

# Quiz 3V0-23.25 - Newest New Advanced VMware Cloud Foundation 9.0 Storage Test Pattern

Our 3V0-23.25 exam torrent is compiled by experts and approved by experienced professionals and updated according to the development situation in the theory and the practice. Our Advanced VMware Cloud Foundation 9.0 Storage guide torrent can simulate the exam and boosts the timing function. The language is easy to be understood and makes the learners have no learning obstacles. So our 3V0-23.25 Exam Torrent can help you pass the exam with high possibility.

The 3V0-23.25 exam question offer a variety of learning modes for users to choose from, which can be used for multiple clients of computers and mobile phones to study online, as well as to print and print data for offline consolidation. For any candidate, choosing the 3V0-23.25 question torrent material is the key to passing the exam. Our study materials can fully meet all your needs: Avoid wasting your time and improve your learning efficiency. Spending little hours per day within one week, you can pass the exam easily. You will don't take any risks and losses if you purchase and learn our 3V0-23.25 Latest Exam Dumps, do you?

## 100% Pass Quiz 2026 3V0-23.25: Advanced VMware Cloud Foundation 9.0 Storage Latest New Test Pattern

We are one of the largest and the most confessional dealer of 3V0-23.25 practice materials for we have been professional in this career for over ten years. And we have enough strenght on this filed. That is why our 3V0-23.25 actual exam outreaches others greatly among substantial suppliers of the exam. Getting place great orders with competitive prices and unquestionable quality for your information, the excellency of our 3V0-23.25 Exam Questions is obvious. Just come and buy them!

## VMware Advanced VMware Cloud Foundation 9.0 Storage Sample Questions (Q51-Q56):

### NEW QUESTION # 51

A Cloud Administrator is integrating a third-party Backup solution with a vVols-backed VCF cluster. The goal is to perform crash-consistent backups with minimal stun time for the production VMs. The storage team created an advanced array-side feature definition that is pushed to vCenter via the VASA Provider.

...

```
# SPBM Policy: "vVol-Backup-Optimized"
capabilities:
vvol:
array.snapshots: true
array.fast_clone: true
ruleSet:
IOPS_Limit: 50000
...
```

How do vVols, VASA, and SPBM integrate to fulfill this backup requirement during the daily backup window? (Select all that apply.)

- A. The array.fast\_clone capability allows the backup software to export the vVol data directly over the management network without mounting it to an ESXi host.
- B. When the backup software triggers a snapshot, vCenter uses VASA to instruct the physical array to create a hardware snapshot of the specific vVol, bypassing the ESXi storage stack entirely.
- C. Because vVols represent individual VMDKs on the array, the array can snapshot just the single VM's data, unlike VMFS where array snapshots must capture the entire 10 TB LUN containing dozens of VMs.
- D. The integration practically eliminates the "VM stun" period that occurs during snapshot consolidation in traditional VMFS datastores.

**Answer: B,C,D**

#### NEW QUESTION # 52

A Compliance Auditor is validating that a VCF Workload Domain meets the "Continuous Key Rotation" requirements of a strict financial standard (e.g., SOX/PCI).

The auditor examines the vCenter logs surrounding the Data-in-Transit (DiT) configuration.

...

[Log Analysis: vpxd.log]

2026-11-20T12:00:00Z INFO vpxd - [DiT] Rekey interval expired (1440 minutes).

2026-11-20T12:00:01Z INFO vpxd - [DiT] Ephemeral session keys successfully renegotiated between [esx-03] and [esx-05].

2026-11-20T12:00:02Z INFO vpxd - [DiT] Old key buffer purged.

...

How does the DiT key rotation architecture satisfy compliance without relying on external KMS administrators? (Select all that apply.)

- A. The default "Rekey Interval" for DiT is 1440 minutes (24 hours). The ESXi hosts automatically perform a new Diffie-Hellman handshake every day to create a completely new session key, making brute-force decryption of historical traffic impossible.
- B. Key rotation occurs instantly at the packet layer; the DOM Client creates a new key for every single 4KB block written.
- C. The ESXi hosts must temporarily pause cluster write operations (Congestion) for 30 seconds to synchronize the new symmetric keys.
- D. DiT keys are automatically persisted to the vCenter database as backup material before deletion, ensuring forensic accountability.
- E. The RekeyInterval can be aggressively modified via API (e.g., to 60 minutes) to meet stricter compliance rules, without causing any disruption to the active storage traffic.

**Answer: A,E**

#### NEW QUESTION # 53

Which vSAN feature ensures data availability across sites?

- A. Stretched Cluster
- B. Snapshot
- C. Clone
- D. RAID 0

**Answer: A**

#### NEW QUESTION # 54

An architect is designing a vSAN storage solution for a remote site. The following requirements have been given:

- \* There is enough rack space for two hosts, each with 36 CPU cores and 256 GB of RAM.
- \* The physical network at the remote site supports 10 Gb maximum.
- \* The network connecting the remote site to corporate has 10 Gb of bandwidth with an average RTT of 25 ms.
- \* High availability is expected for all the Virtual Machines running at the remote site.
- \* The solution must provide additional storage to 16 graphic design Windows based workstations.
- \* Active Directory is configured and available at the remote site.

\* The graphic design application requires native NTFS permissions.  
 What vSAN advanced technology is required for configuring this remote site?

- A. vSAN File Share SMB services
- B. vSAN Storage Cluster
- C. vSAN File Share NFSv3 services
- D. vSAN HCI Mesh

**Answer: A**

Explanation:

vSAN File Share SMB services are required because the storage must be consumed by Windows workstations and the application requires native NTFS permissions. SMB is the Windows-native file sharing protocol and integrates with Active Directory authentication. vSAN File Service supports SMB file shares, and Windows clients joined to the Active Directory domain configured with vSAN File Service can access those shares by using the SMB path. vSAN File Service also supports Microsoft Management Console for SMB shares, including Access Control List management, open file viewing, active sessions, and client connection management. These capabilities align directly with NTFS-style permission expectations for Windows-based graphic design workstations. vSAN File Service also supports two-node vSAN configurations, which matches the remote-site rack-space constraint of two hosts with a witness deployed remotely or in a shared location. NFSv3 does not provide native NTFS permissions for Windows clients. vSAN Storage Cluster and vSAN HCI Mesh address remote datastore capacity sharing, not SMB file access for Windows users. Reference topics: vSAN File Service, SMB File Shares, Active Directory Integration, Two-Node vSAN Support.

**NEW QUESTION # 55**

Match each vSAN storage attribute with its correct description.

Attribute	Description
vSAN HCI Cluster	A vSAN Cluster topology that extends a single logical vSAN cluster across two availability zones. A vSAN stretch cluster can tolerate a site failure.
vSAN Storage Cluster	A vSphere cluster that does not have local vSAN storage, but instead, it mounts a remote vSAN datastore.
vSAN Compute Cluster	A vSAN cluster that provides disaggregated storage for vSAN and vSphere clusters.
vSAN Stretched Cluster	A cluster that provides both compute and storage to Virtual Machines.

**Answer:**

Explanation:

Attribute	Description
vSAN HCI Cluster	A cluster that provides both compute and storage to Virtual Machines.
vSAN Storage Cluster	A vSAN cluster that provides disaggregated storage for vSAN and vSphere clusters.
vSAN Compute Cluster	A vSphere cluster that does not have local vSAN storage, but instead, it mounts a remote vSAN datastore.
vSAN Stretched Cluster	A vSAN Cluster topology that extends a single logical vSAN cluster across two availability zones. A vSAN stretch cluster can tolerate a site failure.

Explanation:

vSAN HCI Cluster = A cluster that provides both compute and storage to Virtual Machines; vSAN Storage Cluster = A vSAN cluster that provides disaggregated storage for vSAN and vSphere clusters; vSAN Compute Cluster = A vSphere cluster that does not have local vSAN storage, but instead, it mounts a remote vSAN datastore; vSAN Stretched Cluster = A vSAN Cluster topology that extends a single logical vSAN cluster across two availability zones. A vSAN stretched cluster can tolerate a site failure.

These mappings describe the primary vSAN storage models used in VMware Cloud Foundation 9.0. A vSAN HCI Cluster is the traditional hyperconverged model where the same cluster provides compute resources and contributes local storage devices to the vSAN datastore for running virtual machines. A vSAN Storage Cluster is a disaggregated storage model based on vSAN ESA; it provides storage capacity and performance to other vSAN or vSphere clusters instead of primarily running workloads itself. A

vSAN Compute Cluster is a vSphere cluster that does not contribute local vSAN capacity. Instead, it consumes a remote datastore exported by a vSAN Storage Cluster, enabling compute and storage to scale separately. A vSAN Stretched Cluster extends a single logical vSAN cluster across two availability zones or sites and uses a witness to maintain quorum, allowing workloads to tolerate a full site failure. These distinctions are essential for choosing between HCI, disaggregated storage, remote storage consumption, and availability-zone resilience. Reference topics: vSAN HCI Cluster, vSAN Storage Cluster, vSAN Compute Cluster, vSAN Stretched Cluster, VCF Storage Models.

## NEW QUESTION # 56
