The modern Salesforce world is changing its dynamics at a fast pace. To stay and compete in this challenging market, you have to learn and enhance your in-demand skills. Fortunately, with the Salesforce Certified Platform Administrator II (Plat-Admn-301) certification exam you can do this job nicely and quickly. To do this you just need to enroll in the Salesforce Certified Platform Administrator II (Plat-Admn-301) certification exam and put all your efforts to pass the Salesforce Certified Platform Administrator II (Plat-Admn-301) certification exam.

Salesforce Plat-Admn-301 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Security and Access: This section of the exam measures the skills of Salesforce Administrator and covers how record-level access, field access, and sharing models impact data visibility across the system. It focuses on understanding controlled-by-parent relationships, territory management, role hierarchies, and access to reports, dashboards, and email folders. It also includes comparing custom profiles, permission sets, and delegated administration, along with evaluating different authentication methods. The section also addresses the structure of business models such as person accounts, standard accounts, contacts, and contact-to-multiple-account relationships.
Topic 2	<ul style="list-style-type: none">• Objects and Applications: This section of the exam measures the skills of a Salesforce Business Analyst and covers selecting appropriate object and application-level solutions to meet business needs. It focuses on identifying when to use master-detail relationships, lookups, junction objects, related lists, record types, Schema Builder, and Object Creator. The section also includes improving UI and user experience using App Manager, Lightning App Builder, Dynamic Forms, standard Lightning components, console apps, and tools like the Lightning page analyze button.

Topic 3	<ul style="list-style-type: none"> • Environment Management and Deployment: This section of the exam measures skills of Salesforce Administrator and covers moving metadata between environments using tools such as sandboxes, change sets, and managed or unmanaged AppExchange packages. It explains the capabilities and best practices related to deploying changes through change sets to ensure smooth and controlled migrations.
Topic 4	<ul style="list-style-type: none"> • Data and Analytics Management: This section of the exam measures skills of Salesforce Data Analyst and covers data quality assessment, data enrichment, and duplicate management. It explains how to choose appropriate reporting and analytics tools for advanced requirements, including custom report types, snapshots, formulas, joined reports, and dashboard configurations. It also covers methods for connecting external data sources using big objects, external objects, data warehouses, data lakes, and Salesforce Connect. Finally, it describes the suitable tools and methods for importing data, including Data Loader, Data Import Wizard, and external IDs.

Many people have benefited from learning our Plat-Admn-301 learning braindumps. Most of them have realized their dreams and became successful.

Salesforce Certified Platform Administrator II Sample Questions (Q45-Q50):

NEW QUESTION # 45

Cloud Kicks would like to reassign ownership of all leads that are open and more than 60 days old. The system administrator has written an assignment rule to distribute these leads to the correct owners or queues.

Which two tools should the administrator use to update the owner of these leads?

Choose 2 answers

- A. Bulk API
- B. Mass Update
- C. Import Wizard
- D. Dataloader.io

Answer: A,D

Explanation:

Bulk API and Dataloader.io are both tools that can be used to update large numbers of records in Salesforce.

Bulk API is a RESTful API that allows you to create, update, delete, or query millions of records asynchronously by submitting batches of data. Dataloader.io is a web-based data loader tool that allows you to import, export, or delete data using a simple user interface. References: https://developer.salesforce.com/docs/atlas.en-us.api_asynch.meta/api_asynch/asynch_api_intro.htm <https://dataloader.io/>

NEW QUESTION # 46

AW Computing uses a custom Invoice object to track invoices related to accounts. The administrator wants to use roll-up summary fields to view high-level information at a glance on the account record.

Which two considerations should an administrator remember about roll-up summary fields?

Choose 2 answers

- A. Rollup fields are calculated prior to save.
- B. Roll-up summary fields prevent the conversion of a master-detail relationship to a lookup.
- C. Roll-up summary fields are created on the master side of a master-detail relationship.
- D. Roll-up types include COUNT, SUM, and AVG.

