- A. date the monthly update is performed
- B. date the project manager turns in the schedule update
- C. date on which progress is based
- D. system date when the software calculates the update

Answer: C

Explanation:

Evaluation of Options:
Option A: Incorrect. It's not tied to monthly updates.
Option B: Incorrect. The status date is not when the project manager submits updates.

NEW QUESTION # 188
During proofing of the product manual, a problem was discovered requiring 15 days additional time to effect a correction. How can the date of availability be maintained?

- A. Delay manufacturing by 5 days.
- B. Delay product release by 5 days.
- C. Expedite printing by 5 days.
- D. Expedite packaging by 5 days.

Answer: C

Explanation:
* Situation Analysis:
Proofing of the product manual requires 15 additional days.
This impacts the Print Product Manual (Activity F), which is a critical path activity.
* Maintaining the Availability Date:
To prevent delays in the product release (Activity H), the additional 15 days for proofing must be offset.
Reducing the printing duration (Activity F) by 5 days ensures the schedule stays on track.
Expediting other activities like manufacturing or packaging would not directly compensate for the proofing delay.

* Cross-Verification:
Option A: Incorrect. Delaying product release impacts availability.
Option B: Incorrect. Packaging is not a direct predecessor of the product release.
Option D: Incorrect. Delaying manufacturing has no impact on proofing.
Option C: Correct. Expedites the critical path by compensating for the delay.
