Passing the Fortinet NSE6_FSR-7.3 certification exam is not a tough thing to do but we make it so. The main reason is that we don't know how to study from the NSE6_FSR-7.3 exam questions we have. We assume that we can study one night and can easily take the Fortinet NSE 6 - FortiSOAR 7.3 Administrator NSE6_FSR-7.3 Exam the next morning. This was possible only when we were the school. Now, it is not possible.

Fortinet NSE6_FSR-7.3 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• SOC and SOAR Overview: Security Engineers can gain an understanding of SOC and SOAR deployment requirements, including licensing management for FortiSOAR.
Topic 2	<ul style="list-style-type: none">• System Configuration: FortiSOAR requires careful setup of applications for FortiSoar System Administrators. It covers system fixtures, and proxy settings to function optimally.
Topic 3	<ul style="list-style-type: none">• Security Management: This section covers how Security Engineers implement role-based access control (RBAC) and set up team structures within FortiSOAR to streamline security management.
Topic 4	<ul style="list-style-type: none">• System Operation: For System Engineers, this section covers Elasticsearch data management that may need to be externalized or migrated to accommodate system needs. Additionally, this section covers configuring the recommendation engine and utilizing the war room functionality.
Topic 5	<ul style="list-style-type: none">• System Monitoring and Maintenance: For FortiSOAR Administrators, this domain covers using various tools for system monitoring to ensure consistent performance. This includes how to regularly oversee FortiSOAR processes, along with other critical functions.

2026 Professional NSE6_FSR-7.3 Examinations Actual Questions | Fortinet NSE 6 - FortiSOAR 7.3 Administrator 100% Free Latest Exam Camp

The PremiumVCEDump is committed to making the Fortinet NSE6_FSR-7.3 certification exam preparation simple, smart, and successful. To achieve this objective PremiumVCEDump is offering top-notch and real NSE6_FSR-7.3 exam questions in three different formats. The names of these Fortinet NSE 6 - FortiSOAR 7.3 Administrator (NSE6_FSR-7.3) exam questions formats are PDF files, desktop practice test software, and web-based NSE6_FSR-7.3 practice test software.

Fortinet NSE 6 - FortiSOAR 7.3 Administrator Sample Questions (Q19-Q24):

NEW QUESTION # 19

An administrator wants to collect and review all FortiSOAR log files to troubleshoot an issue. Which two methods can they use to accomplish this? (Choose two.)

- A. Enter the `csacta services -status` command, and then copy the output.
- B. Enter the `caacta log --collect directory` command.
- C. Download the logs from the GUI.
- D. Review the contents of `/var/log/messages`.

Answer: B,C

Explanation:

Administrators can collect and review FortiSOAR logs for troubleshooting in two primary ways. First, they can download logs directly from the GUI, which provides access to various logs through an intuitive interface.

Secondly, using the command-line interface, the `csacta log --collect` command can be used to gather all logs within a specified directory, enabling more detailed offline analysis. Both methods offer comprehensive log collection to aid in diagnosing and resolving issues.

NEW QUESTION # 20

Which three features are installed with the FortiSOAR Incidence Response Content Pack? (Choose three answers)

- A. SLA template module
- B. Sample data for playbooks
- C. System monitoring connectors1
- D. Sample alerts and incidents
- E. System playbooks2

Answer: B,D,E

Explanation:

Comprehensive and Detailed Explanation From FortiSOAR 7.3 Exact Extract study guide:

The FortiSOAR Incidence Response Content Pack (which is essentially the predecessor or foundational component of the SOAR Framework Solution Pack in version 7.3) is designed to provide users with an immediate, functional environment. According to the FortiSOAR 7.3 Administration Guide and Content Hub documentation:

* Sample Alerts and Incidents (C):The content pack includes a set of demo records.³Upon installation and clicking the "Demo IR Records" button, the system populates the Alerts and Incidents modules with pre-configured samples, including associated indicators and assets, to demonstrate how records are handled.⁴

* System Playbooks (D):It installs a comprehensive collection of "out-of-the-box" (OOB) playbooks.

