

Reliable 350-701 Test Practice, Examinations 350-701 Actual Questions

2026 Latest itPass4sure 350-701 PDF Dumps and 350-701 Exam Engine Free Share: <https://drive.google.com/open?id=1wKeqmlQGRmwEmQCjLSVIts0fc75Zp-dH>

In recent years, our 350-701 test torrent has been well received and have reached 99% pass rate with all our dedication. As a powerful tool for a lot of workers to walk forward a higher self-improvement, our 350-701 certification training continue to pursue our passion for advanced performance and human-centric technology. A good deal of researches has been made to figure out how to help different kinds of candidates to get 350-701 Certification. We revise and update the Implementing and Operating Cisco Security Core Technologies guide torrent according to the changes of the syllabus and the latest developments in theory and practice.

Cisco 350-701 is an exam that tests the knowledge of individuals in implementing and operating Cisco Security Core Technologies. 350-701 exam focuses on various security technologies, including network security, cloud security, content security, endpoint protection and detection, and secure network access. 350-701 exam is an essential requirement for individuals who want to earn the CCNP Security certification.

Cisco 350-701 exam is designed to test the skills and knowledge of professionals who are responsible for implementing and managing security solutions in their organizations. 350-701 Exam is ideal for security professionals, network engineers, and IT managers who want to enhance their knowledge and skills in Cisco security technologies. 350-701 exam validates a candidate's ability to configure, implement, and manage security solutions using Cisco technologies.

Examinations 350-701 Actual Questions | Valid 350-701 Test Registration

The itPass4sure team regularly updates the 350-701 exam pdf format to make sure that applicants receive the most up-to-date Cisco 350-701 exam questions. Additionally, our 350-701 PDF is designed to be user-friendly and accessible on any smart device, which means that students can prepare for the 350-701 from anywhere, at any time.

Cisco 350-701: Implementing and Operating Cisco Security Core Technologies is an industry-recognized certification exam that tests the candidate's knowledge and skills in implementing and operating core security technologies of Cisco. 350-701 Exam is designed to validate the candidate's expertise in implementing and managing Cisco's security solutions to protect their organization's network infrastructure from potential threats.

Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q264-Q269):

NEW QUESTION # 264

What are two differences between a Cisco Secure Web Appliance that is running in transparent mode and one running in explicit

mode? (Choose two.)

- A. The Cisco Secure Web Appliance is configured in a web browser only if it is running in transparent mode.
- B. The Cisco Secure Web Appliance responds with its own IP address only if it is running in explicit mode.
- C. The Cisco Secure Web Appliance uses a Layer 3 device to redirect traffic only if it is running in transparent mode.
- D. When the Cisco Secure Web Appliance is running in transparent mode, it uses the Secure Web Appliance's own IP address as the HTTP request destination.
- E. The Cisco Secure Web Appliance responds with its own IP address only if it is running in transparent mode.

Answer: B,C

NEW QUESTION # 265

Which two deployment modes does the Cisco ASA FirePOWER module support? (Choose two)

- A. active mode
- B. passive monitor-only mode
- C. transparent mode
- D. inline mode
- E. routed mode

Answer: A,D

Explanation:

Explanation You can configure your ASA FirePOWER module using one of the following deployment models: You can configure your ASA FirePOWER module in either an inline or a monitor-only (inline tap or passive) deployment. Reference: <https://www.cisco.com/c/en/us/td/docs/security/asa/asa92/asdm72/firewall/asa-firewall-asdm/modules-sfr.html> You can configure your ASA FirePOWER module using one of the following deployment models:

You can configure your ASA FirePOWER module in either an inline or a monitor-only (inline tap or passive) deployment.

Reference:

Explanation You can configure your ASA FirePOWER module using one of the following deployment models: You can configure your ASA FirePOWER module in either an inline or a monitor-only (inline tap or passive) deployment. NEW QUESTION # 266

An engineer integrates Cisco FMC and Cisco ISE using pxGrid Which role is assigned for Cisco FMC?

- A. publisher
- B. controller
- C. server
- D. client

Answer: D

Explanation:

Cisco FMC is assigned the role of a client in the pxGrid ecosystem. A client is a partner that subscribes to the contextual data published by other partners or by ISE. A client can also publish its own data, but it does not have to. A client can use the contextual data to enforce security policies, perform threat analysis, or provide visibility. Cisco FMC can subscribe to various topics from ISE or other partners, such as user identity, session directory, endpoint profile, SGT mapping, threat events, or vulnerability assessment. Cisco FMC can also publish its own threat events to ISE or other partners. Cisco FMC can use the contextual data to apply access control rules, correlation policies, or network discovery policies based on the attributes of the users, endpoints, or sessions¹². The other options are not correct because they are not the roles assigned for Cisco FMC. A server is a partner that publishes contextual data to other partners or to ISE. A server can also subscribe to data, but it does not have to. A server can provide valuable information about the network, such as device inventory, configuration, or compliance. An example of a server is Cisco Prime Infrastructure³. A controller is the core component of the pxGrid ecosystem that manages the communication, authentication, and authorization between the partners. The controller is always ISE, and it is responsible for creating and maintaining the pxGrid domain, distributing the certificates, and facilitating the data exchange⁴. A publisher is a partner that publishes contextual data to other partners or to ISE, but does not subscribe to any data. A publisher can provide useful information about the network, such as security events, alerts, or incidents. An example of a publisher is Cisco Stealthwatch. References :=

NEW QUESTION # 267

An engineer has enabled LDAP accept queries on a listener. Malicious actors must be prevented from quickly identifying all valid recipients. What must be done on the Cisco ESA to accomplish this goal?

- A. Use Bounce Verification
- B. Configure incoming content filters.
- C. **Configure Directory Harvest Attack Prevention**
- D. Bypass LDAP access queries in the recipient access table.

Answer: C

Explanation:

Reference:

How do you create an LDAP group query on the ESA?

1. Create an LDAP group query under System Administration > LDAP
2. Enable the group query for the listener under Network > Listener > {select the listener} > select the LDAP group query.
3. Go to Incoming Mail Policies.
4. Create a new policy for the group.
5. Add in the recipient matching the group.
6. Choose LDAP group query instead of email.
7. Select group query and put in the matching group name.
8. **Configure new incoming mail policies:** Anti-Spam, Anti-Virus, Content Filters, and Virus Outbreak Filters.

NEW QUESTION # 268

What is a feature of Cisco NetFlow Secure Event Logging for Cisco ASAs?

- A. Secure NetFlow connections are optimized for Cisco Prime Infrastructure
- B. Multiple NetFlow collectors are supported
- C. Flow-create events are delayed
- D. **Advanced NetFlow v9 templates and legacy v5 formatting are supported**

Answer: D

Explanation:

Explanation:

The ASA and ASASM implementations of NetFlow Secure Event Logging (NSEL) provide the following major functions:

...

- Delays the export of flow-create events.
