

2V0-11.25 Practice Test & Exam 2V0-11.25 Consultant

2026 Latest PassLeader 2V0-11.25 PDF Dumps and 2V0-11.25 Exam Engine Free Share: <https://drive.google.com/open?id=1zA5agQCjaFkKEXGCgFtDOHh02JRlUix>

We are never satisfied with the present situation and expand and update the 2V0-11.25 exam practice guide by all means. We focus on the innovation and organize our expert team to compile new knowledge points and update the test bank. We treat our clients as our god and treat their supports to our 2V0-11.25 Study Materials as our driving forces to march forward. So the clients can enjoy the results of the latest innovation on 2V0-11.25 exam questions and achieve more learning resources. The credits belong to our diligent and dedicated professional innovation team and our experts.

VMware 2V0-11.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Plan and Design the VMware by Broadcom Solution: There are no testable objectives in this section. Still, it is intended for solution architects who need to plan and design VMware Cloud Foundation deployments, focusing on sizing, architecture selection, and network storage design.
Topic 2	<ul style="list-style-type: none"> Install, Configure, Administrate the VMware by Broadcom Solution: This section of the exam measures skills of the VMware Cloud Foundation administrator and covers the installation and configuration processes for VMware Cloud Foundation components, deploying and configuring management domains, NSX Edge Clusters, and the VMware Aria Suite Lifecycle. It assesses the ability to deploy workload domains, enable vSphere IaaS control plane, create vSphere namespaces, manage stretched clusters, and use VMware Cloud Foundation APIs. Candidates are also tested on scaling deployments, performing Day 2 operations like backup, recovery, lifecycle management, VM lifecycle management, configuring networking and storage, managing ESXi hosts, implementing encryption, and operationalizing VMware NSX, vSAN, and Aria Suite. The section is comprehensive, targeting those responsible for the ongoing administration and optimization of VMware environments.

Topic 3	<ul style="list-style-type: none"> • Troubleshoot and Optimize the VMware by Broadcom Solution: This section of the exam measures skills of the cloud infrastructure support engineer and covers diagnosing and resolving technical issues related to VMware Cloud Foundation deployment and operations. It includes troubleshooting the deployment process, vSphere, networking, vSAN, SDDC Manager, and Aria Suite. The section also evaluates the ability to optimize infrastructure performance, manage resources, and ensure efficient operation, focusing on the practical aspects of maintaining and enhancing VMware Cloud Foundation environments.
Topic 4	<ul style="list-style-type: none"> • IT Architectures, Technologies, Standards: There are no testable objectives in this section. However, this area establishes the foundational knowledge expected of cloud administrators, such as understanding basic IT infrastructure, virtualization, and cloud models. This section is relevant for cloud administrators and infrastructure engineers.
Topic 5	<ul style="list-style-type: none"> • VMware by Broadcom Solution: This section of the exam measures skills of the cloud administrator and covers identifying VMware Cloud Foundation components like vSphere, vSAN, and NSX, as well as their architecture, including stretched configurations. It also assesses knowledge of requirements for implementing private cloud solutions, use cases for VMware Aria Suite components, vSphere IaaS control plane, Data Services Manager, and VMware Cloud Foundation Add-Ons. The focus is on the ability to recognize and apply the correct VMware solutions for various enterprise scenarios.

Selecting 2V0-11.25 Practice Test - No Worry About VMware Cloud Foundation 5.2 Administrator

The PassLeader is offering valid, updated, and real VMware 2V0-11.25 practice test questions. The PassLeader is committed to making the VMware 2V0-11.25 exam preparation the simplest, easiest, and fast. We are quite confident that with VMware 2V0-11.25 Practice Exam Questions you can pass the challenging VMware 2V0-11.25 exam.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q94-Q99):

NEW QUESTION # 94

An administrator is deploying an NSX Edge cluster from SDDC Manager. The administrator plans to configure the Border Gateway Protocol (BGP) to enable dynamic routing with the upstream physical networking.

Which three values must be provided when configuring BGP? (Choose three.)

- A. BGP Autonomous System Number (ASN)
- B. BGP Router ID
- C. BGP Peer IP
- D. BGP Password
- E. BGP Route Topology

Answer: A,B,C

Explanation:

The BGP Autonomous System Number (ASN) is a unique identifier that must be configured for BGP to define the routing domain.

The BGP Router ID is used to uniquely identify the BGP router in the network.

The BGP Peer IP is required to establish a BGP peering relationship with an upstream router or another BGP-enabled device.

NEW QUESTION # 95

An administrator has been tasked with adding a new VI workload Domain to an instance of VMware Cloud Foundation (VCF).

The administrator only has two prepared ESXi host servers showing in SDDC Manager.

The new VI Workload Domain must use vSphere Lifecycle Images.

Which three supported principal storage options are available to the administrator when configuring the new VI Workload Domain? (Choose three.)

- A. NFS v3

- B. VMFS on local disk
- C. VMFS on FC
- D. iSCSI
- E. VSAN
- F. vVols

Answer: A,C,F

NEW QUESTION # 96

As part of the preparation for deploying VMware Aria Suite Lifecycle, an administrator needs to create Application Virtual Networks (AVNs).

Which three steps are necessary to complete the configuration of AVNs? (Choose three.)

- A. Define the IP address ranges for the AVNs.
- B. Setup routing policies for AVNs.
- C. Assign AVNs to specific ESXi hosts.
- D. Enable AVNs in the vCenter Server.
- E. Configure the AVNs in the NSX Manager.

Answer: A,C,E

Explanation:

Configure the AVNs in the NSX Manager: AVNs (Application Virtual Networks) are configured within NSX Manager to define the network segments and ensure proper network segmentation for workloads.

Assign AVNs to specific ESXi hosts: After configuring the AVNs in NSX Manager, they need to be assigned to the appropriate ESXi hosts to ensure they are properly mapped to the compute resources.

Define the IP address ranges for the AVNs: Each AVN must have an associated IP address range to provide network addressing for the workloads deployed on them.

NEW QUESTION # 97

An administrator needs to ensure that specific virtual machines within a VMware Cloud Foundation environment use storage that can tolerate at least two host failures. As resources are limited, the configuration should use the available resources as efficiently as possible.

Which three steps should be performed to configure a storage policy that meets the requirements? (Choose three.)

- A. Set Failures to Tolerate to "2 failures - RAID-1 (Mirroring)" in the policy configuration.
- B. Set Failures to Tolerate to "2 failures - RAID-6 (Erasure Coding)" in the policy configuration.
- C. Configure the policy to use thin provisioning.
- D. Apply the storage policy to the target VMs.
- E. Reconfigure the existing Default Storage Policy in the vSphere Client.
- F. Create a new VM Storage Policy in the vSphere Client.

Answer: B,D,F

Explanation:

A new VM storage policy needs to be created in the vSphere Client to define specific requirements for the storage configuration, including tolerance for two host failures.

Once the storage policy is created, it must be applied to the specific virtual machines that require the storage configuration that tolerates two host failures.

To ensure the storage configuration tolerates two host failures efficiently, RAID-6 (Erasure Coding) is the appropriate choice. RAID-6 can tolerate two host failures while minimizing resource usage compared to other configurations like RAID-1.

NEW QUESTION # 98

DRAG DROP

Put the following steps in the correct order to optimize resource allocation using Aria Operations.

□

Answer:
