

New JN0-253 Real Test, JN0-253 Valid Exam Camp

BTW, DOWNLOAD part of Lead2PassExam JN0-253 dumps from Cloud Storage: https://drive.google.com/open?id=1Ja7MBhuqJbjkwXj2iOPkuKXM_aTO8sp

The second format is web-based JN0-253 practice exam and can be accessed through browsers and candidates can take it online. The students don't need to install or use any plugins or software to attempt the web-based practice exam. The third and last form is the Juniper JN0-253 desktop practice test software that can be used from Windows computers. Candidates that have Windows laptops or computers can take the JN0-253 practice exam efficiently.

Juniper JN0-253 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Juniper Mist Cloud Operations: This domain covers three API types (RESTful, WebSocket, Webhook) for programmatic integration, plus support resources including ticketing systems and documentation.
Topic 2	<ul style="list-style-type: none">Juniper Mist Configuration Basics: This domain addresses initial setup including user accounts, device onboarding, organizational structures, subscription licensing, certificate management, and automated provisioning with labels and policies.
Topic 3	<ul style="list-style-type: none">Juniper Mist Monitoring and Analytics: This domain focuses on monitoring tools including service-level expectations, packet captures, AI-driven insights, automated alerts, and audit logs for comprehensive network visibility.

JN0-253 Valid Exam Camp, JN0-253 Valid Test Tips

They can try a free demo for satisfaction before buying our Juniper JN0-253 dumps. And a 24/7 support system assists them whenever they are stuck in any problem or issue. This Mist AI, Associate (JNCIA-MistAI) (JN0-253) questions is a complete package and a blessing for candidates who want to prepare quickly for the JN0-253 exam. Buy It Now!

Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q85-Q90):

NEW QUESTION # 85

Which two statements are true about packet captures on an AP? (Choose two.)

- A. The involved APs are taken out of service.
- B. **Wireless and wired packets can be captured.**
- C. **The involved APs remain in service.**
- D. Only wireless packets can be captured.

Answer: B,C

Explanation:

Mist APs have the capability to capture both wireless and wired packets. This feature allows for comprehensive network troubleshooting by providing visibility into both types of traffic. When performing packet captures on Mist APs, the APs remain in service. This means they continue to operate and serve clients while the capture is ongoing, ensuring minimal disruption to network operations.

This functionality is critical for maintaining network availability and performance while conducting detailed packet analysis.

NEW QUESTION # 86

In the Latest Updates section of Marvis Actions, an issue might be classified as one of which three states? (Choose three.)

- A. Resolved
- B. Intermittent Issue
- C. Reoccurring Issue
- D. AI Validated
- E. Active

Answer: A,C,D

NEW QUESTION # 87

Which Juniper Mist feature tracks the location of important devices and objects within a building?

- A. User Engagement
- B. Asset Visibility
- C. Wireless Assurance
- D. IoT Assurance

Answer: B

Explanation:

The Juniper Mist Asset Visibility service provides real-time tracking and visibility for important devices and objects within indoor environments such as hospitals, offices, or warehouses. It uses Bluetooth Low Energy (BLE) technology and Mist vBLE-enabled access points to determine the precise location of tagged assets.

According to the Juniper Mist Location Services Guide, the feature is defined as:

"Asset Visibility leverages virtual Bluetooth LE technology and BLE tags to locate and track assets on floor plans in real time, providing actionable location-based intelligence." Key functionalities include:

- * Tracking BLE-tagged assets such as medical equipment, IT devices, or inventory.
- * Displaying live location information on floor maps.
- * Integrating with external asset management or workflow systems.

While User Engagement focuses on customer-facing location experiences (e.g., navigation or proximity marketing), Asset Visibility is designed specifically for internal asset monitoring and operational efficiency.

Therefore, the correct answer is C. Asset Visibility.

NEW QUESTION # 88

You are asked to create a dedicated guest WLAN which will only be available on the lobby access point (AP) at your office site. How would you accomplish this task in Juniper Mist?

- A. Create a new WLAN called "Guest" in the existing WLAN template assigned to the office site.
- B. Create a new WLAN template called "Guest" and assign it to the office site.
- C. Create a new "Guest" WLAN template and add it to the lobby AP using a device profile.
- D. Apply a "Guest" organization label to the lobby AP.

Answer: C

Explanation:

Comprehensive and Detailed Explanation verified by Juniper Mist documentation:

To ensure a guest WLAN is available only on a specific lobby AP, the correct approach according to Juniper Mist best practices is

to create a new "Guest" WLAN template and add it to the lobby AP using a device profile. This method leverages device profiles for targeted SSID airtime availability, allowing granular WLAN assignment to selected APs (not all APs or sites). Juniper's documentation and solution briefs confirm that device profiles control which SSIDs broadcast on specific access points within a site, supporting scenarios like dedicated guest access only in particular areas such as the lobby.

Creating WLANs in standard templates enables SSID broadcast across all assigned APs, not selectively per device. Organization labels do not restrict SSID broadcast for individual APs.

Verification:

Your selected answer in the image ("Create a new 'Guest' WLAN template and add it to the lobby AP using a device profile") is correct and aligns with Juniper's recommended workflow.

NEW QUESTION # 89

Using Juniper Mist, you want to claim multiple access points (APs) using a Web browser.

Where in the Juniper Mist Portal would you accomplish this task?

- A. Inventory
- B. Client Onboarding
- C. Subscriptions
- D. Devices

Answer: A

Explanation:

In Juniper Mist, all hardware device onboarding and claiming operations—including access points (APs), switches, and gateways—are performed under the Inventory section of the Mist Cloud Portal.

According to the Juniper Mist Cloud documentation, the Inventory page serves as the centralized location for device lifecycle management. It allows administrators to:

- * Claim new devices using their serial numbers or activation codes.
- * Batch import multiple APs via manual entry or CSV upload.
- * Assign claimed devices to specific sites for configuration and management.
- * Monitor device claim status, model type, firmware version, and cloud connectivity state.

The documentation specifies:

"To onboard or claim multiple access points in the Mist Cloud, navigate to Organization # Inventory, then click Claim Devices. Enter or paste serial numbers of the APs you want to add, and assign them to the appropriate site." Other options are incorrect because:

- * Subscriptions manages licensing and service entitlements.
- * Devices shows active device status per site but does not handle claiming.
- * Client Onboarding is used for guest access or authentication workflows, not hardware management.

Therefore, the correct answer is Inventory (C).

NEW QUESTION # 90

.....

It is a truism that an internationally recognized JN0-253 certification can totally mean you have a good command of the knowledge in certain areas. If you are overwhelmed by workload heavily and cannot take a breath from it, why not choose our JN0-253 preparation torrent? We are specialized in providing our customers with the most reliable and accurate exam materials and help them pass their exams by achieving their satisfied scores. With our JN0-253 practice materials, your exam will be a piece of cake.
