

Efficient and Convenient Preparation with Prep4away's Updated Oracle 1Z0-1084-25 Exam Dumps

DOWNLOAD the newest Prep4away 1Z0-1084-25 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1Hst0PZrqG2EXpEYZLDrYYNyXc4wEaV95>

After you visit the pages of our 1Z0-1084-25 test torrent on the websites, you can know the version of the product, the updated time, the quantity of the questions and answers, the characteristics and merits of the Oracle Cloud Infrastructure 2025 Developer Professional guide torrent, the price of the product and the discounts. In the pages of our product on the website, you can find the details and guarantee and the contact method, the evaluations of the client on our 1Z0-1084-25 Test Torrent and other information about our product. So it is very convenient for you.

Our 1Z0-1084-25 study materials are the hard-won fruit of our experts with their unswerving efforts in designing products and choosing test questions. Pass rate is what we care for preparing for an examination, which is the final goal of our 1Z0-1084-25 study materials. According to the feedback of our users, we have the pass rate of 99%, which is equal to 100% in some sense. The high quality of our products also embodies in its short-time learning. You are only supposed to practice 1Z0-1084-25 Study Materials for about 20 to 30 hours before you are fully equipped to take part in the examination.

Pass Guaranteed Quiz Accurate Oracle - 1Z0-1084-25 New Real Test

Do you feel bored about current jobs and current life? Go and come to obtain a useful certificate! 1Z0-1084-25 study guide is the best product to help you achieve your goal. If you pass exam and obtain a certification with our 1Z0-1084-25 study materials, you can apply for satisfied jobs in the large enterprise and run for senior positions with high salary and high benefits. Excellent Oracle 1Z0-1084-25 Study Guide make candidates have clear studying direction to prepare for your test high efficiently without wasting too much extra time and energy.

Oracle Cloud Infrastructure 2025 Developer Professional Sample Questions (Q96-Q101):

NEW QUESTION # 96

Which TWO are part of the Cloud Native Computing Foundation (CNCF) container runtime? (Choose two.)

- A. containerd
- B. runc
- C. getcd
- D. rkt-o

Answer: A,B

Explanation:

The two components that are part of the Cloud Native Computing Foundation (CNCF) container runtime are: containerd: containerd is an open-source container runtime that provides a runtime environment for containers, including managing container images, executing containers, and handling container lifecycle events. It is designed to be lightweight and extensible, providing the necessary functionality to run containers efficiently. runc: runc is a lightweight container runtime that serves as a reference implementation of the Open Container Initiative (OCI) runtime specification. It is responsible for launching and managing containers based on OCI specifications, including handling container isolation, namespaces, cgroups, and other low-level container operations. These two components, containerd and runc, are widely used in the container ecosystem and are part of the CNCF's efforts to promote and develop open-source technologies for cloud-native computing.

NEW QUESTION # 97

What is the difference between continuous delivery and continuous deployment in the DevOps methodology? (Choose the best answer.)

- A. Continuous delivery utilizes automatic deployment to a development environment, whereas continuous deployment involves automatic deployment to a production environment.
- B. Continuous delivery is a process that Initiates deployment manually, whereas continuous deployment is based on automating the deployment process.
- C. Continuous delivery requires automatic linting, whereas continuous deployment testing must be run manually.
- D. Continuous delivery involves automation of developer tasks, whereas continuous deployment involves manual operational tasks.

Answer: A

Explanation:

The two correct differences between continuous delivery and continuous deployment in the DevOps lifecycle are: Continuous delivery is a process that initiates deployment manually, while continuous deployment is based on automating the deployment process. In continuous delivery, the software is ready for deployment, but the decision to deploy is made manually by a human. On the other hand, continuous deployment automates the deployment process, and once the software passes all the necessary tests and quality checks, it is automatically deployed without human intervention. Continuous delivery utilizes automatic deployment to a development environment, while continuous deployment involves automatic deployment to a production environment. In continuous delivery, the software is automatically deployed to a development or staging environment for further testing and validation. However, the actual deployment to the production environment is performed manually. In continuous deployment, the software is automatically deployed to the production environment, eliminating the need for manual intervention in the deployment process. These differences highlight the level of automation and human involvement in the deployment process between continuous delivery and continuous

deployment approaches in the DevOps lifecycle.

