

# Newly SC-500 Exam Dumps [2026] For Massive Achievement

Our ExamBoosts provides SC-500 braindumps and training materials in PDF and software, which contains SC-500 exam dumps and answers. Moreover, the content of SC-500 braindumps and training materials covers largely and more reliably, and it will help you most to prepare SC-500 test. If you fail the SC-500 certification exam with our SC-500 dumps, please don't worry. We will refund fully.

ExamBoosts offers actual Implementing End-to-End Security Controls for Cloud and AI Workloads Exam Questions that make your success possible on the first try. ExamBoosts has helped many customers gain high scores. Before purchasing, you can download and try any SC-500 Exam Questions format. Implementing End-to-End Security Controls for Cloud and AI Workloads SC-500 with excellent pass rate.

## New Release Microsoft SC-500 Dumps To Get Excellent Marks In Exam 2026

If you want to avoid being eliminated by machine, you must constantly improve your ability in all aspects. The emergence of SC-500 dumps torrent provides you with a very good chance to improve yourself. On the one hand, our SC-500 quiz torrent can help you obtain professional certificates with high quality in any industry without any difficulty. On the other hand, SC-500 Exam Guide can give you the opportunity to become a senior manager of the company, so that you no longer engage in simple and repetitive work, and you will never face the threat of layoffs.

## Microsoft Implementing End-to-End Security Controls for Cloud and AI Workloads Sample Questions (Q19-Q24):

### NEW QUESTION # 19

You have a Microsoft Entra tenant that contains the users shown in the following table.

Name	Role
User1	Security Copilot Contributor
User2	Global Administrator
User3	Security Administrator
User4	Security Copilot Owner

You use Microsoft Security Copilot.

From Microsoft Security Store, User1 attempts to deploy a partner built agent named Agent1 and reports that the Get agent option is unavailable.

You need to identify whether Agent1 can run in Security Copilot successfully. The solution must follow the principle of least privilege.

How should you complete the deployment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

To complete approval for Agent1:

- Instruct User4 to approve Agent1.
- Instruct User1 to approve Agent1.
- Instruct User2 to approve Agent1.
- Instruct User3 to approve Agent1.
- Instruct User4 to approve Agent1.

To complete the agent setup:

- Create an app registration for Agent1.
- Create an app registration for Agent1.
- Create a managed identity for Agent1.
- Create an enterprise application for Agent1.
- Create a custom plugin for Agent1.

**Answer:**

Explanation:

To complete approval for Agent1:

- Instruct User4 to approve Agent1.
- Instruct User1 to approve Agent1.
- Instruct User2 to approve Agent1.
- Instruct User3 to approve Agent1.
- Instruct User4 to approve Agent1.

To complete the agent setup:

- Create an app registration for Agent1.
- Create an app registration for Agent1.
- Create a managed identity for Agent1.
- Create an enterprise application for Agent1.
- Create a custom plugin for Agent1.

Explanation:

**Answer Area**

To complete approval for Agent1: Instruct User4 to approve Agent1.

To complete the agent setup: Create an app registration for Agent1.

To complete approval for Agent1: Instruct User4 to approve Agent1; To complete the agent setup:

Create an app registration for Agent1

Security Store partner-built agents require organization-level approval before contributors can acquire and use them. User4 is the Security Copilot Owner, so User4 is the least-privilege approver among the listed accounts.

The agent also needs an app registration so the agent identity and permissions can be represented through Microsoft Entra. Global Administrator could approve many things, but using the Security Copilot Owner avoids unnecessary tenant-wide privilege for this operational approval. This answer also follows operational scalability. Microsoft security architecture favors policy-driven deployment, agentless assessment, managed identities, and Defender workload plans where possible. Those mechanisms reduce

manual configuration while keeping enforcement tied to the resource type, which is why the selected choice is stronger than manual or after-the-fact alternatives. The result is a direct exam-style implementation choice: it changes the required security behavior without relying on unrelated monitoring, manual cleanup, or excessive privilege. Official Microsoft source/topic: SC-500 Study Guide > Microsoft Security Copilot agents; Microsoft Learn > Security Store agent approval and app registration.

