Palo Alto Networks CloudSec-Pro Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Application Security: This domain covers security practices integrated throughout the software development lifecycle, including application security posture management, CI CD pipeline security, software composition analysis, IaC security, and secrets scanning. It also explores real-world application security use cases and scan management.
Topic 2	<ul style="list-style-type: none"> Cortex Fundamentals: This domain focuses on the core features of the Cortex Cloud platform, including indicator types, log management, asset inventory, compliance, and data protection. It also covers how to create reports and dashboards and how data sources are ingested into the platform.
Topic 3	<ul style="list-style-type: none"> Security Operations Center (SOC) Fundamentals: This domain covers the foundational components of a SOC, including team roles, tools, and technologies used in day-to-day security operations. It also addresses how AI ML and threat intelligence support incident response, categorization, and prioritization.
Topic 4	<ul style="list-style-type: none"> Cloud Posture Security: This domain examines the tools and practices used to assess and manage cloud security posture, spanning CSPM, KSPM, AI-SPM, and DSPM. It also covers agentless scanning, identity security, vulnerability management, unified compliance, and the role of Posture Security Management Modules.
Topic 5	<ul style="list-style-type: none"> Cloud Runtime Security: This domain addresses the protection of cloud workloads during active operation, covering cloud workload protection, detection and response, web application and API security, and vulnerability management. It also includes the processes involved in deploying and managing security agents.

Palo Alto Networks Cloud Security Professional Sample Questions (Q207-Q212):

NEW QUESTION # 207

The security team wants to enable the "block" option under compliance checks on the host. What effect will this option have if it violates the compliance check?

- A. The host will be taken offline.
- B. No containers will be allowed to start on that host.
- C. Additional hosts will be prevented from starting.
- D. Containers on a host will be stopped.

Answer: B

Explanation:

Enabling the "block" option under compliance checks on a host in Prisma Cloud signifies a strict enforcement policy, where any container that violates specified compliance checks will be prevented from starting on that host. This preventive measure is crucial for maintaining a secure and compliant cloud environment, ensuring that only containers that meet the organization's compliance and security standards are allowed to run. This approach aligns with Prisma Cloud's proactive security posture management, where potential risks are mitigated before they can impact the cloud environment.

NEW QUESTION # 208

What is the function of the external ID when onboarding a new Amazon Web Services (AWS) account in Prisma Cloud?

- A. It is a unique identifier needed only when Monitor & Protect mode is selected.
- B. It is the resource name for the Prisma Cloud Role.
- **C. It is a UUID that establishes a trust relationship between the Prisma Cloud account and the AWS account in order to extract data.**
- D. It is the default name of the PrismaCloudApp stack.

Answer: C

Explanation:

The external ID plays a crucial role when onboarding a new Amazon Web Services (AWS) account in Prisma Cloud. It serves as a UUID (Universally Unique Identifier) that establishes a trust relationship between the Prisma Cloud account and the AWS account. This trust relationship is essential for allowing Prisma Cloud to securely extract data and perform security monitoring and compliance checks within the AWS environment.

The use of an external ID ensures that Prisma Cloud can access the necessary information from the AWS account without compromising the security of the AWS account's credentials, adhering to the principle of least privilege and enhancing the overall security posture.

NEW QUESTION # 209

What is an example of an outbound notification within Prisma Cloud?

- **A. PagerDuty**
- B. Qualys
- C. Tenable
- D. AWS Inspector

Answer: A

Explanation:

Outbound notifications in Prisma Cloud refer to the integration with external systems or services for the purpose of alerting or incident management.

* Option D: PagerDuty is an example of an outbound notification within Prisma Cloud. PagerDuty is a popular incident response and alerting service that teams use to manage, track, and respond to incidents in real-time. Prisma Cloud's integration with PagerDuty allows organizations to automatically forward alerts from Prisma Cloud to PagerDuty, enabling streamlined incident management and response workflows.

References:

Prisma Cloud Integration Documentation: Provides instructions for integrating Prisma Cloud with various external services, including PagerDuty, to enhance alerting and incident management capabilities.

Incident Management Best Practices: Discusses strategies for effective incident management, highlighting the role of integrations with external alerting services like PagerDuty in improving response times and incident resolution.

NEW QUESTION # 210

Where are Top Critical CVEs for deployed images found?

- A. Defend # Vulnerabilities # Code Repositories
- **B. Monitor # Vulnerabilities # Vulnerabilities Explorer**
- C. Defend # Vulnerabilities # Images
- D. Monitor # Vulnerabilities # Images

Answer: B

Explanation:

https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin-compute/vulnerability_management/vuln_explorer

The top critical CVEs (Common Vulnerabilities and Exposures) for deployed images in Prisma Cloud can be found in the Vulnerabilities Explorer under the Monitor tab. This is where users can input the CVE of interest and get a filtered list of images impacted by that CVE. The Vulnerability Explorer provides a comprehensive view of the vulnerabilities, allowing users to see details such as risk score, CVE risk factors, environmental risk factors, and impacted packages¹. This tool is essential for identifying and managing vulnerabilities within your cloud environment, ensuring that all images pulled into deployments or test environments are properly identified and secured.

NEW QUESTION # 211

Which two statements are true about the differences between build and run config policies? (Choose two.)

- A. Run policies monitor resources, and check for potential issues after these cloud resources are deployed.
- B. Run policies monitor network activities in your environment, and check for potential issues during runtime.
- C. Build policies enable you to check for security misconfigurations in the IaC templates and ensure that these issues do not get into production.
- D. Build and Audit Events policies belong to the configuration policy set.
- E. Run and Network policies belong to the configuration policy set.

Answer: A,C

Explanation:

In the context of Prisma Cloud, Build and Run policies serve distinct purposes in securing cloud environments. Build policies are designed to evaluate Infrastructure as Code (IaC) templates before deployment. These policies help identify and remediate security misconfigurations in the development phase, ensuring that vulnerabilities are addressed before the infrastructure is provisioned. This proactive approach enhances security by preventing misconfigurations from reaching production environments.

On the other hand, Run policies are applied to resources that are already deployed in the cloud. These policies continuously monitor the cloud environment, detecting and alerting on potential security issues that arise in the runtime. Run policies help maintain the security posture of cloud resources by identifying deviations from established security baselines and enabling quick remediation of identified issues.

Both Build and Run policies are integral to a comprehensive cloud security strategy, addressing security concerns at different stages of the cloud resource lifecycle—from development and deployment to ongoing operation.
