Adobe Experience Manager DevOps Engineer Expert Sample Questions (Q64-Q69):

NEW QUESTION # 64

A DevOps engineer notices very high CPU usage on the server after a major content deployment. After inspecting the server's error log, the DevOps engineer is unable to identify the cause of the CPU spike and creates a Support Case via the Admin Console. Which information must be provided in the ticket?

- A. Bundle list
- B. Threads via Jstack

- C. Heaps via Jmap
- D. Sling metrics

Answer: B

NEW QUESTION # 65

A customer wants duplicate assets detected regardless of filenames as they upload to AEM Asset.

How should the DevOps engineer set up the configuration?

- A. In the ui.apps project, locate the config folder that targets the runmode and create a new <PID>.cfg.json file in /apps with the following:

```
{
  "detect_duplicate":true,
  "detectMetadataField":"damsha1"
}
```
- B. In the ui.config project, locate the /conf/global/settings/dam folder that targets the runmode and create a new <PID>.cfg.json file in /config/dam with the following:

```
{
  "enabled":true,
  "detectMetadataField":"damsha1"
}
```
- C. In the ui.apps project, locate the config folder that targets the runmode and create a new <PID>.cfg.json file in /apps with the following:

```
{
  "enabled":true,
  "detectMetadataField":"damsha1"
}
```
- D. Enable duplicate detection using /etc/metadata configurations

Answer: C

NEW QUESTION # 66

A DevOps engineer notices that a system occasionally gets slower.

- * No deployment has been recently performed.
- * After a restart of the instance, the performance degradation is mitigated.
- * If no action is taken, the JVM tends to crash in an unpredictable manner with Out Of Memory exceptions.
- * There is no clear correlation between visitor peaks and crashes of the instances.
- * The same symptoms affect author and publish instances.

What is causing this issue?

- A. There are too many concurrent users.
- B. The data store used is not appropriate.
- C. JCR sessions are not closed properly.
- D. The access rights strategy has too many groups and too many ACLs.

Answer: C

Explanation:

Unclosed JCR sessions are a classic cause of memory leaks in AEM applications. When custom backend code opens a JCR Session or ResourceResolver but fails to close it within a finally block, the garbage collector cannot reclaim that memory. Over time, these open sessions accumulate in the heap memory, causing the system to slow down and eventually leading to unpredictable OutOfMemory (OOM) crashes. Restarting the instance clears the heap, temporarily mitigating the issue until the unclosed sessions build up again. This issue is agnostic of visitor peaks or runmodes (author/publish).

NEW QUESTION # 67

During the Non-Production pipeline, an issue occurs with a Security Rating of B.

Based on the Review Results, all critical and mandatory tests passed.

What should the DevOps engineer do to proceed with the build?

- **A. Switch on Override failed results and submit.**
- B. Reconfigure the pipeline to pull from another branch.
- C. Bypass testing for security and proceed to performance.
- D. Reject the deployment and restart it again.

Answer: A

Explanation:

Similar to Code Coverage, a Security Rating of 'B' in Cloud Manager usually results in a "Partial Pass" state (3-tier rating system where critical vulnerabilities cause outright failures, but lower-tier warnings cause partial passes). Since all critical and mandatory tests passed, the pipeline pauses and waits for user intervention. The DevOps engineer (with the Deployment Manager role) can proceed with the build by navigating to the execution details, selecting the option to "Override failed results," and submitting the decision to resume the pipeline.

NEW QUESTION # 68

The development team needs to scale up their infrastructure and add an additional development environment to the CI/CD pipeline. The contract has been amended to allow for the additional environment. The DevOps engineer is expected to provision and include the environment into the pipeline.

What should the DevOps engineer do?

- A. Open a support ticket via the support portal and request an additional development environment to be provisioned in the same region as the other environments.
- **B. Click on Add Environment in the Cloud Manager UI, define the environment type as development, and choose the region matching the other environments.**
- C. Using the Developer Console within Cloud Manager, clone the current developer environment and re-assign the secret variables to cater for two developer environments.
- D. Use the Admin Console to provision a new development environment.

Answer: B
