

Dump EAEP2201 Check, Latest EAEP2201 Test Practice

P.S. Free & New EAEP2201 dumps are available on Google Drive shared by ExamsReviews: <https://drive.google.com/open?id=19YF9UtIpw9PoSgxGCSxrQJn3giSrVC0S>

In order to save a lot of unnecessary trouble to users, we have completed our EAEP2201 study questions research and development of online learning platform, users do not need to download and install, only need your digital devices have a browser, can be done online operation of the EAEP2201 test guide. This kind of learning method is very convenient for the user, especially in the time of our fast pace to get EAEP2201 Certification. When using our EAEP2201 training materials, all the operations of the EAEP2201 learning material of can be applied perfectly.

Esri EAEP2201 (Enterprise Administration Professional 2201) Exam is a certification that validates the skills and knowledge of individuals in administering and managing ArcGIS Enterprise systems. Enterprise Administration Professional 2201 certification is designed for professionals who are responsible for the deployment, configuration, and maintenance of ArcGIS Enterprise systems in an organization. EAEP2201 exam covers topics such as installation, configuration, security, and performance tuning of ArcGIS Enterprise components.

Esri EAEP2201 Exam is a valuable certification for GIS professionals who want to demonstrate their expertise in enterprise GIS administration. EAEP2201 exam covers a wide range of topics related to managing and administering GIS systems, and passing the certification can help professionals advance in their careers and gain access to Esri's online resources and support.

Pass Guaranteed 2026 Esri EAEP2201: Pass-Sure Dump Enterprise Administration Professional 2201 Check

Using the EAEP2201 Study Materials, you will find that you can grasp the knowledge what you need in the exam in a short time. Because users only need to spend little hours on the EAEP2201 study materials, our learning materials will help users to learn all the difficulties of the test site, to help users pass the qualifying examination and obtain the qualification certificate. If you think that time is important to you, try our learning materials and it will save you a lot of time.

The Esri EAEP2201 Exam covers a range of topics including installation and configuration, security, high availability, performance and scalability, and disaster recovery. It is a comprehensive exam that requires candidates to have a deep understanding of the ArcGIS Enterprise platform and its various components.

Esri Enterprise Administration Professional 2201 Sample Questions (Q34-Q39):

NEW QUESTION # 34

A GIS administrator is architecting a new ArcGIS Enterprise deployment. The organization has grown and evolved since the initial deployment. The organization is having difficulty meeting the existing Service Level Agreement. Recently, the team rolled out a series of web tools that are used in various applications throughout the organization. In the existing deployment, users report poor performance when the web tools are used. Which action should the GIS administrator perform?

- A. Configure additional ArcGIS Server machines within the existing ArcGIS Server site
- **B. Dedicate an ArcGIS Server site for analysis to use workload separation**
- C. Install an additional ArcGIS Enterprise deployment for analysis workflows

Answer: B

Explanation:

Workload separation is a best practice in ArcGIS Enterprise architecture. By dedicating a separate ArcGIS Server site for analysis tasks, such as geoprocessing services used in web tools, system resources can be managed more effectively, and performance can be improved. This configuration avoids overloading a single site and ensures that interactive web applications are not affected by resource-intensive analysis tools.

Adding more machines to the same site (Option A) does not isolate workloads and may still result in contention. Installing an entirely new ArcGIS Enterprise deployment (Option C) increases complexity and administration effort unnecessarily. The recommended solution is to implement a dedicated ArcGIS Server site for analysis as part of a federated multi-site deployment.

NEW QUESTION # 35

A GIS analyst is running raster analysis in the ArcGIS Enterprise portal Map Viewer. The input data is an image layer, but the output of the raster analysis is a feature layer.

Which ArcGIS Server will host the output feature service?

- A. ArcGIS Raster Analytics Server site
- B. ArcGIS Hosting Server site
- **C. ArcGIS Image Hosting Server site**

Answer: C

NEW QUESTION # 36

ArcGIS Server is installed with its Web Adaptor on the same server. The configuration is as follows:

- * ArcGIS Server is federated with Portal for ArcGIS
 - * Portal is set up to use Integrated Windows Authentication
 - * The environment was set up using a domain certificate
 - * The attempted login account is a Windows account with admin privileges
- A GIS administrator tries to connect to ArcGIS Server Manager through ArcGIS Web Adaptor but the connection fails. Why did the connection fail?

- **A. The Web Adaptor was not set to allow administrative access to the server**
- B. The connection must be made with an internal admin account and not a Windows account
- C. The certificate must come from a valid Certificate Authority and not a Domain Certificate Authority

Answer: A

Explanation:

When using a Web Adaptor to access ArcGIS Server Manager, administrative access must be explicitly enabled during Web Adaptor configuration. If this setting is not enabled, even valid administrator accounts (including Windows accounts with elevated privileges) will be unable to access ArcGIS Server Manager via the Web Adaptor.

This is a common configuration oversight. The federation, IWA setup, and domain certificate are not the causes here. A domain certificate is valid within trusted enterprise networks, and Windows accounts can access services through IWA once configured correctly.

Reference Source: ArcGIS Enterprise documentation - Enabling administrative access for Web Adaptor

NEW QUESTION # 37

A GIS analyst creates a layer in ArcGIS Pro that must be published to the ArcGIS Enterprise portal as a web service that supports editing. The analyst does not have a connection to the ArcGIS Server where the service must be published.

What action should the analyst perform?

- **A. Upload the layer to the portal as a layer package file and add it to a web map**
- B. Change the privileges on their user role to allow publishing
- C. Create a service definition file to be published by a portal administrator

Answer: A

NEW QUESTION # 38

A GIS administrator uses a data connection file (SDE file) for a Microsoft SQL Server database to add a user-maintained data store item to Portal for ArcGIS.

Now, the administrator must ensure that five users can access the data store item to publish to federated servers. The administrator shares the SDE file with coworkers.

Which additional step must be taken?

- A. Upload the SDE file in Server Manager
- B. Give the coworkers a custom administrator role
- **C. Share the portal item to a group of the coworkers**
- D. Set the data store to public access

Answer: C

Explanation:

In ArcGIS Enterprise, data store items added via the Portal (such as those using .sde files for SQL Server) are represented as portal items. To allow other users to publish using that data store, the administrator must share the item with them, typically via a group.

From the official documentation:

"To allow other users to publish with a user-maintained data store, share the item with a group to which they belong. Users must have access to the data store item in the portal to publish services using it."

* Option A is not required—users don't need admin rights to publish.

* Option C refers to registering data in Server Manager, not managing access.

* Option D is not a valid setting for data store items.
