ValidDumps provide different training tools and resources to prepare for the Google Associate-Cloud-Engineer Exam. The preparation guide includes courses, practice test, test engine and part free PDF download.

The superb Associate-Cloud-Engineer practice braindumps have been prepared extracting content from the most reliable and authentic exam study sources by our professional experts. As long as you have a look at them, you will find that there is no question of inaccuracy and outdated information in them. And our Associate-Cloud-Engineer Study Materials are the exact exam questions and answers you will need to pass the exam. What is more, you will find that we always update our Associate-Cloud-Engineer exam questions to the latest.

Pass Guaranteed Quiz 2026 Associate-Cloud-Engineer: Google Associate Cloud Engineer Exam – Trustable Valid Test Vce Free

In today's technological world, more and more students are taking the Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) exam online. While this can be a convenient way to take a Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) exam dumps, it can also be stressful. Luckily, ValidDumps's best Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) exam questions can help you prepare for your Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) certification exam and reduce your stress. If you are preparing for the Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) exam dumps our Associate-Cloud-Engineer Questions help you to get high scores in your Associate-Cloud-Engineer exam.

How can you get ready for Associate Cloud Engineer Certification Exam

There is a study guide for Associate Cloud Engineer Certification Exam

Here is our instant guide if you don't have time to read all the page

This exam is well recognized as Associate Cloud Engineer, like all examinations, Google has some freedom to examine a variety of topics. This means that most of the contents of Associate Cloud Engineer are necessary as they perform random tests on the many available topics. Also keep in mind that experience conditions often exist because they observed the average person and what is needed. You can always go further to succeed with the Associate Cloud Engineer, but it can take some extra effort. The exam objectives are strange for each exam and are usually provided by the certification provider. These normally indicate to the candidate which subjects are relevant, what he should know and why the exam tries to cover these subjects. It is necessary to find them out for your precise exam. This can be found on almost all provider websites and reports a lot like studies. Staying focused on studying can be difficult, but take it in mind that the best jobs in the world are only several tests away. Regardless of whether you enter cybersecurity or do a basic level technical job, certification is a clear, learning and rewarding path for careers that pay a LOT of money. They offer a better balance between professional and private life and can get in touch with some of the leaders in the business world. The Google Associate Cloud Engineer certification exam is of paramount importance both in professional life and in the Google certification process. With Google certification, you can easily get a good job in the market and move towards success. Specialists who have successfully finished the Google Associate Cloud Engineer exam preparation are the absolute favorites in the industry. You will pass the Google Associate Cloud Engineer certification exam and have career chances. In this advanced age, getting an excellent Google certification exam has become more necessary for Google specialists. If we examine the world of IT credentials, we will find many certified exams, but the truth is that Google Associate Cloud Engineer certification is above all the credentials available in the IT profession. The Google certification is one of the best ways to increase value in the IT world. You want to know why? The Associate Cloud Engineer exam module was recently presented by Google and has attracted the attention of many Google ACE professionals and aspiring people who wish to increase their credibility in the market.

Google Associate Cloud Engineer Exam Sample Questions (Q179-Q184):

NEW QUESTION # 179

You have an application running in Google Kubernetes Engine (GKE) with cluster autoscaling enabled. The application exposes a TCP endpoint. There are several replicas of this application. You have a Compute Engine instance in the same region, but in another Virtual Private Cloud (VPC), called gce-network, that has no overlapping IP ranges with the first VPC. This instance needs to connect to the application on GKE. You want to minimize effort. What should you do?

- A. 1. In GKE, create a Service of type NodePort that uses the application's Pods as backend.2. Create a Compute Engine instance called proxy with 2 network interfaces, one in each VPC.3. Use iptables on this instance to forward traffic from gce-network to the GKE nodes.4. Configure the Compute Engine instance to use the address of proxy in gce-network as endpoint.
- B. 1. In GKE, create a Service of type LoadBalancer that uses the application's Pods as backend.2. Add an annotation to this service: cloud.google.com/load-balancer-type: Internal3. Peer the two VPCs together.
4. Configure the Compute Engine instance to use the address of the load balancer that has been created.
- C. 1. In GKE, create a Service of type LoadBalancer that uses the application's Pods as backend.2. Add a Cloud Armor Security Policy to the load balancer that whitelists the internal IPs of the MIG's instances.
3. Configure the Compute Engine instance to use the address of the load balancer that has been created.
- D. 1. In GKE, create a Service of type LoadBalancer that uses the application's Pods as backend.2. Set the service's externalTrafficPolicy to Cluster.3. Configure the Compute Engine instance to use the address of the load balancer that has been created.

Answer: D

Explanation:

performs a peering between the two VPC's (the statement makes sure that this option is feasible since it clearly specifies that there is no overlapping between the ip ranges of both vpc's), deploy the LoadBalancer as internal with the annotation, and configure the

endpoint so that the compute engine instance can access the application internally, that is, without the need to have a public ip at any time and therefore, without the need to go outside the google network. The traffic, therefore, never crosses the public internet.

NEW QUESTION # 180

You just installed the Google Cloud CLI on your new corporate laptop. You need to list the existing instances of your company on Google Cloud. What must you do before you run the gcloud compute instances list command?

Choose 2 answers

- A. Create a Google Cloud service account, and download the service account key. Place the key file in a folder on your machine where gcloud CLI can find it.
- B. **Run gcloud config set project \$my_project to set the default project for gcloud CLI.**
- C. Download your Cloud Identity user account key. Place the key file in a folder on your machine where gcloud CLI can find it.
- D. **Run gcloud auth login, enter your login credentials in the dialog window, and paste the received login token to gcloud CLI.**
- E. Run gcloud config set compute/zone \$my_zone to set the default zone for gcloud CLI.

Answer: B,D

Explanation:

Before you run the gcloud compute instances list command, you need to do two things: authenticate with your user account and set the default project for gcloud CLI.

To authenticate with your user account, you need to run gcloud auth login, enter your login credentials in the dialog window, and paste the received login token to gcloud CLI. This will authorize the gcloud CLI to access Google Cloud resources on your behalf1.

To set the default project for gcloud CLI, you need to run gcloud config set project \$my_project, where

\$my_project is the ID of the project that contains the instances you want to list. This will save you from having to specify the project flag for every gcloud command2.

Option B is not recommended, because using a service account key increases the risk of credential leakage and misuse. It is also not necessary, because you can use your user account to authenticate to the gcloud CLI3.

Option C is not correct, because there is no such thing as a Cloud Identity user account key. Cloud Identity is a service that provides identity and access management for Google Cloud users and groups4. Option D is not required, because the gcloud compute instances list command does not depend on the default zone. You can list instances from all zones or filter by a specific zone using the --filter flag.

NEW QUESTION # 181

You want to select and configure a cost-effective solution for relational data on Google Cloud Platform. You are working with a small set of operational data in one geographic location. You need to support point-in-time recovery. What should you do?

- A. Select Cloud Spanner. Set up your instance as multi-regional.
- B. **Select Cloud SQL (MySQL). Verify that the enable binary logging option is selected.**
- C. Select Cloud SQL (MySQL). Select the create failover replicas option.
- D. Select Cloud Spanner. Set up your instance with 2 nodes.

Answer: B

Explanation:

NEW QUESTION # 182

You are a Google Cloud organization administrator. You need to configure organization policies and log sinks on Google Cloud projects that cannot be removed by project users to comply with your company's security policies. The security policies are different for each company department. Each company department has a user with the Project Owner role assigned to their projects. What should you do?

- A. Use a standard naming convention for projects that includes the department name. Configure organization policies on the organization and log sinks on the projects.
- B. Organize projects under folders for each department. Configure both organization policies and log sinks on the folders
- C. Organize projects under folders for each department. Configure organization policies on the organization and log sinks on the folders.
- D. Use a standard naming convention for projects that includes the department name. Configure both organization policies and log sinks on the projects.

Answer: A

NEW QUESTION # 183

You want to configure 10 Compute Engine instances for availability when maintenance occurs. Your requirements state that these instances should attempt to automatically restart if they crash. Also, the instances should be highly available including during system maintenance. What should you do?

- A. Create an instance template for the instances. Set 'Automatic Restart' to off. Set 'On-host maintenance' to Terminate VM instances. Add the instance template to an instance group.
- B. Create an instance group for the instances. Set the 'Autohealing' health check to healthy (HTTP).
- C. Create an instance group for the instance. Verify that the 'Advanced creation options' setting for 'do not retry machine creation' is set to off.
- D. Create an instance template for the instances. Set the 'Automatic Restart' to on. Set the 'On-host maintenance' to Migrate VM instance. Add the instance template to an instance group.

Answer: A

NEW QUESTION # 184

.....

To be successful in a professional exam like the Google Associate-Cloud-Engineer exam, you must know the criteria to pass it. You should know the type of Google Associate Cloud Engineer Exam questions, the pattern of the Google Associate Cloud Engineer Exam exam, and the time limit to complete the Associate-Cloud-Engineer Exam. All these factors help you pass the Google Associate-Cloud-Engineer exam. ValidDumps is your reliable partner in getting your Associate-Cloud-Engineer certification. The Google Associate-Cloud-Engineer exam dumps help you achieve your professional goals.
