

# Latest NSE7\_CDS\_AR-7.6 Material - Latest NSE7\_CDS\_AR-7.6 Exam Tips

P.S. Free 2026 Fortinet NSE7\_CDS\_AR-7.6 dumps are available on Google Drive shared by DumpStillValid: [https://drive.google.com/open?id=1UWrI9CH69eT7ZaV11IDGgN2f-BHI\\_C92](https://drive.google.com/open?id=1UWrI9CH69eT7ZaV11IDGgN2f-BHI_C92)

By seeing your goofs you can work on your show continually for the Fortinet NSE7\_CDS\_AR-7.6 approach. You can give vast phony tests to make them ideal for Fortinet NSE7\_CDS\_AR-7.6 and can check their past given exams. Fortinet NSE7\_CDS\_AR-7.6 Dumps will give reliable free updates to our clients generally all the Fortinet NSE 7 - Public Cloud Security 7.6 Architect.

## Fortinet NSE7\_CDS\_AR-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Security Solutions Deployment: This domain covers deploying Fortinet solutions to protect IaaS and CaaS environments, and integrating them with cloud native security tools.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Troubleshooting: This domain involves resolving connectivity issues in AWS and Azure environments, including diagnosing problems with SDN connectors.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Automation Tools: This domain focuses on using infrastructure-as-code tools like Terraform, Ansible, Azure Bicep, and AWS CloudFormation to automate cloud infrastructure and Fortinet solution deployments.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Cloud Infrastructure Monitoring: This domain addresses monitoring AWS and Azure networks using Fortinet monitoring tools designed for cloud workload visibility and management.</li></ul>

## Latest NSE7\_CDS\_AR-7.6 Exam Tips, NSE7\_CDS\_AR-7.6 New Question

We have three versions of NSE7\_CDS\_AR-7.6 practice questions for you to choose: PDF version, Soft version and APP version. PDF version of NSE7\_CDS\_AR-7.6 training materials is legible to read and remember, and support printing request, so you can have a print and practice in papers. Software version of NSE7\_CDS\_AR-7.6 practice materials supports simulation test system, and give times of setup has no restriction. Remember this version support Windows system users only. App online version of NSE7\_CDS\_AR-7.6 Exam Questions is suitable to all kinds of equipment or digital devices and supportive to offline exercise on the condition that you practice it without mobile data.

## Fortinet NSE 7 - Public Cloud Security 7.6 Architect Sample Questions (Q34-Q39):

### NEW QUESTION # 34

Your DevOps team is evaluating different Infrastructure as Code (IaC) solutions for deploying complex Azure environments. What is an advantage of choosing Azure Bicep over other IaC tools available?

- A. Azure Bicep generates deployment logs that are optimized to improve error handling.
- **B. Azure Bicep provides immediate support for all Azure services, including those in preview.**
- C. Azure Bicep can reduce deployment costs by limiting resource utilization during testing.
- D. Azure Bicep requires less frequent schema updates than Azure Resource Manager (ARM) templates.

**Answer: B**

### NEW QUESTION # 35

Refer to the exhibit.

#### what-if tool

```
Resource and property changes are indicated with these symbols:
- Delete
+ Create
~ Modify

The deployment will update the following scope:
Scope: /subscriptions/./resourceGroups/DemoGroup
~ Microsoft.Network/virtualNetworks/ServerApps_vnet [2023-11-01]
  - tags.Owner: "AppAdmins"
  ~ properties.addressSpace.addressPrefixes: [
    - 0: "10.0.0.0/16"
    + 1: "192.168.0.0/24"
  ]
  ~ properties.subnets: [
    ~ 0:
      ~ properties.addressPrefix: "10.0.1.0/24" => "10.0.2.0/24"
  ]
]
Resource changes: 1 to modify.
```

An administrator used the what-if tool to preview changes to an Azure Bicep file. What will happen if the administrator decides to apply these changes in Azure?

- A. Subnet 10.0.1.0/24 will replace subnet 10.0.2.0/24.
- B. The ServerApps VNet will be renamed.
- **C. This deployment will fail and no changes will be applied.**
- D. A new subnet will be added to ServerApps.

**Answer: C**

Explanation:

Based on the Fortinet NSE 7 - Public Cloud Security 7.4/7.6 curriculum and Azure Resource Manager (ARM) deployment logic, the what-if tool provides a predictive analysis of infrastructure changes.

\* Analyzing the Modification Symbols (Option B): The exhibit shows several critical changes being attempted simultaneously on the ServerApps\_vnet.

\* VNet Address Space Change: The symbol - (Delete) is next to the address space 10.0.0.0/16, and + (Create) is next to 192.168.0.0/24.

\* Subnet Modification: Further down, the symbol ~ (Modify) indicates an attempt to change the prefix of an existing subnet from 10.0.1.0/24 to 10.0.2.0/24.

\* Azure Deployment Constraints: According to the FortiOS 7.6 Azure Administration Guide, Azure networking has strict dependencies. You cannot delete or modify an address space that contains active subnets or resources.

\* Why the deployment fails: The what-if output shows the administrator is trying to remove the 10.0.0.0 /16 address range. However, the existing subnet 10.0.1.0/24 is still "resident" within that range during the transaction. Because the subnet is currently attached to the address space being deleted, Azure Resource Manager will reject the deployment as an invalid operation. The attempt to add a new

192.168.0.0/24 range does not resolve the conflict of removing the active range.

Why other options are incorrect:

\* Option A: The tool shows that 10.0.1.0/24 is being changed to 10.0.2.0/24, not that one is replacing the other as a new entity.

