The three versions of the InsuranceSuite-Analyst test prep boost different strengths and you can find the most appropriate choice. For example, the PDF version is convenient for download and printing and is easy and convenient for review and learning. It can be printed into papers and is convenient to make notes. You can learn the InsuranceSuite-Analyst Test Prep at any time or place and repeatedly practice.

Guidewire Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam Sample Questions (Q30-Q35):

NEW QUESTION # 30

User story cards are filled out during elaboration and contain details about _____.

- A. Design elements including UI Mock up and Type-lists
- B. Product configuration steps
- C. Guiding Principles
- **D. Validation and Business Rules**

Answer: D

Explanation:

During Elaboration Workshops, the primary goal is to define the behavior of the system required to satisfy the business need. This is captured on the User Story Card primarily through Validation and Business Rules (Option C).

* Functional Logic: The core "detail" of a user story is the Acceptance Criteria . Acceptance Criteria are essentially a list of Business Rules (what the system must do) and Validations (what the system must check/prevent) to be considered "Done."

* Analyst Role: The Business Analyst's main responsibility is to document these rules to ensure the developer builds the correct logic.

Why other options are less correct:

* B. Design elements: While UI Mockups and Typelists are often attached or referenced , they represent the "Solution Design." The User Story Card itself focuses on the Requirement (The Rules). In Guidewire SurePath methodology, specific "Design" documents (like detailed UI specs) are often secondary to the functional Acceptance Criteria (Rules) defined in the story.

* A & D: Guiding Principles are high-level project values, and Configuration Steps are developer tasks.

NEW QUESTION # 31

When a new requirement for a commercial general liability product necessitates a change to the Guidewire data model, business analysts are responsible for defining the requirements for _____ and _____ that the base application does not store.

- A. External system connections, batch processing schedules
- B. Core entity relationships, database indexing
- **C. New tyelist values, additional entity fields**
- D. System performance metrics, security access roles
- E. Database table structures, complex logic extensions
- F. Integration data mapping, user interface mockups

Answer: C

Explanation:

When Guidewire InsuranceSuite requires a data model change, Business Analysts play a key role in defining what new data must be stored to support business requirements. The correct answer is Option B: new type list values and additional entity fields. Business Analysts are responsible for identifying new business data elements that are not available in the out-of-the-box product. This often includes defining new type list values to represent controlled sets of business options, such as classifications, statuses, or categories. Type lists ensure data consistency and usability across rules, UI, and integrations. Analysts also define requirements for additional entity fields. These fields store new information such as dates, indicators, or free-text notes that support the business process. Analysts specify the business meaning, usage, and constraints of these fields, while developers implement the technical changes. The remaining options fall outside the analyst's responsibility. Performance metrics, security roles, database indexing, table structures, and complex logic are technical or architectural concerns handled by developers or architects. Integration mapping and UI mockups may involve analysts, but they do not define changes to the data model itself. By focusing on type lists and entity fields, Business Analysts ensure the Guidewire data model evolves in a controlled, business-driven manner that supports functionality without unnecessary technical complexity.

NEW QUESTION # 32

An example of a tool built by Guidewire Professional Services to support implementation projects is:

- A. Guiding principle
- **B. User story card**
- C. Requirement
- D. Business objective

Answer: B

Explanation:

The User Story Card is a key tool developed and standardized by Guidewire Professional Services to support InsuranceSuite implementation projects, making Option A the correct answer. User story cards provide a structured, consistent way to capture requirements using an Agile approach aligned with SurePath methodology. They define business intent, acceptance criteria, and scope boundaries in a format that supports elaboration, estimation, development, and testing. The remaining options are not tools. Requirements (Option B), business objectives (Option C), and guiding principles (Option D) are types of content, not standardized delivery tools. User story cards enable consistent communication across analysts, developers, and testers and are central to successful Guidewire implementations.

NEW QUESTION # 33

From the answers below, select the option that best describes Guidewire Accelerators.

- A. Are specific user stories developed early in the project to accelerate task completion
- **B. Provide an extension to a core product to meet a specific need**
- C. Are always complete solutions ready and available for use on your project
- D. Are available on <https://education.guidewire.com>

Answer: B

Explanation:

Guidewire Accelerators are reusable assets designed to speed up implementation activities and reduce effort by leveraging proven approaches. Among the available options, Option B best describes their purpose. Accelerators typically provide extensions, utilities, templates, or tools that complement core Guidewire products to address common implementation needs. They are not full, ready-made solutions but instead help teams avoid reinventing common components or approaches. Accelerators are often accessed via the Guidewire Marketplace and may include configuration helpers, integration utilities, migration tools, or reference implementations. Their goal is to improve efficiency while remaining aligned with Guidewire standards and upgradeability principles. The other options are incorrect. Accelerators are not always complete solutions (Option A), are not individual user stories (Option B), and are not hosted on the education portal (Option C). By understanding what Accelerators are and what they are not, analysts can better evaluate when to leverage them to reduce risk, cost, and delivery timelines in Guidewire projects.

NEW QUESTION # 34

Which resource provides specific guidance to Business Analysts on how to document User Story Cards?

- A. Miro - Business Analyst Handbook
- B. SurePath collateral - User Story Guide
- C. Miro - User Story Job Aid
- **D. SurePath collateral - User Story Handbook**

Answer: D

Explanation:

In Guidewire SurePath methodology, documenting high-quality User Story Cards is a critical responsibility of the Business Analyst. To support this, Guidewire provides standardized collateral that defines how stories should be written, structured, and refined to ensure consistency and clarity across implementations. The correct resource for this purpose is the SurePath collateral - User Story Handbook, making Option B the correct answer.

The User Story Handbook is specifically designed for Business Analysts working on Guidewire projects. It provides detailed guidance on how to document user stories, including recommended story formats, required elements, and examples aligned with Guidewire best practices. The handbook explains how to capture business intent, define scope boundaries, and write clear, testable acceptance criteria that support Agile delivery.

This resource also aligns user stories with Guidewire out-of-the-box (OOTB) functionality, helping analysts avoid unnecessary customization and ensuring that requirements are value-driven. It supports consistency across teams by establishing a shared understanding of what constitutes a "ready" story before it enters development.

The other options are incorrect. Miro-based resources (Options A and D) may be used as collaboration or visualization tools but are not official Guidewire guidance for documenting user stories. The "User Story Guide" (Option C) is not the recognized SurePath resource; the User Story Handbook is the authoritative reference.

By using the SurePath User Story Handbook, Business Analysts ensure that stories are well-structured, aligned with Agile principles, and ready for elaboration, story huddles, and successful implementation within Guidewire InsuranceSuite.

NEW QUESTION # 35

.....

Many people may worry that the InsuranceSuite-Analyst guide torrent is not enough for them to practice and the update is slowly. We guarantee you that our experts check whether the InsuranceSuite-Analyst study materials is updated or not every day and if there is the update the system will send the update to the client automatically.
