New Information-Technology-Management Test Format - Certificate Information-Technology-Management Exam

We have seen that candidates who study with outdated Information-Technology-Management practice material don't get success and lose their resources. To save you from loss of money and time, BrainDumpsStore is offering a product that is specially designed to help you pass the WGU Information Technology Management QGC1 (Information-Technology-Management) exam on the first try. The WGU Information-Technology-Management Exam Dumps is easy to use and very easy to understand, ensuring that it is student-oriented. You can choose from 3 different formats available according to your needs. The 3 formats are desktop Information-Technology-Management practice test software, web-based Information-Technology-Management practice exam, and Information-Technology-Management dumps PDF format.

WGU Information Technology Management QGC1 Sample Questions (Q189-Q194):

NEW QUESTION # 189

Employees in different business levels need knowledge to effectively drive their work and decision-making.

Which term describes the trait of an IT leader to effectively translate perspectives at both a broad and corporate strategic level?

- A. Courage
- B. Breadth
- C. Coordinate
- **D. Systems thinking**

Answer: D

NEW QUESTION # 190

Which characteristic defines Vision in leadership?

- A. Assigning specific roles and responsibilities to employees
- B. Focusing consistently on daily operational tasks
- **C. Establishing goals that promote long-term growth**
- D. Implementing structured financial reporting procedures

Answer: C

Explanation:

Vision in leadership refers to the ability to set long-term goals and provide a clear direction that guides organizational growth and change. Leaders with vision inspire teams to work toward future objectives beyond immediate operational tasks.

Option A: Financial reporting is operational, not visionary.

Option B: Daily task focus reflects management, not vision.

Option C: Assigning roles is administrative, not strategic vision.

Therefore, Vision in leadership is defined as establishing goals that promote long-term growth.

NEW QUESTION # 191

What is a benefit of in-house development and maintenance of information technology systems?

- A. Utilizes state-of-the-art technological resources without having to acquire and maintain them
- **B. Creates a better quality workforce by combining both technical and business skills**
- C. Allows for the fastest development time and ability to scale to new demand levels
- D. Increases financial savings because it costs less than outsourcing the work

Answer: B

Explanation:

* Benefits of In-House Development and Maintenance:

* In-house teams gain deep knowledge of the organization's business processes, enabling better alignment between IT systems and

business needs.

* Combines technical expertise with business insights, resulting in a workforce that understands the company's unique challenges and opportunities.

* Why Other Options are Incorrect:

* A. Financial savings: In-house development often incurs higher costs due to salaries, training, and infrastructure.

* B. Utilizing state-of-the-art resources: This is typically a benefit of outsourcing, not in-house development.

* D. Fastest development time: In-house development is often slower compared to outsourcing due to limited resources.

References and Documents of Information Technology Management:

* "In-House vs. Outsourced Development: A Comparative Analysis" (Forrester).

* ITIL Service Design and Workforce Development (Axelos).

NEW QUESTION # 192

Which hacking method involves forging the from address so that replies go to an unintended audience?

- A. Hoaxes
- **B. Spoofing**
- C. Packet tampering
- D. Spyware

Answer: B

Explanation:

Definition of Spoofing:

Spoofing involves forging the "from" address in communications (e.g., emails) so that replies or interactions are misdirected.

Attackers use this method to impersonate trusted entities, steal sensitive information, or redirect responses to malicious actors.

Impact of Spoofing:

Misleads recipients into sharing sensitive information.

Often used in phishing and social engineering attacks.

Incorrect Options Analysis:

A . Packet tampering: Involves altering data packets during transmission.

C . Spyware: Refers to software that secretly monitors user activity.

D . Hoaxes: Refers to false warnings or scams, not address forgery.

and Documents of Information Technology Management:

"Email Security and Spoofing Prevention" (NIST Cybersecurity Framework).

ITIL Security Management Practices (Axelos).

NEW QUESTION # 193

What is the function of the Internet Protocol (IP) in the Transmission Control Protocol (TCP)/Internet Protocol (IP) stack?

- A. To encrypt data for secure transmission
- B. To ensure data packets are delivered in order
- **C. To direct data packets between devices**
- D. To provide a user interface for network applications

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In the TCP/IP model, the Internet Protocol (IP) operates at the network layer and is responsible for addressing and routing data packets between devices across interconnected networks. Its primary function is to determine how packets are sent from the source host to the destination host, using IP addresses to identify each device on the network.

IP handles:

Logical addressing: Assigns IP addresses so devices can be uniquely identified on a network.

Routing: Determines the best path through routers and networks for a packet to travel from sender to receiver.

Packet forwarding: Moves packets from one network segment to another based on destination IP addresses.

It is important to note that IP is connectionless and does not guarantee delivery, order, or error correction. These reliability functions are handled by TCP, which works in conjunction with IP.

Why the other options are incorrect:

A . To provide a user interface for network applications - This is handled by application layer protocols and software, not IP.

B . To encrypt data for secure transmission - Encryption is typically provided by security protocols such as TLS, IPsec, or application-level encryption, not by basic IP itself.

D . To ensure data packets are delivered in order - This is the role of TCP, which provides ordered, reliable delivery on top of IP's best-effort packet delivery.

Therefore, the function of IP in the TCP/IP stack is to direct data packets between devices using addressing and routing.