\* Option C: The symbols show a modification (~) of an existing subnet (index 0:), not the creation (+) of an entirely new subnet.

\* Option D: The VNet name ServerApps\_vnet is not being changed; only its internal properties (tags, address space, and subnets) are being modified.

### NEW QUESTION # 36

An administrator implements FortiWeb ingress controller to protect containerized web applications in an AWS Elastic Kubernetes Service (EKS) cluster.

What can you conclude about the topology shown in FortiView?

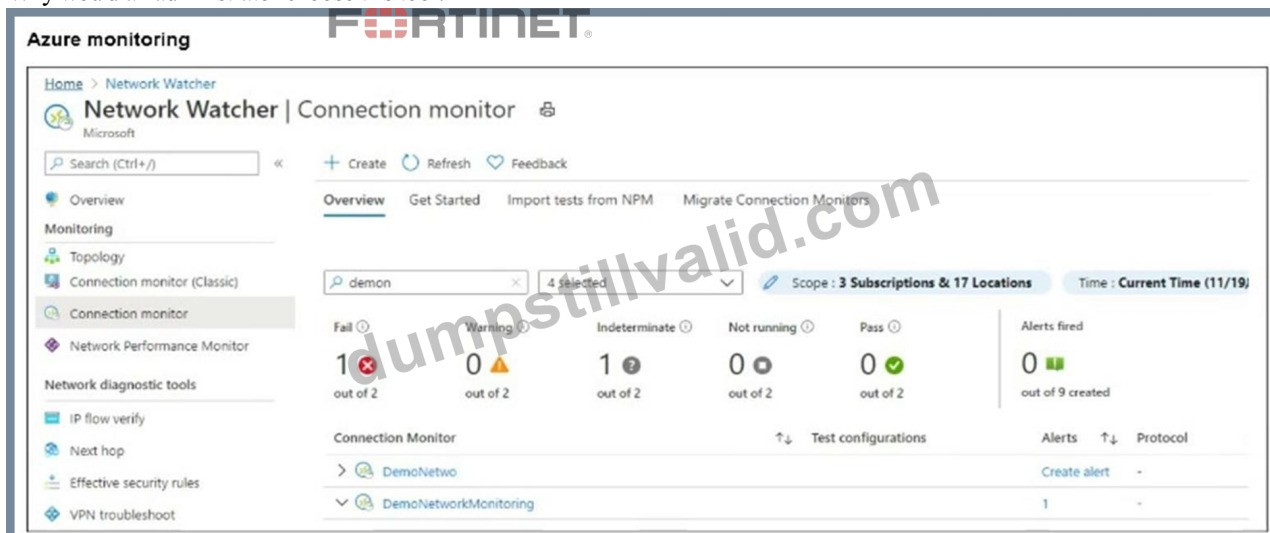

- A. Adding a new service will update the FortiWeb configuration automatically.
- **B. The FortiWeb VM gets the latest cluster information through an SDN connector.**
- C. Both services will be load balanced among the two nodes and the four pods.
- D. This topology has two services and two ingress controllers deployed.

**Answer: B**

### NEW QUESTION # 37

Refer to the exhibit. After analyzing the native monitoring tools available in Azure, an administrator decides to use the tool displayed in the exhibit.

Why would an administrator choose this tool?

- A. To help debug issues affecting virtual network gateways.
- B. To obtain, and later examine, traffic flow data with a visualization tool.
- C. To compare the latency of an on-premises site with the latency of an Azure application.
- D. To view details about Azure resources and their relationships across multiple regions.

**Answer: C**

Explanation:

The exhibit shows Azure Network Watcher - Connection Monitor, which is used to track and measure connectivity and latency between on-premises environments, Azure applications, and across Azure regions. An administrator would choose this tool to compare the latency of an on-premises site with the latency of an Azure-hosted application and troubleshoot connectivity issues.

### NEW QUESTION # 38

Refer to the exhibit.

```

Troubleshooting command

azadmin@Azure:~$ az feature show --namespace Microsoft.Network --name EnableHighAvailabilityMode
{
  "id": "/subscriptions/21100b64-ceed-19cc-a00b-017ec43592ac/providers/Microsoft.Features/providers/Microsoft.Network/features/EnableHighAvailabilityMode",
  "name": "Microsoft.Network/EnableHighAvailabilityMode",
  "properties": {
    "state": "Unregistered"
  },
  "type": "Microsoft.Features/providers/features"
}

```

A managed security service provider (MSSP) administration team is trying to deploy a new HA cluster in Azure to filter traffic to and from a client that is also using Azure. However, every deployment attempt fails, and only some of the resources are deployed successfully. While troubleshooting this issue, the team runs the command shown in the exhibit.

What are the implications of the output of the command?

- A. The team will not be able to deploy an active-active (A-P) FortiGate HA cluster with Azure load balancer.
- B. The team will not be able to deploy an A-P FortiGate HA cluster with Azure gateway load balancer.
- C. The team will not be able to deploy an active-passive (A-P) FortiGate high availability (HA) cluster with SDN connector.
- D. The team will not be able to deploy an A-P FortiGate HA cluster with Azure load balancer.

**Answer: A**

### NEW QUESTION # 39

.....

If you can obtain the job qualification NSE7\_CDS\_AR-7.6 certificate, which shows you have acquired many skills. In this way, your value is greatly increased in your company. Then sooner or later you will be promoted by your boss. Our NSE7\_CDS\_AR-7.6 preparation exam really suits you best. Our NSE7\_CDS\_AR-7.6 Study Materials can help you get your certification in the least time with the least efforts. With our NSE7\_CDS\_AR-7.6 exam questions for 20 to 30 hours, and you will be ready to take the exam confidently.