**NEW QUESTION # 20**

Drag and Drop Question

You have a Microsoft 365 subscription.

You use Microsoft Entra Agent ID to manage an agent identity.

You manage AI agents from the Microsoft 365 admin center.

An autonomous agent named Agent1 runs without a signed-in user. The agent must access Microsoft Graph and read secrets from a single Azure key vault.

You need to grant Agent1 access to Microsoft Graph and Key Vault without requiring user interaction or consent at runtime.

What should you do for the agent identity? To answer, drag the appropriate actions to the correct services. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

**NEW QUESTION # 21**

You have a Microsoft Entra tenant.

You need to implement password less authentication. The solution must meet the following requirements:

\*Users can sign in without a password by using a mobile device.

\*New users that sign in for the first time must use a helpdesk issued sign in method that expires.

Which authentication method should you enable for each requirement? To answer, drag the appropriate methods to the correct requirements. Each method may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

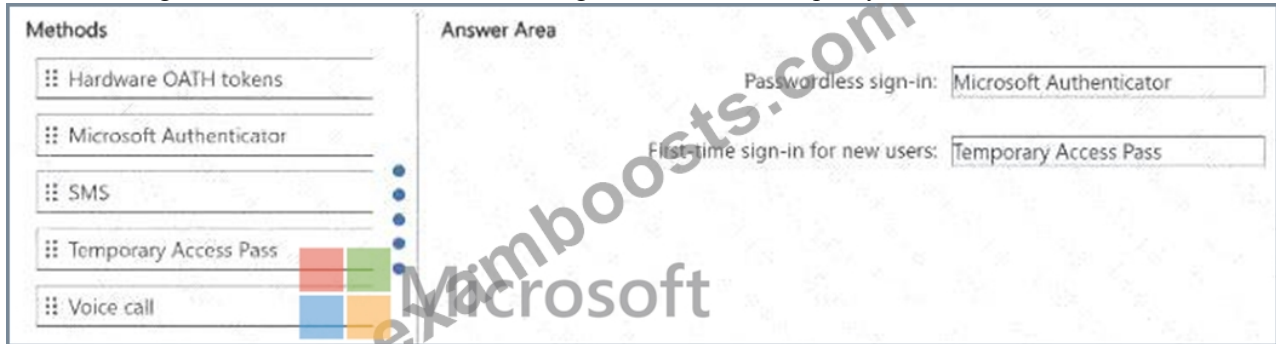

**Answer:**

Explanation:

Explanation:

Passwordless sign-in: Microsoft Authenticator; First-time sign-in for new users: Temporary Access Pass

Microsoft Authenticator supports passwordless phone sign-in, allowing users to authenticate from a mobile device without typing a password. Temporary Access Pass is a time-limited, helpdesk-issued credential designed for onboarding or recovery, so it fits first-time sign-in for new users. SMS and voice call are authentication methods but are not passwordless sign-in methods in the same strong sense, and hardware OATH tokens are not the requested mobile-device experience. For SC-500, the decisive distinction is whether the control authenticates an identity, grants authorization, or merely changes configuration visibility. The incorrect choices generally either grant excessive privilege, change the application model, or operate at the wrong scope. Microsoft expects the least-privilege identity path that satisfies the scenario without introducing shared secrets or unnecessary tenant-wide rights. The result is a direct exam-style implementation choice: it changes the required security behavior without relying on unrelated monitoring, manual cleanup, or excessive privilege. Official Microsoft source/topic: SC-500 Study Guide > passwordless authentication methods; Microsoft Learn > Microsoft Authenticator and Temporary Access Pass.

### NEW QUESTION # 22

You have an Azure subscription named Sub1 that contains a storage account named storage1.

Sub1 has Microsoft Defender for Storage enabled. Defender for Storage has on-upload malware scanning enabled for a monthly cap of 10,000 GB per storage account.

