最好的的Sharing-and-Visibility-Architect題庫資料，覆蓋全真Salesforce Certified Sharing and Visibility Architect Sharing-and-Visibility-Architect考試考題

Salesforce Sharing-and-Visibility-Architect認證證書可以加強你的就業前景，可以開發很多好的就業機會。KaoGuTi是一個很適合參加Salesforce Sharing-and-Visibility-Architect認證考試考生的網站，不僅能為考生提供Salesforce Sharing-and-Visibility-Architect認證考試相關的所有資訊，而且還為你提供一次不錯的學習機會。KaoGuTi能夠幫你簡單地通過Salesforce Sharing-and-Visibility-Architect認證考試。

Salesforce共享和可見性 - 架構認證考試是Salesforce生態系統中最負盛名的認證之一。它旨在認識到涉及Salesforce數據共享和可見性的架構和實施解決方案方面的專家。該認證是針對具有豐富設計和實施解決方案的豐富經驗的個人，涉及複雜的共享和可見性要求。

最新的 Salesforce Architect Sharing-and-Visibility-Architect 免費考試真題 (Q50-Q55):

問題 #50

Universal containers (UC) has a partner community for its 200 distributors. UC customer accounts are ..

organization-wide default setting for the custom Delivery object is private.

How can an architect advise UC to grant all users at a distributor access to delivery records for all customer distributor?

- A. Create a criteria-based sharing rule that shares delivery records matching the Distributor to user distributor.
- B. Give ownership of the delivery record to a distributor user.
- C. Create a criterion- based sharing rule that shares delivery records matching the Distributor to users of a Public Group created for the distributor.
- **D. Create a Sharing set for the Distributor profile to grant access to the Delivery object.**

答案： D

解題說明：

Explanation

Creating a Sharing set for the Distributor profile to grant access to the Delivery object is the correct way to share records with users in a partner community. Sharing sets allow you to share records based on a common account or contact². Criteria-based sharing rules are not available for partner communities³.

問題 #51

Universal Containers has Public Read Only sharing settings on the Opportunity object. What Opportunity access options can the user see while adding account team members to the Account?

- A. Private and Read Only
- B. Private
- **C. Read Only and Read/Write**
- D. Read Only

答案： C

解題說明：

Explanation

When adding account team members to an account, the user can see the opportunity access options that are equal to or less than the organization-wide default access level for the opportunity object³. Since the organization-wide default access level for the opportunity object is Public Read Only, the user can see Read Only and Read/Write options. Private and Private and Read Only are not valid options.

問題 #52

Universal Containers would like to store an encryption key within Salesforce for use in Apex Code, but does not want users to be able to see this confidential key. Users require the view setup permission.

How can Universal Containers securely store the confidential key?

- A. Create 6 custom metadata type that stores the encryption key. Make sure that only the admin profile has access to the custom metadata type \$0 that end users cannot access the encryption key.
- B. Create 4 protected custom metadata type that stores the encryption key. Package the protected custom metadata type with its associated records in an unlocked package. Install the package In the production org.
- **C. Create a protected custom metadata type that stores the encryption key. Package the protected custom metadata type with its associated records in a managed package. Install the package in the production org.**

答案： C

解題說明：

Explanation

Creating a protected custom metadata type that stores the encryption key and packaging it with its associated records in a managed package is the best way to securely store the confidential key, as protected custom metadata types are only accessible within the package namespace and cannot be viewed or modified by subscribers². Creating a protected custom metadata type and packaging it in an unlocked package will not work, as unlocked packages do not support protected custom metadata types³. Creating a custom metadata type and restricting access to the admin profile will not work, as users with View Setup permission can still view the custom metadata type and its records.

問題 #53

Which three areas should the Architect review in order to increase performance of "Record Access" and "Sharing" calculations? Choose 3 answers.

- A. Custom Object data, to ensure that no Account has more than 10,000 Custom Objects that look up to it.
- B. Record ownership, to ensure that no user owns more than 10,000 Object records in the system.
- C. Opportunity data, to ensure that no Account has more than 10,000 Opportunity records that are related to it.
- D. Apex Managed Sharing triggers, to ensure that no trigger is querying more than 10,000 Object records.

答案: A,B,C

問題 #54

Universal Containers (UC) has 200 distributors that use Partner Community licenses.

Partners cannot see each other's data, but UC is also trying to give more visibility to data for certain individuals at a distributor.

HOW can an Architect give users in the partner user role access to all Case and Container records owned by any user, regardless of role, at the same distributor?

- A. Create a Permission Set granting "View All" permission to Case and Container records.
- B. Create an ownership-based sharing rule.
- C. Create sharing sets.
- D. Give super user permission to the individual partner users.

答案: D

解題說明:

Explanation

To give users in the partner user role access to all Case and Container records owned by any user at the same distributor, an Architect can give super user permission to the individual partner users. Super user permission allows partner users to access data owned by other partner users belonging to the same account or below them in the role hierarchy. Creating an ownership-based sharing rule will not work, as it will share records based on the owner's role or territory, not their account. Creating sharing sets will not work, as they are only available for Customer Community licenses, not Partner Community licenses. Creating a Permission Set granting "View All" permission to Case and Container records will not work, as it will give access to all records in those objects, regardless of their owner or account.
