needs to open the DNS TCP port on a Linux system from network 10.0.0.0/24. Which of the following commands should the administrator use for this task?

- A. ufw allow dns/tcp to 10.0.0.0/24
- B. ufw enable 53/tcp from 10.0.0.0/24
- C. ufw allow 53/tcp from 10.0.0.0/24
- D. ufw disable from 10.0.0.0/24

Answer: C

Explanation:
The ufw allow 53/tcp from 10.0.0.0/24 command explicitly opens TCP port 53 (DNS) for connections coming from the 10.0.0.0/24 network, which is the correct way to configure this firewall rule.