You use a Microsoft Sentinel workspace to monitor security events on all Azure resources.

You need to configure storage1 to use a malware scanning cap of 2,000 GB per month.

What should you do?

- A. From Microsoft Sentinel, modify the data collection rule (DCR) to restrict log ingestion from storage1.
- B. Enable the Override Defender for Storage subscription-level settings for storage1.
- C. From the Microsoft Sentinel workspace, modify the daily cap.
- D. Modify the malware scanning configuration of Sub1.

**Answer: B**

Explanation:

Defender for Storage settings can be overridden for an individual storage account when the subscription-level configuration applies a different malware scanning cap. Enabling the override for storage1 allows its on-upload malware scanning monthly cap to be changed to 2,000 GB while the subscription-level 10,000-GB setting continues to apply to other storage accounts.

### NEW QUESTION # 23

You have an Azure virtual network named VNet1 that contains an Azure Bastion Subnet. VNet1 contains a subnet named Subnet1. Subnet1 contains multiple virtual machines.

You plan to deploy Azure Bastion to provide secure RDP access to the virtual machines on Subnet1. You associate a network

security group (NSG) named NSG1 to Azure Bastion Subnet.

You need to configure rules for NSG1. The solution must meet the following requirements:

\*Allow required inbound access to Azure Bastion from the internet.

\*Allow user access to the virtual machines by using Azure Bastion.

Which TCP ports should you allow for the NSG1 rules? To answer, drag the appropriate ports to the correct rules. Each port may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

The screenshot shows the 'TCP Ports' pane on the left with a list of ports: 21, 22, 389, 443, 3389, and 8080. The 'Answer Area' on the right has two fields: 'Inbound from the internet' and 'Outbound to Subnet1'. The Microsoft logo is visible at the bottom.

**Answer:**

Explanation:

The screenshot shows the 'TCP Ports' pane on the left with a list of ports: 21, 22, 389, 443, 3389, and 8080. The 'Answer Area' on the right has two fields: 'Inbound from the internet' set to 443 and 'Outbound to Subnet1' set to 3389. The Microsoft logo is visible at the bottom.

Explanation:

Inbound from the internet: 443; Outbound to Subnet1: 3389

The screenshot shows the 'TCP Ports' pane on the left with a list of ports: 21, 22, 389, 443, 3389, and 8080. The 'Answer Area' on the right has two fields: 'Inbound from the internet' set to 443 and 'Outbound to Subnet1' set to 3389. The Microsoft logo is visible at the bottom.

Azure Bastion requires inbound HTTPS access on TCP 443 from the internet to the AzureBastionSubnet so users can reach the Bastion service. For RDP to Windows virtual machines, Bastion then needs outbound access to the target subnet on TCP 3389. Port 22 would be required for SSH, but the scenario is specifically secure RDP. Other listed ports do not satisfy Bastion RDP access requirements. For this domain, least privilege means granting only the required data operation or allowing only the required network flow. The correct response avoids shared keys, broad peering, general contributor roles, or log-only controls when the scenario demands prevention, routing, event triggering, or account-specific configuration. The result is a direct exam-style implementation choice: it changes the required security behavior without relying on unrelated monitoring, manual cleanup, or excessive privilege. Official Microsoft source/topic: SC-500 Study Guide > Azure Bastion; Microsoft Learn > Azure Bastion NSG access and port requirements.

**NEW QUESTION # 24**

.....

Our product's passing rate is 99% which means that you almost can pass the test with no doubts. The reasons why our SC-500 Test Guide's passing rate is so high are varied. Firstly, our test bank includes two forms and they are the PDF test questions which are selected by the senior lecturer, published authors and professional experts and the practice test software which can test your mastery degree of our Implementing End-to-End Security Controls for Cloud and AI Workloads study question at any time. The two forms cover the syllabus of the entire test. Our questions and answers include all the questions which may appear in the exam and all the approaches to answer the questions. So we provide the strong backing to help clients to help them pass the test.
