## Related Microsoft MB-335 Exams & MB-335 Exam Dumps Pdf

Our MB-335 prep torrent boosts the highest standards of technical accuracy and only use certificated subject matter and experts. We provide the latest and accurate Microsoft Dynamics 365 Supply Chain Management Functional Consultant Expert exam torrent to the client and the questions and the answers we provide are based on the real exam. We can promise to you the passing rate is high and about 98%-100%. Our MB-335 test braindumps also boosts high hit rate and can stimulate the exam to let you have a good preparation for the exam. Our MB-335 prep torrent boost the timing function and the content is easy to be understood and has been simplified the important information. Our MB-335 test braindumps convey more important information with less amount of answers and questions and thus make the learning relaxed and efficient. If you fail in the exam we will refund you immediately. All Microsoft Dynamics 365 Supply Chain Management Functional Consultant Expert exam torrent does a lot of help for you to pass the exam easily and successfully.

## Microsoft Dynamics 365 Supply Chain Management Functional Consultant Expert Sample Questions (Q135-Q140):

### NEW QUESTION # 135

A company uses a make-to-stock strategy for their key production components.

The number of active Kanban's for these components must be constant.

You need to configure a new Kanban rule.

How should you set up the Kanban type and replenishment strategy? To answer select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

### NEW QUESTION # 136

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company implements Dynamics 365 Supply Chain Management and configures the system to support process manufacturing. The company manufactures pain-relieving lotions. Several of the primary ingredients are delivered at different concentrations depending on the ingredient and vendor ingredient A is the primary active ingredient in the lotion. IngredientB is used as a compensating ingredient.

You need to ensure that the system is set up to support the manufacturing process.

Solution: Create a dimension-based product master with variants and use the trade agreements to specify the different pricing.

Does the solution meet the goal?

- A. No
- B. Yes

**Answer: A**

Explanation:

The solution does not meet the goal. Here is the explanation:

To ensure that the system is set up to support the process manufacturing of pain-relieving lotions, you should use the following steps1:

Create a product master for the lotion and release it to the relevant legal entities. On the Product dimension groups page, select Constraint-based configuration as the configuration technology, and select the configuration dimension. On the Released product details page, select Configurable on the Engineer tab.

Create a constraint-based product configuration model for the lotion and add it as a version to the product master. On the Constraint-based product configuration model details page, add attributes, constraints, subcomponents, BOM lines, and route operations to define the features and structure of the lotion. For example, you can add an attribute for ingredient A and specify its concentration as a value. You can also add constraints to limit the combinations of attribute values that are allowed.

Create a price model for the lotion and link it to the product configuration model. On the Price models page, add price components and specify how they are calculated based on attributes, subcomponents, BOM lines, or route operations. For example, you can add a price component for ingredient A and specify different prices for different concentrations.

Configure products on sales orders, sales quotations, purchase orders, or production orders by using the Product configuration models page. You can select values for attributes and see how they affect the price of the lotion. You can also view the price details and see how each price component contributes to the total price.

The solution in the question is not correct, because it does not involve constraint-based product configuration or price models.

Creating a dimension-based product master with variants and using trade agreements to specify different pricing would not allow you to handle different concentrations of ingredients or calculate prices based on attributes.

1: Product configuration overview : Create constraint-based configuration : Price models

### NEW QUESTION # 137

A customer produces light projection toys for holiday decorations throughout the year. The production process creates the projection toy at the following work cells: stands, main assembly, electric, visuals, and packaging.

You need to configure the subcontracted transfer activity.

What should you do?

- A. Set the transfer activity Freight by value to Carrier. Ensure that purchase agreements include the vendor ID of the vendor.

- B. Set the transfer activity Freight by value to Recipient. Ensure that purchase agreements include the vendor ID of the vendor.
- C. Set the transfer activity Freight by value to Shipper. Ensure that purchase agreements include the vendor ID of the vendor.
- D. Set the transfer activity Freight by value to Carrier. Ensure that purchase agreements include the vendor ID of the warehouse.
- E. Set the transfer activity Freight by value to Recipient. Ensure that purchase agreements include the vendor ID of the warehouse.
- F. Set the transfer activity Freight by value to Shipper. Ensure that purchase agreements include the vendor ID of the warehouse.

**Answer: B**

### NEW QUESTION # 138

You use the master planning module for Dynamics 365 Supply Chain Management.

Planned production orders have been created.

Several sales orders are canceled in response to concerns about recent online reviews of a product.

You need to enable the appropriate action message.

Which action message should you enable?

- A. Postpone
- B. Increase
- C. Derived actions.
- D. Decrease
- E. Advance

**Answer: D**

Explanation:

Explanation

The action message that you should enable is Decrease. Here is the explanation:

An action message is a system-generated suggestion to change an existing planned, approved, or firmed order. Action messages are generated by the master planning calculation in response to changed requirements<sup>1</sup>. For example, the ship date or quantity is changed on a sales order after you've already created a purchase order to fulfill the demand for that sales order. In this case, the master planning calculation generates one or more action messages that suggest that you update the purchase order. You decide whether to make the changes that are suggested.

The Decrease action message indicates that production orders, purchase orders, and other receipt transactions should be decreased to prevent excess inventory levels<sup>1</sup>. This action message is generated when there is less demand for a product than was previously planned. For example, if several sales orders are canceled, the master planning calculation will generate a Decrease action message for the corresponding planned production orders.

To enable the Decrease action message, you must select it on the Coverage groups page for the coverage group or item that you want the message to apply to<sup>1</sup>. You can also specify a decrease margin, which is the minimum percentage difference between the current quantity and the suggested quantity that will trigger a Decrease action message<sup>1</sup>.

### NEW QUESTION # 139

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A manufacturing plant uses Lean processes. You plan to outsource a painting operation to a subcontracting vendor. You create a service item named SP-01 to represent the painting service.

You need to create a subcontracting activity for the painting service.

Solution:

- \* Create a purchase agreement for the subcontracting vendor that contains the pricing information for SP-01.
- \* Create a vendor resource and a work cell for outsourced painting, then add the resource to the work cell.
- \* Create a production flow process activity using the painting work cell and the service item as the picking activity.
- \* Create a service term on the activity to tie the purchase agreement to the activity.

Does the solution meet the goal?

- A. Yes
- B. No

**Answer: A**

Explanation:

The solution meets the goal. Here is the explanation:

\* To create a subcontracting activity for the painting service, you should use the following steps1:

\* Create a purchase agreement for the subcontracting vendor that contains the pricing information for SP-01. This step is correct, because you need to create a purchase agreement that defines the terms and conditions for purchasing the subcontracting service from the vendor1. You also need to add a purchase agreement line for SP-01 and specify the quantity and price of the service.

\* Create a vendor resource and a work cell for outsourced painting, then add the resource to the

\* work cell. This step is correct, because you need to create a resource that is assigned to the vendor account and add it to a resource group that represents the subcontracting work cell1. This way, you can assign the subcontracting activity to the vendor resource.

\* Create a production flow process activity using the painting work cell and the service item as the picking activity. This step is correct, because you need to create a process activity that represents the subcontracting service in the production flow1. You also need to specify the painting workcell as the resource group and SP-01 as the product of the process activity. You also need to select the Generate license plate option on the mobile device menu item that is used for reporting as finished1.

\* Create a service term on the activity to tie the purchase agreement to the activity. This step is correct, because you need to create a service term that links the purchase agreement line to the production flow process activity1. A service term defines how a service item is consumed in production and how it is invoiced by the vendor.

1: Activity-based subcontracting