NEW QUESTION # 98

(CHK_4>2) Which TWO statements are NOT valid regarding the Oracle Cloud Infrastructure (OCI) Streaming service? (Choose two.)

- A. OCI Streaming stores all data for 24 hours by default, but that can be extended up to 7 days.B
- B. A stream can be configured with either a public or a private endpoint with support for customer managed encryption keys.
- C. Although OCI Streaming automatically encrypts all data while in transit, it is the developer's responsibility to encrypt data at rest, if needed.
- D. The throughput of a stream is defined by a partition. A partition provides 1 MB/sec data input and 2 MB/sec data output.
- E. OCI Streaming can support up to 2,000 requests per second to each partition.

Answer: B,E

Explanation:

The two statements that are NOT valid regarding the Oracle Cloud Infrastructure (OCI) Streaming service are: A stream can be configured with either a public or a private endpoint with support for customer managed encryption keys. This statement is not valid because the OCI Streaming service currently supports only private endpoints. Customer managed encryption keys are not currently supported for OCI Streaming. OCI Streaming can support up to 2,000 requests per second to each partition. This statement is not valid because the throughput of a stream is not defined by the partition in terms of requests per second. The throughput of a stream is defined in terms of data input and output rates. Each partition provides 1 MB/sec data input and 2 MB/sec data output, but it does not correspond to a specific number of requests per second. The other statements are valid: OCI Streaming stores all data for 24 hours by default, but that can be extended up to 7 days. Although OCI Streaming automatically encrypts all data while in transit, it is the developer's responsibility to encrypt data at rest, if needed.

NEW QUESTION # 99

Which of the following is defined as a configurable, low-latency infrastructure layer that controls the interaction between a network of microservices? (Choose the best answer.)

- A. Containers
- B. Kubernetes
- C. CI/CD Pipelines
- D. Service Mesh
- E. DevOps

Answer: D

Explanation:

The correct answer is "Service Mesh." A service mesh is a configurable, low-latency infrastructure layer that controls the interaction between a network of microservices. It provides functionalities such as service discovery, load balancing, traffic management, security, and observability for microservices-based applications. It is designed to improve communication and manage the complex interactions between services within a distributed system. Service mesh frameworks like Istio and Linkerd are commonly used to implement service mesh architecture.

NEW QUESTION # 100

You need to push a new Docker container image to a repository in the Oracle Cloud Infrastructure (OCI) Registry. Which mechanism must you use to provide authentication?

- A. Generate an Auth Token to complete the authentication via the OCI CLI.
- B. Generate an Auth Token to complete the authentication via the Docker CLI.
- C. Generate an API signing key to complete the authentication via the Docker CLI.
- D. Generate an API signing key to complete the authentication via the OCI CLI.

Answer: B

Explanation:

To push a new Docker container image to a repository in OCI Registry, you need to use an Auth Token to complete the

authentication via the Docker CLI. An Auth Token is a secure, auto-generated password that you can use to authenticate with OCI services such as OCI Registry. You can generate an Auth Token in the Console by following these steps:

In the top-right corner of the Console, open the Profile menu and then click User settings to view the details.

On the Auth Tokens page, click Generate Token.

Enter a friendly description for the auth token. Avoid entering confidential information.

Click Generate Token. The new auth token is displayed.

Copy the auth token immediately to a secure location from where you can retrieve it later, because you won't see the auth token again in the Console.

Close the Generate Token dialog. After generating an Auth Token, you need to log in to OCI Registry by entering docker login <region-key>.ocir.io in a terminal window on the client machine running Docker, where <region-key> corresponds to the key for the OCI Registry region you're using. When prompted for a username, enter your username in the format <tenancy-namespace>/<username>, where <tenancy-namespace> is the auto-generated Object Storage namespace string of your tenancy. When prompted for a password, enter the Auth Token you copied earlier.

NEW QUESTION # 101

.....

our 1Z0-1084-25 exam questions beckon exam candidates around the world with our attractive characters. Our experts made significant contribution to their excellence. So we can say bluntly that our 1Z0-1084-25 simulating exam is the best. Our effort in building the content of our 1Z0-1084-25 Study Materials lead to the development of learning guide and strengthen their perfection. To add up your interests and simplify some difficult points, our experts try their best to design our study material and help you understand the learning guide better.
