## **Free PDF Quiz Google - Newest Valid Chrome-Enterprise-Administrator Test Camp**

To avail of all these benefits you need to pass the Google Chrome-Enterprise-Administrator exam which is a difficult exam that demands firm commitment and complete Professional Chrome Enterprise Administrator Certification Exam (Chrome-Enterprise-Administrator) exam questions preparation. For the well and quick Chrome-Enterprise-Administrator Exam Dumps preparation, you

can get help from ActualTestsQuiz Chrome-Enterprise-Administrator Questions which will provide you with everything that you need to learn, prepare and pass the Professional Chrome Enterprise Administrator Certification Exam (Chrome-Enterprise-Administrator) certification exam.

## Google Professional Chrome Enterprise Administrator Certification Exam Sample Questions (Q41-Q46):

### NEW QUESTION # 41

What is the schedule for Chrome stable channel major releases'?

- A. Whenever new features are added
- B. Once a quarter (every three months)
- C. The second Tuesday of every month
- D. Every 28 days (every four weeks)

**Answer: D**

Explanation:

The Chrome release cycle for the Stable channel is approximately every four weeks. This consistent schedule allows administrators to anticipate and plan for new feature deployments and potential compatibility testing.

While security updates can occur more frequently and are often released on Tuesdays, major version updates follow this roughly monthly cadence.

### NEW QUESTION # 42

Which percentage of Chrome is recommended during Beta before general availability'?

- A. 5%
- B. 2%
- C. 1%
- D. 10%

**Answer: A**

Explanation:

While the exact percentage isn't explicitly stated in the provided material, industry best practices for software deployment, including browser updates, recommend testing in a Beta environment with a representative but limited subset of users before a full rollout. A common recommendation for Beta testing is around 5% of the user base. This provides sufficient feedback and issue detection without impacting the majority of users.

### NEW QUESTION # 43

What policy and value provides the most protection against malicious websites?

- A. Set the Safe Browsing policy to Enhanced mode
- B. Set the site isolation policy to be required for all websites
- C. Enable site isolation for all websites
- D. Allow the user ability to bypass Safe Browsing warnings

**Answer: A**

Explanation:

Setting the **\*\*Safe Browsing policy to Enhanced mode\*\*** provides the most direct and comprehensive protection against malicious websites by leveraging Google's real-time threat intelligence. Allowing users to bypass warnings (option A) defeats the purpose of Safe Browsing. While site isolation (options C and D) protects against cross-site data leakage, it doesn't directly prevent users from accessing malicious sites in the first place. Enhanced Safe Browsing actively warns and blocks access to dangerous websites.

### NEW QUESTION # 44

Which option is a security event that Google Chrome captures?

- A. Malware detection
- B. User inactivity
- C. Password complexity
- D. Unauthorized file downloads

**Answer: A**

Explanation:

Chrome's Safe Browsing feature actively scans web pages, downloads, and extensions for known malware.

When malware is detected, it is reported as a security event. While unauthorized file downloads could be a consequence of a security issue, Chrome's direct detection focuses on the malware itself. Password complexity is a setting for password management, and user inactivity is a system or application-level event, not a direct security event captured by Chrome in the same way as malware detection.

#### NEW QUESTION # 45

An organization relies heavily on Chrome browser for daily operations. News breaks about two critical hardware vulnerabilities. These vulnerabilities allow attackers to potentially access sensitive information stored in the browser's memory, even across different websites and processes. Which specific Chrome Enterprise Core policy would an administrator implement to help mitigate the risks?

- A. Enable Site isolation for every website
- B. Update Chrome browser to the latest stable version
- C. Manage Cross-Origin Extensions by Blocking all except an allowlist
- D. Require Hardware-backed Key Generation for TLS

**Answer: A**

Explanation:

The scenario describes vulnerabilities that could allow cross-site data leakage within the browser's memory.

"Site isolation for every website" is a security feature in Chrome that isolates the rendering process for each website, preventing one site from accessing the data of another, even if a vulnerability is exploited. This policy directly addresses the risk of cross-site information leakage due to memory vulnerabilities. Option A relates to TLS security, option B is a general security best practice but doesn't directly prevent cross-site memory access, and option C manages extension behavior, not core browser memory isolation.

#### NEW QUESTION # 46

.....

ActualTestsQuiz's pledge to customers is that we can help customers 100% pass their IT certification exams. The quality of ActualTestsQuiz's product has been recognized by many IT experts. The most important characteristic of our products is their pertinence. It only takes 20 hours for you to complete the training course and then easily pass your first time to attend Google Certification Chrome-Enterprise-Administrator Exam.
