If you have aspiration to be an IT specialist with considerable salary and work in big company, our ISACA exam dumps will make your dream closer. You just need to prepare AAISM real questions with one or two days and we will give your support in every steps of your IT test preparation if you have any problems and doubts to our AAISM Pdf Torrent.

## ISACA AAISM Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>AI Governance and Program Management: This section of the exam measures the abilities of AI Security Governance Professionals and focuses on advising stakeholders in implementing AI security through governance frameworks, policy creation, data lifecycle management, program development, and incident response protocols.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>AI Technologies and Controls: This section of the exam measures the expertise of AI Security Architects and assesses knowledge in designing secure AI architecture and controls. It addresses privacy, ethical, and trust concerns, data management controls, monitoring mechanisms, and security control implementation tailored to AI systems.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>AI Risk Management: This section of the exam measures the skills of AI Risk Managers and covers assessing enterprise threats, vulnerabilities, and supply chain risk associated with AI adoption, including risk treatment plans and vendor oversight.</li></ul>

# ISACA Advanced in AI Security Management (AAISM) Exam Exam Practice Dump Provide Best AAISM Study Questions

Our ISACA AAISM study guide in order to allow the user to form a complete system of knowledge structure, the qualification examination of test interpretation and supporting course practice organic reasonable arrangement together, the AAISM simulating materials let the user after learning the section, and each section between cohesion and is closely linked, for users who use the ISACA Advanced in AI Security Management (AAISM) Exam AAISM training quiz to build a knowledge of logical framework to create a good condition.

## ISACA Advanced in AI Security Management (AAISM) Exam Sample Questions (Q177-Q182):

### NEW QUESTION # 177

Which of the following would BEST ensure a proper business continuity plan (BCP) is in place for an AI solution?

- A. Enhancing monitoring and detection of model failures and anomalies
- B. Implementing access controls to protect the AI system from unauthorized use
- C. Increasing the detail of AI solution backup and restoration processes
- D. Testing the AI infrastructure failover mechanisms

**Answer: D**

Explanation:

Effective AI BCP requires validation through exercises and controlled failover tests to prove recovery objectives can be met in practice. Merely documenting backups (Option D), hardening access (Option B), or improving monitoring (Option A) does not confirm that the AI stack—data pipelines, feature stores, model registries, inference services, and dependent infrastructure—can actually fail over and recover within RTO

/RPO. AAISM prescribes periodic BCP/DR testing (including model artifact restoration, configuration reconstitution, dependency failover, and data pipeline continuity) to verify readiness and identify gaps before real incidents.

### NEW QUESTION # 178

An AI research team is developing a natural language processing model that relies on several open-source libraries. Which of the following is the team's BEST course of action to ensure the integrity of the software packages used?

- A. Retrain the model regularly to handle package and library updates
- B. Use the latest version of all libraries from public repositories
- C. Scan the packages and libraries for malware prior to installation
- D. Maintain a list of frequently used libraries to ensure consistent application in projects

**Answer: C**

Explanation:

AAISM's technical control guidance emphasizes that when using open-source libraries, the best safeguard for integrity is to scan the packages for malware before installation. This ensures that compromised or malicious code does not enter the AI system environment. Maintaining lists aids consistency but not security. Always using the latest versions may introduce unverified vulnerabilities. Retraining models addresses functionality but not software integrity. Therefore, the strongest protective measure is pre-installation malware scanning of open-source packages.

### NEW QUESTION # 179

Which of the following would BEST protect trade secrets related to AI technologies during their life cycle?

- A. Introducing watermarks when generating AI output
- **B. Restricting access to sensitive data**
- C. Enforcing trademark rights in AI systems
- D. Patenting AI algorithms along with data sets

**Answer: B**

Explanation:

Restricting access to sensitive data and artifacts (e.g., training data, feature stores, model weights, prompts, system designs) using least-privilege, segregation, encryption, and monitoring is the most effective way to protect trade secrets throughout the AI lifecycle. Patents require public disclosure, trademarks protect branding (not secrets), and output watermarks help provenance/abuse deterrence but do not secure underlying proprietary know-how.

### NEW QUESTION # 180

A model producing contradictory outputs based on highly similar inputs MOST likely indicates the presence of:

- A. Membership inference
- B. Poisoning attacks
- **C. Evasion attacks**
- D. Model exfiltration

**Answer: C**

Explanation:

The AAISM study framework describes evasion attacks as attempts to manipulate or probe a trained model during inference by using crafted inputs that appear normal but cause the system to generate inconsistent or erroneous outputs. Contradictory results from nearly identical queries are a typical symptom of evasion, as the attacker is probing decision boundaries to find weaknesses. Poisoning attacks occur during training, not inference, while membership inference relates to exposing whether data was part of the training set, and model exfiltration involves extracting proprietary parameters or architecture. The clearest indication of contradictory outputs from similar queries therefore aligns directly with the definition of evasion attacks in AAISM materials.

### NEW QUESTION # 181

When addressing privacy concerns related to AI, what is the GREATEST significance of user consent?

- **A. It allows the organization to process user data in the AI system**
- B. It enables deletion/modification of personal data
- C. It helps detect bias and ensure fairness
- D. It prevents unauthorized access to data

**Answer: A**

Explanation:

AAISM clarifies that the primary regulatory purpose of user consent is to provide lawful authorization for processing personal data, including use in AI models.

Consent does not directly prevent unauthorized access (A). Deletion rights (B) relate to data subject rights but are not the purpose of consent. Bias detection (D) is unrelated.
