100% CORRECT SPRING FALL-  
2022/2023 LATEST RATED GRADE A+**

To promote effective grieving in a 6-year-old sibling following the death of an infant, the nurse should:

- A) Recommend that the sibling not attend the infant's memorial service
- B) Encourage the parents to minimize their expression of grief with the sibling
- C) Explain to the sibling that the infant went to heaven
- D) Explain to the sibling that thoughts and wishes did not cause the infant's death - Answer: D) Explain to the sibling that thoughts and wishes did not cause the infant's death: At age 6, children may take words literally and because of their egocentrism, they believe that thoughts are all-powerful. They may truly believe they caused the death of their sibling. A simple, honest explanation of why the sibling died is indicated. This intervention is consistent with Caring Processes.
- A) Recommend that the sibling not attend the infant's memorial service: This intervention is not a solution to the problem and will not promote effective grieving for the sibling. It is not consistent with Caring Processes.
- B) Encourage the parents to minimize their expression of grief with the sibling: This intervention will lead to ineffective grieving for the sibling and is not consistent with Caring Processes
- C) Explain to the sibling that the infant went to heaven: This intervention will not address the sibling's problem

A 5-year-old with a history of congenital hydrocephalus and VP shunt placement at four weeks of age is admitted with increased somnolence, decreased appetite, and increased complaints of headache. This morning the child vomited twice. The nurse should anticipate:

- A) The physician ordering lumbar puncture and blood and urine cultures
- B) the patient having a CT scan followed by possible shunt revision
- C) Administering mannitol or hypertonic saline
- D) Administering phenytoin (Dilantin) or fosphenytoin (Cerebyx) - Answer: B) The patient having a CT scan followed by possible shunt revision: This patient is demonstrating signs of increased intracranial pressure. The most likely etiology is malfunction of the VP shunt as a result of blockage or disconnection, which is particularly likely over time as the child grows. The definitive diagnosis is made by a CT scan and a shunt series. Surgical intervention for a shunt revision would be indicated.
- A) The physician ordering lumbar puncture and blood and urine cultures: These interventions will not address the most likely primary problem, which is suspected VP

The American Association of Critical-Care Nurses (AACN) Certified Critical Care Registered Nurse-Pediatric (CCRN-P) certification exam is designed to validate the specialized knowledge and skills required for registered nurses who care for critically ill

pediatric patients. Critical Care Nursing Exam certification is recognized as the gold standard for excellence in pediatric critical care nursing, and it demonstrates a nurse's commitment to providing safe, effective care to critically ill children.

## **AACN Critical Care Nursing Exam Sample Questions (Q13-Q18):**

### **NEW QUESTION # 13**

A pediatric client was returned to the unit after a heart surgery. Contraptions are: Left chest tube drainage attached to a bottle system; an IVF of D5 NSS at 32 gts/min; and an NGT to gravity. The client was then attached to a cardiac monitor. What would be the priority nursing intervention:

- A. measure the drainage of both tubing.
- **B. obtain vital signs**
- C. check the IVF level and flow rate
- D. check the identification bracelet

**Answer: B**

Explanation:

Explanation: Vital signs should be the priority to determine the child's status and compare it with the data obtained during the pre-operative period.

### **NEW QUESTION # 14**

A child possibly has pinworm infestation because he reported that he first felt:

- A. maculopapular rash
- B. loose bowel movement
- **C. anal itching**
- D. scaly skin patches

**Answer: C**

Explanation:

Explanation: With enterobiasis, the adult worm lays her eggs around the anal opening, producing an irritation and thus an itch.

### **NEW QUESTION # 15**

Immunization is very important to prevent certain disease. Daniel, a 5 and a half month-old infant should already receive:

- A. first booster of DTaP vaccine
- **B. two doses of DTaP vaccine**
- C. measles, mumps and rubella vaccine
- D. booster of IPV

**Answer: B**

Explanation:

Explanation: Schedule is 3 doses of DTaP at 2 month intervals starting at 2 months of age. Fourth dose of IPV should be given at 4-6 years old. MMR vaccine is given at 12-15 months of age. First booster of DTP is at 15-18 months of age.

### **NEW QUESTION # 16**

When preparing a 2-month-old with hypoplastic left heart syndrome for a cardiac transplant, which of the following findings is most alarming?

- A. BP of 72/48
- B. O<sub>2</sub> saturation of 75%
- **C. Temperature of 102.2° F (39° C)**
- D. Increased RV pressure

**Answer: C**

#### Explanation:

While patients with hypoplastic left heart syndrome (HLHS) typically have lower baseline oxygen saturations due to mixing of systemic and pulmonary blood flow, fever in this population is especially concerning due to their immunocompromised and pre-transplant status. Fever may signal infection or sepsis, both of which can jeopardize transplant eligibility and lead to rapid decompensation.

"In patients awaiting heart transplantation, fever is a red flag for infection or systemic inflammatory response, both of which significantly increase mortality risk and complicate transplant candidacy. Prompt evaluation is required." (Referenced from CCRN Pediatric - Direct Care: Cardiovascular, Pre-Transplant Management)

#### NEW QUESTION # 17

A 15-year-old girl was recently diagnosed of idiopathic scoliosis. She is worried about being different from her friends and upset about the treatment regimen. How would the nurse help her to develop a positive self-image:

- A. assist her in selecting clothes to improve her appearance
- B. remind her that her back would be crooked if she doesn't adhere to the treatment
- C. be focus on her positive rather her negative attributes
- D. refer her to a psychiatrist for consult.

#### Answer: A

#### Explanation:

Explanation: The nurse would help her by selecting appropriate clothing that will help minimize the appearance of a brace, especially if an effort is made to wear the current style.

#### NEW QUESTION # 18
