

# Pass Guaranteed Quiz Databricks - Databricks-Certified-Data-Analyst-Associate—Reliable Latest Dumps Free

What's more, part of that 2Pass4sure Databricks-Certified-Data-Analyst-Associate dumps now are free:  
<https://drive.google.com/open?id=1AlcXnfpwmjYZVStX6trZDOfTgwQT6ad>

IT elite team of our 2Pass4sure make a great effort to provide large numbers of examinees with the latest version of Databricks's Databricks-Certified-Data-Analyst-Associate exam training materials, and to improve the accuracy of Databricks-Certified-Data-Analyst-Associate exam dumps. Choosing 2Pass4sure, you can make only half efforts of others to pass the same Databricks-Certified-Data-Analyst-Associate Certification Exam. What's more, after you purchase Databricks-Certified-Data-Analyst-Associate exam training materials, we will provide free renewal service as long as one year.

## Databricks Databricks-Certified-Data-Analyst-Associate Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Analytics applications: It describes key moments of statistical distributions, data enhancement, and the blending of data between two source applications. Moreover, the topic also explains last-mile ETL, a scenario in which data blending would be beneficial, key statistical measures, descriptive statistics, and discrete and continuous statistics.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>SQL in the Lakehouse: It identifies a query that retrieves data from the database, the output of a SELECT query, a benefit of having ANSI SQL, access, and clean silver-level data. It also compares and contrasts MERGE INTO, INSERT TABLE, and COPY INTO. Lastly, this topic focuses on creating and applying UDFs in common scaling scenarios.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Databricks SQL: This topic discusses key and side audiences, users, Databricks SQL benefits, complementing a basic Databricks SQL query, schema browser, Databricks SQL dashboards, and the purpose of Databricks SQL endpoints</li><li>warehouses. Furthermore, the delves into Serverless Databricks SQL endpoint</li><li>warehouses, trade-off between cluster size and cost for Databricks SQL endpoints</li><li>warehouses, and Partner Connect. Lastly it discusses small-file upload, connecting Databricks SQL to visualization tools, the medallion architecture, the gold layer, and the benefits of working with streaming data.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Data Management: The topic describes Delta Lake as a tool for managing data files, Delta Lake manages table metadata, benefits of Delta Lake within the Lakehouse, tables on Databricks, a table owner's responsibilities, and the persistence of data. It also identifies management of a table, usage of Data Explorer by a table owner, and organization-specific considerations of PII data. Lastly, the topic it explains how the LOCATION keyword changes, usage of Data Explorer to secure data.</li></ul>

Topic 5	<ul style="list-style-type: none"> <li>• Data Visualization and Dashboarding: Sub-topics of this topic are about of describing how notifications are sent, how to configure and troubleshoot a basic alert, how to configure a refresh schedule, the pros and cons of sharing dashboards, how query parameters change the output, and how to change the colors of all of the visualizations. It also discusses customized data visualizations, visualization formatting, Query Based Dropdown List, and the method for sharing a dashboard.</li> </ul>

## **Study Databricks-Certified-Data-Analyst-Associate Materials & New Databricks-Certified-Data-Analyst-Associate Dumps Free**

We have compiled the Databricks-Certified-Data-Analyst-Associate test guide for these candidates who are trouble in this exam, in order help they pass it easily, and we deeply believe that our Databricks-Certified-Data-Analyst-Associate exam questions can help you solve your problem. Believe it or not, if you buy our study materials and take it seriously consideration, we can promise that you will easily get the certification that you have always dreamed of. We believe that you will never regret to buy and practice our Databricks-Certified-Data-Analyst-Associate latest question.

### **Databricks Certified Data Analyst Associate Exam Sample Questions (Q46-Q51):**

#### **NEW QUESTION # 46**

Which of the following benefits of using Databricks SQL is provided by Data Explorer?

- A. It can be used to run UPDATE queries to update any tables in a database.
- B. It can be used to make visualizations that can be shared with stakeholders.
- C. It can be used to connect to third party BI tools.
- D. It can be used to produce dashboards that allow data exploration.
- E. **It can be used to view metadata and data, as well as view/change permissions.**

**Answer: E**

Explanation:

Data Explorer is a user interface that allows you to discover and manage data, schemas, tables, models, and permissions in Databricks SQL. You can use Data Explorer to view schema details, preview sample data, and see table and model details and properties. Administrators can view and change owners, and admins and data object owners can grant and revoke permissions.<sup>1</sup>. Reference: Discover and manage data using Data Explorer

#### **NEW QUESTION # 47**

What describes the variance of a set of values?