These include system-level playbooks used for triaging, indicator extraction, and managing standard record lifecycles (such as auto-populating dates when a record is closed).⁵

* Sample Data for Playbooks (B):Along with the records themselves, the pack includes simulation and training data (often referred to as "Playbook Samples" or "Mock Data").⁶This allows administrators to test playbook logic and workflows without requiring live feeds from third-party security tools.

Why other options are incorrect:

* System monitoring connectors (A):While the pack may configure some basic internal connectors (like the Code Snippet connector), "system monitoring connectors" are generally standalone integrations or part of specific device solution packs rather than

the core IR pack.

* SLA template module (E): Although the pack includes playbooks that manage SLAs (calculating response and resolution times), the "SLA Management" or "SLA Template" capability is often categorized as an additional module or handled via the Module Editor, rather than being a specific "feature" installed solely by the IR pack.

NEW QUESTION # 21

Refer to the exhibit.

The screenshot displays the configuration interface for the SMTP service in FortiSOAR. The 'Service' dropdown is set to 'SMTP'. The 'Email' field contains 'csadmin@internal.lab'. The 'Monitoring Interval (Minutes)' is set to 5. Under 'System Health Thresholds', the following values are configured: Memory Utilization (%) at 80, CPU Utilization (%) at 80, Disk Utilization (%) at 80, Swap Memory Utilization (%) at 50, Workflow Queue Threshold at 100, and WAF File Size (GB) at 20. Under 'Cluster Health', the 'Missed Heartbeat Count' and 'Replication Lag (GB)' are both set to 3.

How long after the syops-ha service goes down will the heartbeat missed notification be sent to the administrator?

- A. 15 minutes
- B. 3 minutes
- C. 60 minutes
- D. 5 minutes

Answer: C

Explanation:

In FortiSOAR's high availability (HA) setup, if the cyops-ha service becomes unresponsive, the system is configured to send a "heartbeat missed" notification after a specified period, which in this case is 60 minutes.

This delay allows for transient issues to be resolved without triggering immediate alerts, while also ensuring that administrators are informed of prolonged service disruptions. Timely notifications about the cyops-ha service's status help maintain the reliability and responsiveness of the HA environment.

NEW QUESTION # 22

A security analyst has reported unauthorized access to System Configuration. You must review the user's current level of access, and then restrict their access according to your organization's requirements. As part of your auditing process, which two actions should you perform? (Choose two.)

- A. View the user's effective role permissions, and then investigate which role is providing that access.
- B. Remove all record ownership that is assigned to the user.

- C. Review the user's team hierarchy to ensure that the appropriate relationships are configured.
- D. Remove the create, read, update, and delete (CRUD) permissions or roles that the user does not require.

Answer: A,C

Explanation:

To audit and restrict a user's access within FortiSOAR, particularly in response to unauthorized access reports, it's necessary to review the user's effective role permissions. This involves checking which roles grant the user access to the System Configuration module and adjusting as needed. Additionally, reviewing the user's team hierarchy ensures that the user's access aligns with the organization's policies. Misconfigurations in team relationships can sometimes inadvertently provide elevated access; hence, confirming that the team setup is correct is a critical part of the auditing process.

NEW QUESTION # 23

Which log file contains license synchronization logs on FortiSOAR?

- A. celery.log
- B. fdn.log
- C. falcon.log
- D. beat.log

Answer: B

Explanation:

The fdn.log file in FortiSOAR contains logs related to license synchronization activities. This log file records events and errors associated with license checks and synchronization with Fortinet's licensing servers, ensuring that the FortiSOAR instance remains compliant with licensing requirements. Monitoring fdn.log can help administrators troubleshoot issues related to license synchronization and ensure the system operates within the licensed limits.
