## 100% Pass SAP - Newest C\_S4TM\_2023 Learning Materials

The pass rate is 98% for C\_S4TM\_2023 training materials, and our exam materials have gained popularity in the international for its high pass rate. If you choose us, we can ensure that you can pass your exam just one time. In addition, C\_S4TM\_2023 exam dumps are high-quality, and you can use it with ease. You can obtain C\_S4TM\_2023 exam materials within ten minutes, and if you

don't receive, you can email to us, and we will solve this problem for you immediately. You can enjoy the free update for 365 days after purchasing, and the update version for C\_S4TM\_2023 Exam Braindumps will be sent to you automatically, you just need to exam your email and change your practicing ways according to the new changes.

## **SAP Certified Associate - SAP S/4HANA Cloud Private Edition - Transportation Management Sample Questions (Q41-Q46):**

### **NEW QUESTION # 41**

To which of the following can you assign a dimensional weight profile?

- A. Calculation base
- **B. Calculation profile**
- C. Charges profile
- D. Charge type

**Answer: B**

### **NEW QUESTION # 42**

For which of the following documents is it possible to do forward and backward scheduling in the transportation cockpit?

- A. Freight unit
- B. Forwarding order
- **C. Freight order**
- D. Sales order

**Answer: C**

### **NEW QUESTION # 43**

You want to use destination-based distance costs when planning freight orders with the VSR optimizer. What MUST you define?

- A. Planning strategy VSR\_DEF in the optimizer settings
- B. A freight unit building rule that does NOT use default routes
- **C. Costs for distance in the transportation lane**
- D. Costs for distance in the constraints and cost settings

**Answer: C**

Explanation:

To use destination-based distance costs when planning freight orders with the VSR (Vehicle Scheduling and Routing) optimizer in SAP S/4HANA Transportation Management, you must define costs for distance in the transportation lane (A). According to the SAP documentation, the transportation lane contains cost-related data, such as distance-based costs, which the VSR optimizer uses to calculate the optimal plan based on the distance between source and destination locations. This ensures that the optimizer considers the cost implications of the route.

The other options are incorrect:

\* Planning strategy VSR\_DEF (B) is a default strategy for the VSR optimizer but does not specifically address destination-based distance costs.

\* Costs for distance in the constraints and cost settings (C) are not a standard configuration area; costs are defined in transportation lanes or freight agreements.

\* A freight unit building rule that does NOT use default routes (D) affects freight unit creation, not the optimizer's cost calculations.