- A. Variance is a measure of central tendency of a set of values.
- B. Variance is a measure of how far an observed value is from the variable's maximum or minimum value.
- C. **Variance is a measure of how far a set of values is spread out from the set's central value.**
- D. Variance is a measure of how far a single observed value is from a set of values

**Answer: C**

Explanation:

Variance is a statistical measure that quantifies the dispersion or spread of a set of values around their mean (central value). It is calculated by taking the average of the squared differences between each value and the mean of the dataset. A higher variance indicates that the data points are more spread out from the mean, while a lower variance suggests that they are closer to the mean. This measure is fundamental in statistics to understand the degree of variability within a dataset. Wikipedia<sup>1</sup> Investopedia<sup>1</sup>

## NEW QUESTION # 48

What is a benefit of using Databricks SQL for business intelligence (BI) analytics projects instead of using third-party BI tools?

- A. Advanced dashboarding capabilities
- B. Computations, data, and analytical tools on the same platform
- C. Simultaneous multi-user support
- D. Automated alerting systems

**Answer: B**

Explanation:

Databricks SQL offers a unified platform where computations, data storage, and analytical tools coexist seamlessly. This integration allows business intelligence (BI) analytics projects to be executed more efficiently, as users can perform data processing and analysis without the need to transfer data between disparate systems. By consolidating these components, Databricks SQL streamlines workflows, reduces latency, and enhances data governance. While third-party BI tools may offer advanced dashboarding capabilities, simultaneous multi-user support, and automated alerting systems, they often require integration with separate data processing platforms, which can introduce complexity and potential inefficiencies.

## NEW QUESTION # 49

A data engineering team has created a Structured Streaming pipeline that processes data in micro-batches and populates gold-level tables. The microbatches are triggered every minute.

A data analyst has created a dashboard based on this gold-level data

a. The project stakeholders want to see the results in the dashboard updated within one minute or less of new data becoming available within the gold-level tables.

Which of the following cautions should the data analyst share prior to setting up the dashboard to complete this task?

- A. The dashboard cannot be refreshed that quickly
- B. The streaming data is not an appropriate data source for a dashboard
- C. The required compute resources could be costly
- D. The streaming cluster is not fault tolerant
- E. The gold-level tables are not appropriately clean for business reporting

**Answer: C**

Explanation:

A Structured Streaming pipeline that processes data in micro-batches and populates gold-level tables every minute requires a high level of compute resources to handle the frequent data ingestion, processing, and writing. This could result in a significant cost for the organization, especially if the data volume and velocity are large. Therefore, the data analyst should share this caution with the project stakeholders before setting up the dashboard and evaluate the trade-offs between the desired refresh rate and the available budget. The other options are not valid cautions because:

B . The gold-level tables are assumed to be appropriately clean for business reporting, as they are the final output of the data engineering pipeline. If the data quality is not satisfactory, the issue should be addressed at the source or silver level, not at the gold level.

C . The streaming data is an appropriate data source for a dashboard, as it can provide near real-time insights and analytics for the business users. Structured Streaming supports various sources and sinks for streaming data, including Delta Lake, which can enable both batch and streaming queries on the same data.

D . The streaming cluster is fault tolerant, as Structured Streaming provides end-to-end exactly-once fault-tolerance guarantees through checkpointing and write-ahead logs. If a query fails, it can be restarted from the last checkpoint and resume processing.

E . The dashboard can be refreshed within one minute or less of new data becoming available in the gold-level tables, as Structured Streaming can trigger micro-batches as fast as possible (every few seconds) and update the results incrementally. However, this may not be necessary or optimal for the business use case, as it could cause frequent changes in the dashboard and consume more resources. Reference: Streaming on Databricks, Monitoring Structured Streaming queries on Databricks, A look at the new Structured Streaming UI in Apache Spark 3.0, Run your first Structured Streaming workload

## NEW QUESTION # 50

A data team has been given a series of projects by a consultant that need to be implemented in the Databricks Lakehouse Platform. Which of the following projects should be completed in Databricks SQL?

- A. Combining two data sources into a single, comprehensive dataset

- B. Tracking usage of feature variables for machine learning projects
- C. Testing the quality of data as it is imported from a source
- D. Segmenting customers into like groups using a clustering algorithm
- E. Automating complex notebook-based workflows with multiple tasks

**Answer: A**

**Explanation:**

Databricks SQL is a service that allows users to query data in the lakehouse using SQL and create visualizations and dashboards<sup>1</sup>. One of the common use cases for Databricks SQL is to combine data from different sources and formats into a single, comprehensive dataset that can be used for further analysis or reporting<sup>2</sup>. For example, a data analyst can use Databricks SQL to join data from a CSV file and a Parquet file, or from a Delta table and a JDBC table, and create a new table or view that contains the combined data<sup>3</sup>. This can help simplify the data management and governance, as well as improve the data quality and consistency. Reference:
