Explanation/Reference:

max_concurrent_jobs	Maximum number of concurrent jobs for the entire system. The default setting is 250. This setting is correct for a base (2x7) multi-node Avamar system. It is derived by multiplying the maximum number of jobs allowed per node (typically 20, as defined by max_jobs_per_node) by the number of storage nodes in each module (there are seven storage nodes in a base multi-node Avamar system).
max_jobs_per_node	Maximum number of concurrent jobs that a single storage node is allowed to process. The default setting is 80 jobs per node.