Answer: C,D

Explanation:

Two considerations that the administrator should remember about roll-up summary fields are:

* Roll-up types include COUNT, SUM, and AVG. A roll-up type is a function that determines how the data from the child records is aggregated and displayed on the parent record. The available roll-up types are COUNT, which counts the number of child records; SUM, which adds up the values of a numeric field on the child records; AVG, which calculates the average value of a numeric field on the child records; MIN, which displays the lowest value of a field on the child records; and MAX, which displays the highest value of a field on the child records.

* Roll-up summary fields are created on the master side of a master-detail relationship. A master-detail relationship is a type of relationship that links two objects together such that the master object controls certain behaviors of the detail object, such as security and deletion. A roll-up summary field is a type of field that displays a value that is calculated from child records related to a parent record. Roll-up summary fields can only be created on the master object of a master-detail relationship or on a lookup relationship if it is set as required.

The other two options are incorrect because:

* Roll-up summary fields do not prevent the conversion of a master-detail relationship to a lookup. They only prevent it if they reference a formula field that includes another relationship.

* Rollup fields are not calculated prior to save. They are calculated after save and may take some time to update.

NEW QUESTION # 47

Cloud Kicks maintains Inventory in a legacy application. Management wants the information to also be available to view and report on in Salesforce.

Which action should the administrator take to achieve this goal?

- A. Import the data into a custom object when needed; delete after it is used.
- B. Upload an Excel spreadsheet with the data into the Files tab.
- C. Create an external object that maps to the inventory application.
- D. Build a Lightning component and use SFDX to connect to the inventory app.

Answer: C

Explanation:

To make inventory data from a legacy application available in Salesforce, the administrator can create an external object that maps to the inventory application. An external object is similar to a custom object, except that it maps to data that's stored outside your Salesforce organization. External objects enable users to view and report on external data in Salesforce. References:

NEW QUESTION # 48

Ursa Major Solar (UMS) wants to improve its customers' ability to search for knowledge articles. UMS has already created categories for articles.

Which two additional changes should be made to improve search capabilities?

Choose 2 answers

- A. Configure Einstein Search for specific search terms.
- B. Configure Global Search for specific search terms.
- C. Promote specific search terms for specific articles.
- D. Create synonyms for specific search terms.

Answer: C,D

Explanation:

Knowledge is a feature that allows administrators to create, manage, and share articles that provide information and solutions for common issues or questions. Knowledge articles can be searched by users using keywords or phrases.

To improve its customers' ability to search for knowledge articles, UMS can use two options:

* B) Create synonyms for specific search terms.

Synonyms are words or phrases that have the same or similar meanings, such as "TV" and "television" or

"fix" and "repair". By creating synonyms for specific search terms, administrators can ensure that customers can find relevant articles even if they use different words or spellings than the ones used in the articles.

References: https://help.salesforce.com/s/articleView?id=sf.knowledge_search_synonyms.htm&type=5

* D) Promote specific search terms for specific articles.

Promoted search terms are keywords or phrases that administrators can associate with specific articles to boost their relevance and ranking in search results. By promoting specific search terms for specific articles, administrators can ensure that customers can find the most helpful or popular articles for their queries.

NEW QUESTION # 49

An administrator is asked to create a report to calculate the year-over-year change in the dollar amount of a company's opportunities.

What reporting tool should be used to complete this request?

- A. A custom summary formula with PARENTGROUPVAL function
- B. A joined report with two report blocks for each year
- C. A custom summary formula with the PREVGROUPVAL function.
- D. A row-level formula to compare amounts grouped by year.

Answer: C

Explanation:

A custom summary formula is a formula that calculates values from summary fields in reports such as sums, averages, counts, etc. Custom summary formulas can use functions such as PREVGROUPVAL which returns the value of a field from the previous row at the same grouping level. By using a custom summary formula with the PREVGROUPVAL function, an administrator can create a report to calculate the year-over-year change in the dollar amount of a company's opportunities by subtracting the amount from the previous year from the amount from the current year and dividing by the amount from the previous year. References:
