Training 350-701 Material | 350-701 Practice Test Online

To maximize your chances of your success in the 350-701 Certification Exam, our company introduces you to an innovatively created exam testing tool-our 350-701 exam questions. Not only that you will find that our 350-701 study braindumps are full of the useful information in the real exam, but also you will find that they have the function to measure your level of exam preparation and cover up your deficiency before appearing in the actual exam.

Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q314-Q319):

NEW QUESTION # 314
Which Cisco AMP file disposition valid?

- A. pristine
- B. dirty

- C. malware
- D. non malicious

Answer: C

NEW QUESTION # 315
What is a benefit of using Cisco Tetration?

- A. It collects telemetry data from servers and then uses software sensors to analyze flow information.
- B. It collects policy compliance data and process details.
- C. It collects enforcement data from servers and collects interpacket variation.
- D. It collects near-real time data from servers and inventories the software packages that exist on servers.

Answer: A

Explanation:
Cisco Tetration is a hybrid-cloud workload protection platform that secures compute instances in both the on-premises data center and the public cloud1. One of the benefits of using Cisco Tetration is that it collects telemetry data from servers and then uses software sensors to analyze flow information2. This allows Cisco Tetration to provide comprehensive visibility into every workload interaction and powerful AI/ML driven automation2. By analyzing the flow information, Cisco Tetration can also generate microsegmentation policies, detect workload behavior anomalies, identify software vulnerabilities, and monitor policy compliance23.

NEW QUESTION # 316
Which method is used to deploy certificates and configure the supplicant on mobile devices to gain access to network resources?

- A. MAC authentication bypass
- B. Simple Certificate Enrollment Protocol
- C. BYOD on boarding
- D. Client provisioning

Answer: C

Explanation:
When supporting personal devices on a corporate network, you must protect network services and enterprise data by authenticating and authorizing users (employees, contractors, and guests) and their devices. Cisco ISE provides the tools you need to allow employees to securely use personal devices on a corporate network.
Guests can add their personal devices to the network by running the native supplicant provisioning (Network Setup Assistant), or by adding their devices to the My Devices portal.
Because native supplicant profiles are not available for all devices, users can use the My Devices portal to add these devices manually; or you can configure Bring Your Own Device (BYOD) rules to register these devices.
When supporting personal devices on a corporate network, you must protect network services and enterprise data by authenticating and authorizing users (employees, contractors, and guests) and their devices.
